Diamond NR72B; dual-band, 13.75" overall, NMO mount, and outperforms
quite a few taller antennas.

Not cheap, but well worth it. I normally use an MFJ-1412, (41" with
the NMO adapter) but carry the Diamond as a quite acceptable in-town
substitute when I know I'll be using parking garages, drive-thru
windows, etc.

I work in public safety and am looking for a simple handheld to carry while on the job. Must be in working condition, capable or alkaline or rechargeable batteries, and cover basic freqs (VHF low and high, 400MHz UHF; 800MHz nice but not needed). The more compact the better. Something along the lines of my PRO26 or 60 in size but I want something CHEAP in case it is lost or damaged. Thanks...

What I'm looking for is something with similar features to my Yupi MVT-7100, but with the ability to follow duplex channels (and preferably less problems with internally generated noise, the 7100 has more birdies than an aviary. :)

After two trips to radioshack for the right connector (I goofed and grabbed
the wrong one) glad I picked up the null modem adaptor just to make sure the
second time. Well get it working and dial out the 1900 and no answer after
several tries.
Well can't do anything about it tonight. I can't find any software that I can
buy and download. any idea's or just wait till I can call tomorrow? any idea's?
if so email me so I can get the answer soon the wife is waiting (G)

http://www.sfgate.com/cgi-bin/article.cgi?file=/chronicle/archive/2001/09/01/MN19935.DTL

Woman's bail cut in half in dog case
Knoller no more risk than Noel, judge says

Jaxon Van Derbeken, Chronicle Staff Writer Saturday, September 1, 2001

San Francisco -- In a surprise move, a San Francisco judge cut bail in half yesterday for a woman facing second-degree murder charges in the dog-mauling death of her neighbor.

Superior Court Judge James Warren reduced Marjorie Knoller's bail to $1 million from the $2 million originally set when she was jailed in March along with her husband, Robert Noel.

Warren said that while Knoller may be facing more serious charges than Noel -- who is still being held on $1 million bond on manslaughter charges -- she is no more of a risk to jump bail.

The ruling followed a daylong, often heated hearing in which prosecutors argued that the accused couple had strong ties to the "vile, vicious, murderous" Aryan Brotherhood prison gang. Warren kept details of prosecutors' accusations secret to avoid adding to pretrial publicity surrounding the case.

In arguing against cutting Knoller's bail, the prosecution also said that the couple are flight risks and that Knoller had done nothing to help Diane Whipple as she lay dying in her Pacific Heights apartment building after the dog attack.

The defense countered that the prosecution was "cruel" for suggesting that Knoller let Whipple die after the Jan. 26 attack by the Presa Canario dog that Noel and Knoller had

been keeping.

The defense stressed that both defendants had an unblemished reputation and strong ties to the community. Far from letting Whipple die, they said, Knoller had acted heroically.

In the end, Warren acknowledged prosecution arguments about the risks involved but ordered the bail reduced based on his theory of equal flight risk.

Prosecutors had no comment on the ruling, citing Warren's gag order in the case. But a private attorney suing the couple for wrongful death was puzzled by the decision.

"It doesn't make sense. . . . I don't understand it," said Michael Cardoza, who along with his client, Sharon Smith, attended the first part of the hearing.

It is unclear whether Knoller can raise even the reduced bail sum.

"I hope so," said Knoller's attorney, Nedra Ruiz, who added that she disagreed with the judge and said that bail of $1 million is "unnecessary" because of no flight risk.

"She's stunned; she feels she deserves release on her own recognizance," Ruiz said about her client's reaction.

At the hearing, Ruiz described Knoller as a "nice Jewish girl from Brooklyn" with ties to the community and no criminal record.

"There's nothing in this evidence to show she was anything but brave in the face of a tragedy that would strike most people speechless, that might dement a person," Ruiz told Warren.

Later she said Knoller "put her body on (Whipple) to protect her from this crazed, damned dog."

Prosecutor James Hammer bristled at the suggestion that Knoller valiantly fought to protect Whipple's life.

"If Marjorie Knoller's such a hero, why didn't she give first aid to Diane Whipple while she was dying?" Hammer said. "If Marjorie Knoller's such a hero, why didn't she call 911? And if Marjorie Knoller's such a hero, why did she go on national television and blame Diane Whipple for her own death?"

When he again stressed Knoller's failure to help Whipple, Knoller shouted, "I did too, you son of a bitch!" That brought a threat from the judge to remove her from court.

Much of the testimony in the hearing concerned the alleged ties the accused may have to the Aryan Brotherhood, in part through a Pelican Bay State Prison inmate they adopted.

The judge appeared to agree with the prosecution that there was cause for concern, saying, "The court does find that Aryan Brotherhood is a danger, that people are in danger and that witnesses in this case are in danger. . . . The Aryan Brotherhood is potentially a resource of some value to the defense."

He also noted prosecutors' argument on the couple's alleged flight risk. Prosecutors pointed out that the couple drove at high speeds while being followed by police after testifying before a grand jury that would later indict them.

That was not enough, however, for Warren to order Knoller's bail kept at $2 million.

1607. Re: scanners vs motorola radios

Newsgroup: rec.radio.scanner
Date: 2002-01-29 05:32:17 UTC
From: Charles Simmont <csimmont@yahoo.com>
Message-ID: <3C54E199.EA5CFF27@yahoo.com>
Source record: 53176

Scanners are designed to recieve a broad range of frequencies some go from 25mhz to 1.3Ghz (thats alot of space). Motorola and other brands of radios used by PD & etc are designed to only operate in a specific range on a peticular band. So the scanner is more versitile to scan a broader range as where the portable radio is tuned specificly to the frequencies that it is programed for.

Rob Taylor wrote:

> So why is it that when my scanner is right next to a Motorola MTS2000 radio,

Thats a funny one, almost as if it came from a hollywood movie. No there isn't anyway for a cop to tell if you have a scanner in your car (unless you have the mag mount antenna on your trunk of course). Be warned some states have laws reguarding having a scanner inside your vehicle and they can fine you for it. But no super scanner detection device on officer friendly's belt.

WiCkEd wrote:

"Richard",

I have to agree with you: ebay pricing is way out of whack. Buying new certainly makes sense compared to used prices for "classic" scanners.

As to the Pro93, I understand that not all of the channels can be alpha-tagged and some folks have compalained about buggy performance. Later models of the Pro92 get good reports, if alpha tags are important to you. Otherwise, the Uniden BC245 is certainly a reliable performer. I own a 2067 (mobile cousin to the Pro92) and a BC 245 and am happy with both.

Good shopping!

Back to the topic of RS, I can recall an odd scene I witnessed in a Radio Shack store in Cypress, Texas (a suburb of Houston). I was just looking around when a couple of guys came into the store and purchased all of the resistors they could of a certain size. It turned out that they were from Compaq -- a startup computer company (the year was 1984) -- and that they needed the resistors to complete a production run on time.

The clerk told me that the Compaq guys used to come into his store for parts all of the time.

Dick,
I'm sorry to say you should save both your time and money. I have a copy of this software. Full of bugs, just like a moggy summers evening under the lights in Flordia, you swat one bug and 5 more come to takes its place.

And the biggest problem I have with the software I have yet to get an answer to correct that problem. It starts up in this funny screen size regardless of the size it was in when it shut down. But that is only one of many problems I've had with the software.

I would have done a review of this product for my website (www.MilAirComms.com) but didn't want to run the risk of being labled such a negitive person :0)

alpha display

can take a card for ctcss search and input, card for delete tones,
bursts
and beeps, card for up to 4000 channels, card for decrambling speech
inversion.

has programmable scan - when to resume, listen for voice, sensitivity,

has all the modes am, sam, fm, cq, usb, lbb wfm, sfm
has all the programmable steps
has 2 vfo controls

this is a sensitive scanner with great selectivity

one of the best conventional scanners around - this is a professional
wide range receiver

has dc input, earphone, computer control

comes with car original car adapter, original wall adapter, rubberduck
antenna and ferrite rod antenna, batteries and manual. I cannot find
the
box.

This is a continious receiver - no gaps, pickup cellphones, military
fighter
jets etc.

MINT condition and express shipping included
475.00US

thanks
janet

I want to cancel the request for ScanPro after listening to the results of other users.Thank you all for the input.
I can't even get my scanner to even go into the remote mode.It shows the baud rate of 9600 and won't let me go into remote mode to read the scanner.I have a BC-895 XLT.
Any help is welcomed.

No I haven't bought the same unit as you, what you might need to check is
the settings under windows. I have installed a usb-serial adapter under xp
and the only way I could get it to work was to set baud rate to either 9600,
or 115200 baud, 1,8,none, and Hardware.
Regards,
Richard

Look, resonance isn't going to matter that much.

I'd just put an NMO mount in the roof. If you're willing to drill a hole. If not, then an NMO mag mount. Then get a Larson NMO 'base' that accepts a plain whip. These look like a thick 'coin' with a nipple in the middle that accepts a wire whip. There's a small setscrew in the side of the nipple.

Or you can get the 1/4" stud mount, with a short spring. Again, from a couple of sources, but Larson is easy to find at HAM shops. And again, cut the whip to whatever fits your garage or whatever.

Me? I'd use the NMO. However the 1/4" stud mount has a lot 'smaller' springs available. In fact, I think I have everything in a junk box except for
the stud body mount. I used it on a 'stud' type mag base from Larson for my 220 HT a number of years ago.

Then drive into your garage and cut the whip to the height that just barely clears your door or whatever, and it should work fine.

In my opinion, after doing some research, even as I like very much the brand UNIDEN and have heard (and experienced) bad things from some RS products (havent yet tried their scanners) I think the PRO-93 give you something that the bc245xlt JUST can give:

- More frequencies to explore
- Better sound
- 4AA batteries.

Just knowing that with a bc245xlt I wont have access to frequencies I could access with the PRO-93, in HANDHELD scanners right now, I think the choice is PRO-93.

I also bet that soon this year UNIDEN is going to bring us their newest handheld scanner with new technology who would definitely blow all the other handheld scanners. The PRO-93 is a 2001 model, the bc245xlt is a 1999 model. So as for the moment, is the PRO-93 reign.

1644. Help with BC-760 hysteresis mod

Newsgroup: rec.radio.scanner
Date: 2002-01-30 01:23:46 UTC
From: GORDON SMITH <kc2bw@att.net>
Message-ID: <3C574B4C.9A0AA67A@att.net>
Source record: 53113

I've been going over Bob Parnass' mod for reducing squelch hysteresis. My 760 has a (IC2) 3359da IC, but no 22k resistor. There are different values for two resistors located at either end of the IC. Which is R58? Also Bob says in the article that a higher value of resistance reduces the hysteresis, but the chart in the article says to go from 22k to 6.8k a lower value. Is this a mis print? My two manufacture codes are OKIB and OAIE. My friends Pro 2066 is out performing my two 760s in letting weak signals through the squelch and its starting to get to me! Thanks for any help.

Gordon

I have WinScan780 - save your money, buy something (anything) else.
POZILLA, are you noticing any TRENDS? Try supporting your product. Explain to people why your software generates illegal filenames when saving audio files. Put a patch up on your website. Answer e-mails. Hell, just issue a press release saying _something_. You think you can ignore any lack of repeat business, but word of mouth is going to _kill_ first-time buyers.

I kind of figured that (G) Ok I can program the frequencies in but I don't have
a clue about what to do with the trunk tracking I mean what order and are they
associated with the frequencies or what? ok here is a page
http://www.oregonlive.com/policescanner/index.ssf?/policescanner/police_codes.frame
no problem punching in the frequencies but how do I set them up in the trunking
mode and the talk groups?

Hmm, Canadian eh? Who makes it and where is it from? I'm a Canadian living in the US and if

that's in Canadian I should get it for real cheap in USD.

My notebook has no serial port. I have a Pro93 scanner and I need this cable

to work so I can upload to it. I can't do it all the time at my work computer.

I miss Alberta. I used to have a telusplanet account too...

You can bet they will be using digitally encripted radios. We are
going to the same thing on 400 MHz at the Kennedy
Space Center shortly. We are picking up new radios for our shop
this week. Many of the users are HAM radio operators and
scanner nuts. We are all bummed but the move is not our choice.

:-(

So ALL those wrecker drivers are in violation? Some of those guys have about 6 radios in their trucks, mounted. If they get arrested and their scanners confiscated, could we buy them at the police auction? Woohoo!

A faced a similar situation with a Chevy Astro van. I like the professional appearance of a permanent roof mount and wanted to use a 1/4 wave NMO antenna but did not have enough clearance on my 4 panel garage door. Even with a short spring, the constant folding of the antenna looked like a problem and the trim and weather stripping of the door would become damaged over time.

Instead I mounted a Diamond dual swivel bracket with an NMO mount (sorry don't have model number handy) on the rear tailgate. The bracket was about $65 I think and will swivel on both the x and y axis so you can adjust for the curvature of the door and make the antenna plumb. Ran the attached cable behing the interior trim panels up to the dash area. I parked the van with the tailgate under the door opening and mounted the antenna at the highest point that will still clear the door. My van has a metal rear door so no problem with the grounding screws on the mount. Is the Explorer metal?

The antenna I use is a black Larsen dual band 1/4 wave with a small black spring. For scanner use I also have a black Maxrad scanner antenna with a short spring. It is harder to find the black antennas and springs but my experience with the silver ones is that they become dirty is short time. The black is also less visible.

I looked into the previously mentioned on-glass mount antennas but my van has privacy glass and all manufacturers of these antennas advise against their use due to the metal coatings of the glass. I used cheap Radio Shack ones on a previous vehicle with poor restults.

The other point is to make sure that the antenna clears the operating garage door. If you mount the antenna to the rear of the vehicle, it may bind up as the door folds to go down.

Wish I had 5 or 6 panel garage doors like some of my neighbors.

Good luck and contact off line if you need any more info.

I am receiving the following 3 UHF systems in the Melbourne/Palm Bay,
Florida area. The data channels only
transmit a short burst of data. It sounds like it might be a water control
monitoring system or other type
of control system?

All 3 control channels are active at the same time with the same signal
strength. They all tranmsit continuously
and sound like Motorola trunked systems. The tone of the control channels is
slightly different from the Motorola
400 MHz Astro Trunked System used at the Kennedy Space Center.

Is there any way to figure out the base and offset frequencies from this
mess. If I can get them I
can probably break down the frequencies into three systems. I tried using
some of the standard base and
offset frequencies, but could not get it to track correctly.

Are there any scanners or PC-software for sale that can decode
dect-phone
conversation into voice audio?
I have read on the Internet that an old Motorola GSM-phone have
been used to decode (in servicmode)GSM-phone conversation,but I have
not found any closer information how to do it.
Grateful for more information.

True my friend, they are good radio's, but for the price, they just don't make the grade. As soon as I saw the PL antenna connector that was it for me, any receiver worth its salt would have either a N type or the more popular BNC

Have the re programed XTS 3500 radios (in non Digital mode)been sent out to the units in the field as of yet? and if so how are they working out now, compared to the sabers an mx's.

Also does anyone know what PL is being used (if any) for fireground use.

Thanks

>Well, that did it for me....

I must admit it took me SIX MONTHS to get a solution out of them, even
then the guy running it blamed his problems on everybody else, said he
was going to get rid of his staff and hire new folks, well that was 18
months ago - seems he still has the same problem... Oh yes, if enough
people complain, his wife announces to the world that he is seriously
ill in hospital and will not be able to answer emails for a while...

1674. For Sale: PRO-2004 with HB-232 Interface/many modifications $300 shipped

Newsgroup: rec.radio.scanner
Date: 2002-01-30 21:05:02 UTC
From: halligan@mediaone.net
Message-ID: <7490b6ed.0201301305.2ea6059e@posting.google.com>
Source record: 53143
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Greetings,

I have a Realistic PRO-2004 scanner for sale. The following info describes it's condition, modifications, accompanying HB232 Interface, included items, and payment method. If you are interested after reading this long-winded message, please contact me at kc1ua@scancapecod.net. Thanks.

Condition
---
1. Case is in good condition. Some minor scratches.
2. Display is in good shape. Not as bright as day #1 but doing well.
3. An analog signal meter has been mounted on the lower left front of the radio. This eliminates the earphone jack.
4. A blue keypad overlay has been placed over the original yellow keypad. This overlay shows a 400 channel plan instead of the 300 on the original yellow.
5. Radio does use a 9 volt battery as memory backup. Care must be taken to replace this battery. I would recommend twice a year.

Modifications
---
1. Full coverage restoration.
2. Removal of power transformer to reduce heat issues, facilitate HB-232 interface components, as well as toggle switches mentioned in #4 mod below.
3. 300 to 400 channel modification.
4. Modification that creates 64 independent "banks" of 400 channels each. Controlled by toggle switches on rear of radio. Diagram for operation is included.
5. Pushbutton switch on back of radio defeats keypad beep.
6. Discriminator tap (RCA jack).
7. Analog S-Meter mounted on front lower left. Eliminates earphone jack.
8. Radio did have problems with cold solder joints, which is common in this radio. They have been repaired.

HB-232 (a.k.a CE-232) Interface
---
1. Allows for computer control of PRO-2004 through supplied DOS software. Demo of Windows software is available for download from www.steaksandwich.com.
2. HB-232 Interface is mounted in a project box, 8" wide, 6" deep, and 3" high. Short DB25 connection from box to rear of PRO-2004. DB-9

connection from interface box to computer.
3. Supplied software is able to program radio and will display a "virtual" panel that controls radio's functions. Again, it is DOS based software. I would primarily recommend using it for programming/backup of memory banks. Many scripts that can make the HB-232 perform various functions are included.
4. It IS NOT imperative that you use this interface. The radio operates just fine standalone. However, it is included as part of the package for obvious reasons.

Included Items
---
1. Original manual.
2. Service manual.
3. Power supply is NOT included. You will need a 12V positive tip wall wort type supply. I would recommend one that handles about 1 AMP just to be on the safe side. I was powering the radio from a 12V power system in my shack. Transformer was removed as outlined above, so this radio DOES NOT have 120 VAC capability. Radio did not come with a wall wort type supply.
4. HB232 software and scripts burned on CD.
5. My support for your first days of operating this radio! I won't disappear on you.

Payment Method
---
1. $300. Will ship UPS Ground USA only on receipt of US POSTAL MONEY ORDER ONLY!
2. Shipping and insurance included in asking price.
3. I will provide you with a UPS tracking number when the radio is enroute.
4. Reason for selling - I am simply not using this setup any longer. It is sitting here doing nothing.

This is a unique setup. I would not recommend this setup for anyone looking for their first scanner, but the radio works fine as a standalone unit and/or with the HB-232 interface. Please contact me if you have any questions. I can provide you with photos if you would like them.

Thanks for reading this saga!

This guy has an updated CD of the no longer available Percon who stupidly went "pay-per-view". Bids start at $4.95 & it is taken from FCC data & much more accurate than the PoliceCall CD! Too bad Percon screwed all of us who used their CD's in the field! Pay-per-view SUCKS!

Check out:

http://cgi6.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=*voyager*&include=0&since=-1&sort=2&rows=25

Cut & paste if necessary & look for freq CD. I have the last Percon CD produced & this one as well.

I would like everyone if they can to send the following letter or something like it to your local radio and tv stations, or newspaper office, to try and get more services like this throughout the U.S. & Canada With alot of people in these groups, if we can spread this out a little bit throughout these 2 countries to the media. Then more interesting sites will pop up that have either alerts or online scanners through the media. I have been only able to catch my interest in a select few.

I would also like your thoughts on this. Does this sound like a corny idea or do you think a letter like this would have an effect on news editors or webmasters for these stations. email me at the following owner-livescanneraudio@yahoogroups.com

Here is the attached letter folks. Oh and once again, sorry for the cross post.

Randy

I have thought of a wonderful idea for your tv station and or newspaper. KTLA (Http://ktla.com) in L.A. California always broadcasts live police chases along with other live incidents, fires', standoffs, etc. Along with many other tv stations out there.

It would be nice to see your tv station or newspaper have this sort of action too. KTLA in L.A. Calif. is one of the top tv stations there.

If you mix that along with alerts to people via email and pagers and cell phone pagers, you can increase your audience. If you want to know a little bit about what I'm talking about you should visit these sites. http://www.incidentpage.net or Http://www.pursuitwatch.com , it would be however be a bit better if they were free services though.

I think doing something like this would certainly pick up more ratings or readers for your region. Another good point to would be providing live scanner audio on the website also such as http://www.policescanner.com , that would totally enhance the site as well as your tv station or media. If you look at our group http://groups.yahoo.com/group/livescanneraudio you can learn how to do this at NO COST to your station or paper. I would think that your news dept. already has a scanner in it.

I hope you take these ideas into consideration, as they would in my mind bring in more viewers and readers, I know that if a station locally would have this sort of action, I would become more of a viewer or reader or listener.
I would think that in a Metro area like yours and surrounding areas, there would be plenty of action going on. Many of the sites below, do have some

chit chat about different incident's that do take place in your region.

Thank you for your consideration,

one problem is. In Canada and the US. Both have a law about rebrodcasting transmissions. In Canada it is not illegal to listen to what you want. But it is illegal to rebroadcast the transmission. without 3rd party consent. rebroadcast in any form. phone, frequency wise. internet. I am not sure if you remember a user from Calgary Alberta got in huge trouble for it. It was within the last three years. But I forget when it was exactly. He was rebroadcast live on the internet, Ambulance transmissions. A employee from the Ambulance stumbled on his site. All Hell broke lose. He had many court appearances and fines.
It may be a fun thing to listen to. But with the laws. who knows. Then there is no privacy.

not listening to the whole thing. cause this thread is long enough. If you want to be anonymous. Why do you have your callsign as your username and email ? I wouldn't even think of using my callsign on a newsgroup. since the info is readily available of your name. address and location. but you are pretty poular on one site. Lookups: 934. my oh my.

1692. PRO-93 Hiss Sound

Newsgroup: rec.radio.scanner
Date: 2002-01-31 08:11:41 UTC
From: squirrelmaster@hushmail.com
Message-ID: <466f1411.0201310011.5dbcfdd8@posting.google.com>
Source record: 53061

I just got a PRO-93 and noticed that it emits a slight hiss sound (whith no signal received), is this normal? It's a bit annoying in a quiet environment.

Also the audio (while receiving a signal) seems to have more hiss in it as compared my PRO-43 scanner. The PRO-43 audio sounds better because of this.

Is all this normal or do I have a bad unit?

Thanks, SM

It is, simply and clearly, illegal in the USA for them to engage in the re-broadcasting of this material, under the communications act of 1934, which clearly states that you may not "divulge" what you hear to anyone. I would say that re-broadcasting this to hundreds or thousands of people is "divulging", on a large scale !

So you tell me then , how a company such as this advance.net, who owns a
few newspapers, doesn't get into trouble like this along with other
newspapers in the states. Now come an back this up will you. These
scanners have been on for a very long time now.

Hey 'Champ', I think you're on a short fuse fella. All I was trying to do was let people know how fraught with problems a scheme such as yours is. If anyone cares to check out a number of the 'affiliates' of advance.net, they will see that the cams & radio cover items like

- talkback radio
- ski cams
- radio shows
- music programs
- news reports
- etc.

I couldn't find any live cams/radio covering broadcasts by police, ambulance, fire services or any other utilities, and I suggest to you that the reason for this is as quite a few folks (including myself) have suggested; the legal ramifications are simply too onerous to contemplate such transmissions. If all that still fails to convince you of the fact that there are many problems associated with live utility broadcasts, then may I respectfully suggest you change your handle from 'Champ' to 'Chump', and ask your doctor for a script for some valium to tide you over your S.O.L.
Regards,

Ruff

Hi,

I have a BC 780XLT and I have Scancat SE edition software.

I'd like to set up the scanner and/or the software to scan all the bands where trunk systems might exist to learn what's out there. Is there a way to set the scanner (maybe using Scancat, maybe not) to scan through the bands and look for and log control channels?

If the scanner hears a control channel can it try all the different trunking modes it knows about to figure out what kind of control channel it hears?

Thanks,
John

Thanks Richard. I couldn't find any 'live' scanner transmissions as I don't know the US net setup very well, but even with the sites you gave me, still didn't manage one police broadcast, and only one Fire Department. However, they ARE there, and presumably are re-transmitting the signals of many police & other utility stations live, despite the risks involved (legal that is). Given the propensity for litigation that is so much part of the American way of life these days, I consider their decision courageous to say the least. Undoubtedly they have thoroughly investigated the legality of these broadcasts, and must have been given the green light, but still I confess my amazement at finding anyone who would do as they have done. I applaud their actions, which fly in the face of so many US 'hardliners' who are working tirelessly to remove what little 'freedom of the airways' still exist. I also agree with 'Champ' in that as many readers of this newsgroup as possible should be trying to encourage their local radio, television & net broadcasters to 'go with the flow' now that precedents have been set. Very little 'news' has the excitement factor of real time utility broadcasts, a fact that I'm sure could be communicated to many of the aforementioned organizations with little effort.
So strike while the iron is hot (read: utility re-broadcasting is still legal). It can only do immeasurable good to the hobby of scanning.

Check out: http://www.watchingthemwatchingus.com/

The site is currently being completed... but when finished it WILL feature live scanner broadcasts for much of the public service frequencies in Dakota County Minnesota.

The 1934 U.S. law everyone in this thread is talking about centers on divulging information contained in the transmissions (i.e. As if you or I were to tell someone about what WE heard). Here, the transmissions are being broadcast LIVE - and the contents are not being "divulged" to others. Granted a fine distinction - but one that I've been told by legal counsel can withstand legal interpretation.

We had an issue with Farmington MN who would not give us their 10-codes used in public radio transmissions under a request we made under MN Data Practices statutes. They claimed 10-codes were security information which is protected information. We say hog-wash and will post the 10-codes they use that we have knowledge of when the site opens.

One of the things we are fighting to protect in America is our freedom... and that includes public access to public data. Public service transmissions and the explanation of 10-codes used in those transmissions so the public can understand them is in our opinion essential to a free society.

One other note... in nearly every state in the U.S., it is illegal to have a radio capable of receiving police transmissions in a vehicle... UNLESS you are a licensed Amateur Radio Operator. So get your license and enjoy mobile scanning once you have checked the laws for your state.

Regards,
GS

Completely variable. There are several repair centers nationwide, some are fast, some are good, some are fast & good, some are slow & good and some are just slow. There is no reason to tolerate 6 weeks for a repair on their own product.They are limited in what they can do on a scanner anyway (they don't do much component level work, they change boards usually). Let then know you are not happy and ask for the District Manager's phone number. If that doesn't get it back for you right away, call the DM & ask for some action.

Are you ever dumb then if you can't search through a friggin site properly. Here are the scanners presented by the http://www.advance.net affiliates I am talking about. Also if you go to shoutcast.com and do a search for scanner, you will find many.

Here is my list:

http://www.al.com/huntsvillepolice/
http://www.cleveland.com/policescanner/
http://www.masslive.com/police/springfield/
http://www.masslive.com/police/holyoke/
http://www.nj.com/policescanner/
http://www.oregonlive.com/policescanner/
http://www.pennlive.com/policescanner/
http://www.silive.com/policescanner/
http://www.syracuse.com/police/

And other newspapers such as The Caller Times from Chorpus Christi Texas, they've got there scanner in the clear, and very interesting one I might add as well. http://www.caller2.com/multimedia/police/

And don't tell me that any of that are opposed the broadcasting and divulging crap that you mentioned haven't yet listened to the scanner broadcasts of the tragic WTC events. Your telling me you didn't listen to these for your enjoyment on the net. BS.

What about the numerous police and fire dept.'s that are putting there own communications on the net. Take http://www.Firedispatch.com for instance those are all done straight from the communication centres.

You know these are all out there broadcasting scanner signals, so just go with it and for god sakes people. When some posts something to these boards, can ya please stay on the topic of what is being asked rather than posting something not related to what's being asked of...

So again, to all you folks, I would like to ask you to get in touch with your local media affiliates and ask them all to put a live scanner feed online as well.

Thanks,

The best way to find control channels in your area is to use the FCC database at the FCC website. Search for freqs in your area, or do a radio service search for YB, this will yield trunks for you to try. You can do it the old fashioned way, by listening. By listening to control channels of known systems you will get an idea of what to listen for. You then can use the 780s control channel only feature to probe the system...this works for motorola only.

For what you want to do you need more expensive software. They sell a program for around 500.00US that will do it. Depending on where you live this may be worth it. If you live in a city with lots of trunk traffic and no one has done the job for you yet, you could publish your findings in a scanner guide and sell it to the local stores that sell scanners.....I live in Northern California and have done just that. Over the years I have sold about 2000 copies of the guide and that buys a lot of radio gear. I have kept it low key but now Radio Shack is interested in carrying them so I may be making a lot more, which in turn would pay for that trunking software!

Who said your hobby has to cost you money!

Here in San Diego there used to be several individuals and groups that
would periodically publish such information,
sadly, they have all gone to "coming out soon" status.

Several years ago I took a PRO-2005 to RS for repair. They first quoted $150 which I agreed to. I didn't hear anything for about a month and finally called them again. They said the estimate had increased to $250, which I declined, and asked them for the scanner back. After another month of waiting and a second phone call I finally got the scanner back in working shape! The store honestly told me one of their service center techs took it home thinking I wouldn't want it back. Apparently the tech fixed it for their own use and had to give it back when they learned I officially wanted it back. From how the conversation sounded, I think they fired him.

Source record: 53085

Like any real live auction I've attended over the years people get caught up in the fever pitch and sometimes bid way over what an item costs new. It's the same on e-bay. It's real fun to watch two bidders "duke it out " at the last min of an e-bay auction and pay much more that the item is really worth......but that's the pleasure of having the money, time.... As far as cell scanners I really believe they are old news so to speak, after all most cell systems are digital , yes some analog systems across the US. Unless you live in a rural area your chances of hearing both sides of the conversation after they switch cell sites is pretty remote. I just think listening to cell conversation is pretty much boring. But it is amazing what people will pay on e-bay.

1717. NYC Cops Creeped Out?

Newsgroup: rec.radio.scanner
Date: 2002-01-31 23:47:07 UTC
From: allbell@vnet.net
Message-ID: <41c36732.0201311547.671f6d@posting.google.com>
Source record: 53086

I bought a little Radio Shack scanner because the whole Sept. 11 thing freaked me out and I want to have some vague idea what's going on in my area.

I've noticed when I'm listening that the cops a) Sometimes say stuff like "Go to Channel 6," or "Call me on the phone," and b) "Don't use names on the air."

My understanding is that, if the cops, NSA, etc. really want to know whether I'm scanning, they can probably detect my scanner with the same sorts of trucks that detect unlicensed television sets in the United Kingdom.

Questions:

1) Is it likely, in the NYC area, that my scanner is ever the only one scanning, or are there so many scanners that mine is always one of many? I.e., am I freaking out the cops all by my little self, or are cops just conscious of the likelihood that dozens or hundreds of people are always listening in?

2) If my scanner is enough, all by itself, to freak out the cops, is there any way (like getting a license or something) to decrease the level of stress that my radio might cause?

1718. !FS: Uniden 895 XLT-Like New-Make Offer

Newsgroup: rec.radio.scanner
Date: 2002-02-01 00:08:45 UTC
From: sctreact@aol.com
Message-ID: <20020131190845.15961.00000843@mb-dh.aol.com>
Source record: 53087

I have a like new Uniden 895 XLT base/mobile scanner for sale.

Includes scanner and power supply. Scanner is in like new condition, never used mobile (not really used at all for that matter)

Just got the 780XLT and do not need the scanner anymore.

Make me an offer I can refuse!

Please reply via private email.

THANKS

-Peter

1719. Re: usb to serial seeking info for level 4

Newsgroup: rec.radio.scanner

I, too, needed more serial ports for radio control. This week,
I installed a CompUSA brand "PCI High Speed Serial and Parallel Port
Adapter" card in my computer. It adds 2 serial and one
parallel port. The local CompUSA store had several
of them in stock. At $29, it's a good deal.

The UPC code on the box label is "0 49696 10155 4." The box
and primitive instruction sheet
claim it requires Windows, but experimentation
shows it works both on Windows and Linux (kernel 2.4.9-121)
for me.

But your frequency list is the "official" one, and has numerous
omissions and outdated frequencies. For example, 121.375 has been THE
high-altitude frequency for south-central Wisconsin for many years,
but you won't find it in any list.

Well I guess it doesn't get any more "official" than that. Yes it is from the current FAA database

which they use. I just again checked and 121.375 is not in their database.

You say there are numerous "outdated frequencies". Please let me know of these. I'll then check the US IFR Supplement. It might not be that they are outdated, it might be that they just are not "normally" used but still in the ATC system and can be called into service at the "flip of a switch" when a high volume of airtraffic is present making them needed.

Police all over the country talk like that. It has nothing to do with you, NYC, 9/11 or anything. Ch6 is usually a simplex or talkaround from dispatch. They can talk about what they ate for lunch, talk about their coworkers or how good their girlfriend was in bed last night, and dispatch won't hear a thing. They also use cell phones a lot. Nothing wrong with that. They don't pay for it. They send a lot of e-mails back and forth with their MDT's in their cars.Cops have other things to worry about besides someone with a scanner. Your scanner is a radio receiver. It's not illegal to have. No one has the manpower or money or even the equipment to drive around to try to detect a radio someone might have.I can guarantee you 100% that there are no police agencies that have equipment to detect whether or not you have a scanner. I have a scanner. It covers from 88Mhz to 108Mhz in the FM band .No one tries to detect that one. Same with my 93.

2) If my scanner is enough, all by itself, to freak out the cops, is
> there any way (like getting a license or something) to decrease the
> level of stress that my radio might cause?

I have NO idea what your talking about. Sounds like 9/11 really freaked you out.

I have a question, because I'm having a problem.

1: Are you downloading to a scanner?
2: What's your OS?

You see, my notebook has no serial ports. I have a 93 I need to download to,
and am using XP. I've tried 2 usb/serial cables, none want to work for me.
Right now I have this cable http://www.pfranc.com/usb/usb.shtml and others
say it works for them, but not me. I'm at wits end trying to add a serial
port (or a reasonable facsimile) to my notebook and have it work properly.

I am controlling IC-R8500 and NRD-545 receivers
using tk8500 and tk545 software I wrote (available
on my web page).

I use RedHat Linux 7.2 about 95% of the time and Windows 98 second
edition the remaining 5%. The PC is a 1400 MHz AMD Althon
system with 1 GB RAM and 2 60 GB hard drives (plus CD-RW, CD,
mag tape, etc.)

A buddy had a Compaq laptop which did not have serial ports.
He found this so limiting for his radio
uses that he replaced it with serial port-equipped HP model.

As long as your laptop has a PCMCIA slot
you should be able to find some PCMCIA serial
adapters. I use one and it works perfectly.

David,

I have a 2067 I use mobile. You do not need a preamp as that radio is about as sensitive as a radio can get & not overload in a high signal environment. I have an excellent setup that works great for me & it is under $50.00. There is a commercial dualband antenna available from a guy in Louisiana that retails for ~$22.00. It is cut for 150/450 commercial bands & has 3dB gain on VHF & 5dB on UHF. He also sells 5" magnet mounts for ~$20.00 with 17' of coax & a soldered PL-259 connector. These antennas are every bit as good as the ones suggested by others but the quality & performance are superb! He is also on eBay & I will include his master listing URL so you can see the items I am talking about:

His name is Jerry AD5AQ
Email address is pixmann2@yahoo.com
Palmetto Antennas
1107 Gains Ave
Ruston, La 71270

His eBay Master Listing:
http://cgi6.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=pixmann&include=0&since=-1&sort=2&rows=25

You will not be disappointed. He sells an excellent antenna line. Tell him Rafman sent you! Enjoy!

>

First, let me make it clear that all of my information is from
listening, and not from a database. That means that what I know about
these frequencies is "voice verified"--I heard pilots acknowledge
hand-offs to them, and then checked to make sure they went to that
frequency. I alsdo used flight tracking to try to ascertain where the
remote transmitter might be in each case.

I should've been more clear. Your list had numerous omissions. And
outdated frequencies (not numerous outdated frequencies). Let's start
with some omissions. I have never seen any of them in the A/FDs or
Percon's listings or anybody's listings, for that matter, and I'm
really scratching my head as to why the FAA has never included them:

As I said, 121.375 is THE hot high-alt freq in these parts. Most
ORD-MSP traffic passes through it (MSP-ORD traffic is out of my range,

because it generally slides down the Mississippi and turns toward ORD near the WI/IL state line). Given the existing transmitter locations, 121.375 is almost certainly coming out of Horicon (between Milwaukee and Fond du Lac, WI).

135.975 is a hot freq that handles a lot of transcons plus traffic westbound from ORD. Therefore, the transmitter must be far enough west of ORD that ORD departures are already at high altitude, so my best guess is simply somewhere in Iowa (Dubuque, most likely).

126.275 also handles many transcons, and most be fairly near here (south central WI) because I hear handoffs from Horicon transmitters to 126.275.

127.625 I've voice-verified as a ZAU freq, but I don't hear enough on it to get a good sense of where it might be.

127.675 gets eastbound traffic handed off from this area, so I'm guessing it might be a Grand Rapids transmitter.

The number-one outdated freq on your list would have to be 135.35, listed as a South Bend transmitter. That used to be quite hot for transcons, but I haven't heasrd anything on it in many years, not even when I passed through South Bend!

Now, here's a couple of mysteries I hope someone can solve.
128.5 (a lo-alt channel transmitting at Pullman in western MI) used to be THE channel that served as the funnel for westbound traffic inbound to ORD. I still receive 128.5 just fine, but that ORD traffic seems to have gone elsewhere. Try as I might, I haven't heard a hand-off that would reveal where. For example, most of the traffic from Europe comes in over the northern tip of lower MI, and slides down the west coast of MI. While I can hear Tony and the Alitalians just fine at high altitudes over the northern tip, I've never been able to catch what channel they're handed to as they descend to ORD (the channel just before they're in ORD's TRACON).

On the west side of ORD, I used to hear traffic coming in over Janesville, WI, with instructions to cross the Crenna intersection (NW of ORD) at 10,000. This was on 134.2, but now seems to have gone elsewhere as well.

I'm hoping some Chicago-area air traffic listeners might be able to solve these two mysteries.

Oshkosh Gerry

I've got 121.375 programmed in as Horicon. I've heard them a few times
- can't remember though what list I picked it up from.

134.2 is supposed to be Hampshire, IL.

Anyone had any dealing with these people? I placed an order for an antenna over a week ago, my order hasn't been processed, they
won't respond to my emails, and I can't cancel my order via the site, just send an unhappy letter to their admin.

You might have picked up the 121.375 listing frome me. I once posted it here as a part of my set of freqs for folks attending EAA. But it isn't in any FAA list that I know of.

Yes, 134.2 is Hampshire, which is a logical place for a transmitter controlling traffic being given instructions for crossoing the Crenna intersection. My point is that I don't hear that traffic on 134.2 any more.

Are you located in the Chicago area Greg?

Could this be the confusion: My list is ONLY ARTCC (Center) frequencies. My list

does not (nor was it intended to) include TRACON, Approach, Departure,
or Tower freqs.

I'm wondering, are you sure 121.375 and 135.975 aren't part of someones
TRACON system? If so that would explain why it not in the FAA's
database of ARTCC freqs.

I also do not understand this need to listen to cell phone calls. A few minutes of listening to cordless phones on 49mhz was enough to bore me to death. Now of course if you are trying to do something less than straight I guess you might want to know if the cops are coming or if your husband/wife is treating the mailperson to a afternoon break....

Only from a limited distance. Yes, your scanner is detectable if
you're looking for one on the air, but you almost have to be within a
few hundred feet to see the signal.

>1) Is it likely, in the NYC area, that my scanner is ever the only one
>scanning, or are there so many scanners that mine is always one of
>many? I.e., am I freaking out the cops all by my little self, or are
>cops just conscious of the likelihood that dozens or hundreds of
>people are always listening in?

They don't know how many are listening in. One thing is certain: if a
media hack hears some interesting traffic, they'll investigate. They
listen, even if they don't always admit it.

>2) If my scanner is enough, all by itself, to freak out the cops, is
>there any way (like getting a license or something) to decrease the
>level of stress that my radio might cause?

hee hee hee, you so funny.

Laws of nature concerning radio:

1) What you say on the air is public.

2) You're free to speak in whatever codes or ciphers you care to use,
however, you have assurances that you won't have someone cracking your
codes, modulation, or ciphers. If in doubt, remember law 1.

3) Mother nature doesn't give a hoot what legislation our societies
make. See law number 1.

Yeah, with the advent of cheaper Digital PCS phones the cell phone band
on 800mhz is not what it used to be. It used to be non-stop hits but
now I can scan thru most of the band and only hit a couple (3 or 4).

If you do get a PCR-100 then you must download TalkPCR this is the
software ICOM should bundle with the unit! It does everything the icom
software does and does it better and faster. It also adds some features
not found with the icom software. Good Stuff!

Not only that, but they sell antennas which can only be said
to operate by voodoo, certainly not physics or electronic
principles. I would highly advise anyone to pull out a copy
of the ARRL handbook and read a little bit, then go back
and look at this junk based on a little knowledge gained
from the book. Engineers who have looked at that opening
page must be rolling on the floor laughing.

>George
>http://www.MilAirComms.com

No, they are definitely ARTCC freqs. Now check this out:

http://www.carmachicago.com/center.txt

It's from the Chicago Area RMA, and it lists 3 of the mystery freqs
I've mentioned! 121.375 is indeed listed as Horicon (as I suspected),
135.975 is listed as a super high freq transmitting from Cedar Rapids
(I guessed Iowa), and 127.625 is the "new" South Bend hi-alt freq that
replaced the dead 135.35 in your list. All of these have been in use
for as many as 10 years, yet have never appeared in FAA lists. That
leads to two questions: why doesn't the FAA have complete, up to date
lists, and what was the source for the CARMA list? I'm going to seek

an answer to the second question.

Of course, that leaves three other mystery freqs. They are definitely ARTCC (I couldn't hear them otherwise--we're talking about planes at FL 310 or higher in general, and I'm picking them up with just a built-in antenna on a Bearcat 890 in Oshkosh).

Anyway, my word and the CARMA list ought to convince you not to put too much faith in FAA lists--I've never found them to be more than 80-90% accurate.

Oshkosh Gerry

I personally would never do business with them, too many negative stories I have heard at the local "outlaw CB shop" as well as on the 'net. Since they specialize in quasi-legal items and blatantly sell to unlicensed amateurs without pause for thought, it should make one question their integrity to begin with.

If you paid by credit card, advise the credit card company & refuse delivery. As part of customer service, they can't charge your card unless they have shipped the product & must accept cancellations as part of their credit card contract. If you then refuse delivery, you are covered. Too bad you ordered from this vendor. They are very famous for greed without response!

Good Luck!

Thanks for your response.

I understand that, in the old days, it might have been hard to detect consumer police-band scanners, but is that really true today? Example: See this 1998 UK TV detector trucks: http://groups.google.com/groups?q=trucks+detect+group:rec.radio.scanner+group:rec.radio.scanner&hl=en&scoring=d&selm=3530ef34.1376063%40news.usit.net&rnum=6

Is the stuff the scanner gives off correlated with the frequencies it's scanning? If so, and if it was possible in 1998 for the UK to pick out TV receivers, which are extremely common, it seems bizarre to think that the FBI can't pick out the one in 500 households that has a police scanner. I guess what you're really saying here is that, of course, the government can physically detect my scanner, but won't bother because it has better things to do. But I still think the cops or whoever on the radio sometimes sound as if they've received some kind of specific warnings about scanning, not just that they're following routine security procedures.

> their cars.Cops have other things to worry about besides someone with a

Frequency counters escalate in cost exponentially based on how weak a
signal they can lock on and how fast they can lock on. TV's are relatively easy
to detect because they stay on a frequency for minutes to hours at a time. A
newer scanner is going through dozens of channels a second and stopping on
random ones for at most a few seconds at a time. The local oscillator (which is
what the receiver hunters look for) in a scanner is weaker and quite often much
better physically shielded & better isolated from the antenna than the one in a
TV. It would take much more expensive equipment and personell to hunt down
scanners than it does to hunt down TV's.
TVs are harder to find now than in the days of tubes (the local oscillator
in some of the early tube tuners put out upwards of half a watt of RF!), but
not nearly so hard as scanners. Given the proliferation of signals leaking out
of everything digital, wireless this and that in every house & just hash and
noise, they'd have to want to find scaner users pretty badly to spend the
money and effort to do it.

The 250D handheld is supposed to have the same features.

1776. Has anybody done this mod? Pro-2006 s-meter ?

Newsgroup: rec.radio.scanner
Date: 2002-02-02 00:36:35 UTC
From: sky444@mint.net
Message-ID: <3c5b3454.235180972@news.mint.net>
Source record: 53045

Parts:
10Kohm 1/8w resistor, 0.1 uf capacitor

Locate D33 on the linear PCB. Solder in the 10K resistor to the ANODE of this diode. Note this is not the same as TP2. Connect a wire from the free end of this resistor to a rear panel jack (RCA). Solder the 0.1uf capacitor from the jack's center terminal to ground. Output on this jack follows the AGC voltage. Negative for no signal, goes positive when a signal is present, increasing with signal strength. A 1Volt full scale panel meter makes a good "S" meter

has anyone tried to do this particular mod to the 2006?I am curious as to if it worked and how well.The mod says to hook the resistor up to the RCA jack but where,in the center or on the lug that's off to the side.that comes off the jack?am wondering if the 9 volt battery ground would be sufficient,I tried it myself but I get a steady signal on the meter and sometimes it goes up when it "hits" but the stronger signals go backwards??if that ground is wrong can anyone tell me where would be the best place to ground the capacitor? also it states D33 is not the same as TP2,is D33 actually on the bottom of the pc board or ??any help appreciated from an "expert" that has done this mod to thier own 2006!!

Thanks in Advance,Tom

Oh my. are you still in the 1900's. Damn it is now 2002. What does the war have to do with it. You seem like a teeny weeny OLD man that is a pervert, that is racist & cannot leave the past alone. You seem to be blaming everyone for the war and your mistakes. Get over it. It is 2002 now. You probably think that the world was going to end in 2000. There may still be racism now. Like you. But most accept other races and other mistakes. Oh well. You can live in the past and look at your girly porn. Ut, or is it boy porn. But you are too funny to listen to and I love laughing at trolls that want to argue. Atleast I am not getting bent out of shape over your whining.

If I'm not mistaken, FCC preempted the laws of states who prohibited the
mobile installations
if you have a ham license. This was because some states became a bit
overzealous and started
seizing ham VHF/UHF rigs, not because they necessarily had polices
frequencies in them, but
because they could scan. Not kosher!

What if what is now the 800 MHz cellular band is reallocated for some other use in the future. After all it used to be the high end of UHF TV.
Maybe it might be used for garage door opener frequencies, now that is some great listening.

>
> Oshkosh Gerry

These freqs are on the CARMA list because someone living in the area heard them and listed them. I'm located in Daytona Beach, FL and have no way to actually monitor ARTCC freqs in Chicago. Therefore to put together this list I needed to rely on the available information which was not copyright (or the Bob Grove Klan would be down my neck).

In short I still feel that is probably the most accurate list which contains all 20 CONUS US ARTCC Center areas. And from the vast amounts of email I've received it appears that the project was of great help to many people.

Only a self-righteous ham radio moron would say such an ignorant thing in
public. It figures you are an admitted career politician as you have
described in your bio on http://www.qrz.com under N9NWO. Nothing can be
further from the truth. Maybe you have such a stupid law in the People's
Republik of Indiana but the other states' residents are free to use one
wherever they damn well please! Next time you preach rules & laws, it might
be helpful to read them first!

Again, WRONG. The idiots at Icom, out of fear for Federal Government intervention, deleted the FM-TV feature on the R-3. This was discussed on this newsgroup & on Strong Signals. Icom is paranoid of politicians' products of love crafted for a perfect police state!

I suspect you might like such laws since you seem to think they exist everywhere in the US. Just like only 6 states have restrictive scanner laws, you are wrong, wrong, wrong. Hams like you give all of us a bad name for being arrogant know-it-alls without a clue OB!

> :This is just out of fun. ;)

No, this is the joke, YOU N9NWO

Don't let the paranoia bug bite you. Chill out and stop worrying about
it. Honestly.

> Questions:
>
> 1) Is it likely, in the NYC area, that my scanner is ever the only one
> scanning, or are there so many scanners that mine is always one of
> many?

Your's is one of MANY. Paranoia is not needed in this case.

>I.e., am I freaking out the cops all by my little self, or are
> cops just conscious of the likelihood that dozens or hundreds of
> people are always listening in?

Simply put the cops know people listen to scanners and don't want to
take chance giving out certain things over the air. Some criminals use
scanners too you know. It is not illegal to listen to the police on a
scanner, unless you are doing it mobile, it IS illegal in some states to
have a scanner in your automobile.

> 2) If my scanner is enough, all by itself, to freak out the cops, is
> there any way (like getting a license or something) to decrease the
> level of stress that my radio might cause?

No.

I'm looking for feedback on this hand held from
those that have used it. It seems from what i've
read that it's built great and has a ton of really cool
features. Some say it performs pretty well along
the HF bands for what it is. From looking at the specs
and reading Bob Parnass's review in the June 2001 MT
my only concern is the sensitivity 900Mhz and greater,
it really looks to drop off.

I'm debating whether to buy the ~ $500 DJ-X2000 or go for the current
bargian Icom R2 ~$150 (on sale and Icom is offering a coupon for free PC
cable and S/W) .

Anybody regret buying it ?

Thanks

I wasn't trying to detract from your effort--I really appreciated it.

You're wrong about where those freqs came from, though. According to the CARMA webmaster, they came direct from Chicago ARTCC. So how do you like that--the center hands out a slightly different set of frequencies than the FAA lists for the center on its FTP site. I wonder why, or is it just the usual governmental malfunctioning....
Oshkosh Gerry

All I can say is that if I had the money, I would get a DJ-X2000, BUT ONLY because the AOR 8200 MKII costs more. I would personally NOT compare the DJ-X2000 with the R-10. The R-10 is a really good, but also really funky radio. It's super-small with a speaker that probably came from headphones(exaggerating of course), and it's really slow.

The DJ-X2000 is supposedly a "little" faster than the R-10. Simply put buy the DJ-X2000 ONLY if you want a LOT more from your scanner than what the R-10 offers, you don't care for "mini" scanners and like the idea of "all in one" products.

Just as an additional thought, the vans mentioned in England are
economically feasible because the British government licenses TV sets. (Or
used to, anyway.) The vans paid for themselves in increased licensing fees
and fines. That economic incentive doesn't exist in the U.S.

It's here! ScanIn7!

Through hard negotiations and the greasing of several palms, ScanAtlanta will be having ScanIn7 (SI7) on SATURDAY FEBRUARY 23rd at 10:00 AM at WGCL TV-46!

Richard Marlar has graciously worked out the details for us to take the $5.98 grand tour of the station. I've been there, and believe you me, there is lots of goodies there to see!

MARK YOUR CALENDARS! SATURDAY, FEBRUARY 23rd AT 1000 AM at WGCL TV-46.

The address is 425 14th St., N.W., at the corner of 14th Street and Mecaslin, across from the mosque.

We will either have lunch next door at Bob and Junes, the Varsity or Silver Skillet!

I'll post a map for those who need it on the ScanAtlanta Website in the next day or two.

Please stop. Your killing me...LOL...calm down and take a valium.

I can tell you that EVERYONE in American law enforcement today is being careful what they say on the air, in the clear. It is not anything new, it is just being more emphasized nowadays. Within a 10 block radius of any part of NYC, there would most likely be about 50 different types of VHF/UHF transceivers (Taxi's/NYPD/FDNY/Cell Towers, etc..) all turned on and radiating small amounts of RF.

P.S. Don't believe everything you hear about detection sniffers, these are very sophisticated, delicate, sensitive devices that would not be used to search city blocks for law abiding citizens using legal scanner radios. LOL you are very funny! |-)

US dollar to German Deutch Mark is 88=200. That seems pretty strong but I am no world traveller... If he waits to go to Germany, it may cost him less due to the fact of US import taxes and other FCC costs to have the unit comply and paperwork filed. This adds to the US end cost doesn't it?

Having a full freq radio never hurt in if you ever decided to get out of the hobby.

well. all depends.
If you can answer a few questions. that may help.

1) about what frequency range does it happen on ?

2) is it a handheld scanner or a base ? this doesn't really matter.

3) are you using a internal antenna. or external ? external meaning do you have your scanner hooked up to a outside antenna. or do you use a rubber ducky or something connected to your scanner in the house.

4) is it by a computer, monitor or a hub. Newer Hubs have been giving off bad RF lately ?

5) Give more detail. Location, Antenna, Frequency area.

If you use a rubber ducky or a telescopic antenna in the house. you will or may get popping sounds especcially between 43 - 49 Mhz. and 137 - 150 Mhz. I am speaking on Canadian RF though. If it is below 29. It could be a few things. If you don't get any RFI above 400 Mhz. then it is something around you or your vehicle.
Not all of us are rude. Most of us will help you too :).

I found a strange frequency last night scanning the 900 MHz band in all my years of scanning have never heard. Does anyone know what this is?

It was at 947.7500 and had a continuous carrier with what sounded like a 1.5Khz to 2KHz beep every 5 seconds or so that maybe had a duration of .5 seconds. Not a very strong signal but went on for hours...

This was not a repeater or like anything I have ever heard before. If I hear it again I will record it for reference. Checking the frequency this morning I have the continuous carrier but no tone, it's kind of like an open mic but no background noise heard.

Eric

What is the best outdoor base scanner antenna??? I used a RS all band groundplane for years and the recent ice storm took it out..Can anyone recommend anything?? Must be able to receive 25-1300MHz..Thanks!

You might want to look at the review I did on the Antenna Warehouse
Scanner Beam at http://www.milaircomms.com/review_scanner_beam.html

I have one and it made a world of difference over other antennas I've
used included a discone.

First, there are no scanner licenses in the US. Not for receivers. There are some special considerations for licensed hams possessing scanners in cars, but there are no specific licenses for scanning receivers.

Second, the technology for detecting receivers has been around for decades. And not just in the UK. In the US, it was used commercially by a company called Audiscan, which was, in fact, an alternative ratings service for radio, which claimed to be more accurate than Arbitron. There was also a TV service, called Vidiscan, that didn't last very long at all. Audiscan would park a car, or a van at a busy intersection, and point what looked like a radar gun at a passing lane of traffic. This device would key on the LO of the car's radio, and Audiscan claimed that they could read the actual frequency of the station currently being listened to. This, of course assumed that all car radios used the same IF, and that there were no other frequencies being generated by either the radio, or other systems in the cars. With as many frequencies that are generated by multiple digital systems in cars, today, this type of system is pretty useless today.

Audiscan never really caught on.

Vidiscan was similar, with the same kind of device being driven through residential neighborhoods, keying on LO radiations from TV sets in use. Helicopters were experimented with for a while, too. Vidiscan was a miserable failure.

So this kind of technology is actually pretty accessible. If the authorities want to know that you're listening to a scanner, they have easy access to the technology that can detect it. It's the same type of technology used in the VG-2 radar detector detector that's in use around the country.

However, it's perfectly legal to use a wideband or scanning receiver in this country. At least until Billy Tauzin finds away to snuff that out, too. And given the various and multiple conversion modes in use by manufactureres of widebands or scanners, it's difficult, from the street, reading LO radiations, to determine whether an occupant of a residence is using a wideband scanner, or any one of a number of other radio devices, all legal, most of which have nothing to do with police frequencies.

So, the answer to your question is, yes, the technology exists to detect your radio, and yes the police and other enforcement agencies have access to it (and likely have it in-house for ready use), but no, you're not freaking them out. What you hear is the caution of anyone who realizes that they're on a generally accessible frequency, and discretion is the better part of avoiding trouble.

Interesting that cell phone users can't remember that...and that we need laws banning access to these frequencies so cell phone users can live in ignorant bliss.

1808. OS-456

Newsgroup: rec.radio.scanner

Before I spend the money on an Optoelectronics OS-456 Lite, does anyone know of an OS-456 for sale (or one they have that they'd be willing to part with) for a reasonable price?

I've been looking on eBay and hamfests for over a year, and you can find plenty with the scanner already attached. I have the scanner, and don't really want another.

Thanks.

I have one Diamond Discone antenna in good condition for sale. It is designed for 25-2,000 mhz. operation and takes a PL259 male connector. It was one of 3 I removed from my tower because they were mounted on crossbars and negatively impacted my tower wind loading parameters. I have sold two of three antennas. By design discones are broadband but have very little gain. Therefore a RF preamp should be used. I use the Radio Shack VHF/FM/UHF mast mounted preamp and it works great. Since I am not transmitting on the discones, I use RG-6 coax. The Diamond discone is $65 plus shipping. If anyone is interested contact me at <jwilson9@erols.com> ASAP. My area's annual hamfest is 09 Feb 02 and I have two tables for selling a bunch of stuff and this will be one of the items taken to sell.

Exactly my point Dick. How do these people expect to sell there scanners and don't put the price on them.

Maybe we are expected to beg for the numbers. They can keep them, I don't need another scanner that bad.

While scanning at a dirt track auto race, one of the officials started
to get hot under the collar after an incident. He was just on the
edge of using some of the Seven Words when another official said
something like "Stay cool. We've got a thousand folks in the stands
with scanners."

> Interesting that cell phone users can't remember that...and that

The average cell phone user does not have the situation awareness of
the average dirt track flagman. :-)

yeah, i had an experience like that here in allentown, pa...listening
to the scanner one night, i heard the cops catch a serial killer. guy
had raped and killed several women, and the cops had stationed a cop
at the house of one woman who this guy had visited several times.
about 1:30 AM i hear the cop screaming into his radio that he's in a
gun fight with the guy...next thing i hear the cop huffing and puffing
as he chases the guy down the street...the area was staturated with
cops and they had little problem nailing the guy...

one of the funniest experiences i had was listening to the airport
cops at the big(!) airport here...a drug running plane had planned to
land at a very small local airport and fill up with gas...they
mistakenly landed at the big airport without clearance, since the
small airport's control tower closed at sundown...boy, were THEY
surprised!

Amateur Radio Newsline™ Report 1277 – February 1, 2002

Amateur Radio Newsline report number 1277 with a release date of Friday, February 1st, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The President of the United States speaks to hams in Florida and is ham radio seeing a second Solar Max? These stoies are first on amateur Radio Newsline report number 1277 coming your way right now.

(Billboard Cart Here)

**

BREAKING NEWS: PRESIDENT BUSH COMES TO HAM RADIO

The President of the United States has come to ham radio. Bill Burnett, KT4SB, has the details:

--

President George W. Bush has taken to the ham radio airwaves. This, to thank the Florida Amateur Radio community for being ready to serve the public when it is needed.

The President’s comments were made during a stopover the morning of January 31st at the Volusia County Fire Services and Training Center near Daytona. Around 9:15 AM Eastern Time, President Bush checked in to the Northern Florida Amateur Radio Emergency Service Net on 3.950 MHz using a portable station set up John Schmidt, AF4PU. Then the President made these remarks to the 40 or so stations listening to the net:

--

President George W. Bush:

"I want to thank all the volunteers who help make sure that Florida is prepared for any kind of emergency. I also want to assure you that your Federal government is doing everything we can to make sure that there is not an emergency--starting with unleashing the mighty U.S. military overseas to bring evil ones to justice. But should there be a need for a response, I want to thank you all for helping our communities be prepared. And finally, I want to tell you--we are lucky to be Americans and may God continue to bless this great land of ours. Thank you very much."

--

Needless to say the net members were delighted to have the President of the United States address them. More important, hams nationwide can now be sure that President Bush knows that Amateur Radio operators are ready to serve whenever he, and the nation, needs to call on them for help.

In Miami, I’m Bill Burnett, KT4SB, reporting for the Amateur Radio Newsline.

--

The complete story is on the web at
http://firstcoastcommunity.jacksonville.com/northfloridaamateurradiosocietynofars (Tnx NU4F, CQ Magazine)

HAM RADIO SCIENCE: TWO SOLAR MAXIMUMS THIS SEASON

In case you are wondering why the current solar cycle is still providing such amazing VHF and UHF DX, one researcher may have the answer. He says that the current cycle appears to be having a second peak and that this is really not very unusual. Henry Feinberg, K2SSQ, looks at the scientist and his latest data.

--

The most recent and ongoing Solar Maximum -- or Solar Max -- theoretically crested in mid-2000. Sunspot counts were higher than they had been in 10 years, and solar activity was intense. One remarkable eruption on July 14, 2000 caused brilliant auroras as far south as Texas. But after that, sunspot counts slowly declined and the Sun was relatively quiet for month-long stretches. Most scientists said that the Solar Max was over. But was it?

Now, as 2002 unfolds, the National Aeronautics and Space Administrations solar foorecasters say that it looks as if the Solar Max is back with us again. The Sun is again peppered with spots, eruptions are frequent and hams notice that the VHF DX keeps rolling in.

Why is this happening? Well David Hathaway, a solar physicist at the NASA Marshall Space Flight Center in Huntsville Alabama has one theory. Hathaway says that the current solar cycle appears to be double-peaked, and the second peak has arrived.

--
Hathaway Audio Here
In-Q: We have seen other cycles...
Out-Q: ...define this maximum
--

Scientists track solar cycles by counting sunspots and Hathaway is an expert forecaster of sunspot numbers. He says that sunspot counts peaked in 2000 some months earlier than we expected. He says that the subsequent dip toward solar minimum seemed premature and before long, sunspot counts reversed course and began to climb toward a second maximum that now appears to be only a few percent smaller than the first.

--
Hathaway Audio Here
In-Q: Its a bigger than average...
Out-Q: ...smaler than 19, 21 and 22.
--

Hathaway notes that there is a widespread misconception that solar activity varies every eleven years like a pure sinusoidal wave. It isn't. He says that solar activity is chaotic and there can be more than one peak in any given period. Translated for ham radio: Enjoy the VHF DX while you can.

For the Amateur Radio Newsline, Henry Feinberg, K2SSQ.

--

Hathaway says that the Solar Max eleven years ago was much the same as this one. The first peak arrived in mid-1989 followed by a smaller maximum in early 1991. And if you are interested in hearing more about this interesting phenomena from David Hathaway its as easy as taking your web browser over to www.rainreport.com. Or you can call on the phone to area code 847-827-7246. (NASA, RAIN)

**

HAM RADIO IN SPACE: HF ANTENNA INSTALLED ON ISS

High Frequency ham radio operations from the International Space Station could be on the not to distant horizon. This, after a successful space walk on January 25th to install another antenna on the orbiting outpost. Amateur Radio Newsline's Roy Neal, K-6-D-U-E, has the details.

--

The spacewalkers have had another good day in space. On Friday the 25th of January, Cosmonaut Yuri Onufrienko, RK3DUO and Astronaut Dan Bursch, KD5PNU, successfully mounted a second ham radio antenna near a docking port amidships on the International Space Station. It is made of flexible tape and is similar to but longer than another antenna installed on January 14th. That one tunes both VHF and UHF frequencies. The new antenna will tune HF frequencies.

ARISS Board Chairman Fran Bauer, KA3HDO, says it definitely will work on ten meters and may even be made to work on 15 and 20 meters. BUT right now there is no gear on board to handle those frequencies. Experiments using the lower frequencies are on the list of futures for ARISS but no timetable has been assigned to design and build them.

Owen Garriott, W5LFL, the first man to operate ham equipment in space, once prophesied that a five watt transmitter in orbit might well be heard simultaneously world wide. The great number of hams with good stations on the lower frequencies also makes them enticing to ARISS. It's a safe bet that serious consideration now is being given to expedite such a project. Once a station is sent up, the antenna will be waiting.

The new antenna is the second of four to be installed on board the space station. No timetable has been announced for the final installation. All of

these amateur antennas were built by Italy, tested and qualified in the US, to fit ports built by Russia, as befits the international nature of the ISS.

For the Amateur Radio Newsline, Roy Neal, K6DUE

--

Installation of the 2.5-meter long flexible tape antenna involved not only the mechanical deployment but routing cables and establishing the R-F connection as well. (ARISS)

**

HAM RADIO IN SPACE: THAT ANNOYING SATELLITE IS OFF 2 METERS

An annoying mystery satellite transmitting AFSK, frequency modulated Morse on 144.100 MHz for several days has been identified. It turned out to be a signal from the MAROC-TUBSAT satellite. This is an Earth-sensing spacecraft owned by a Moroccan government agency called he Royal Center for Remote Sensing. It was placed into a polar orbit by a Russian launcher on December 10, 2001.

As soon as he learned of the interference to amateur operations, Professor Udo Renner of the Center had the 144.100 MHz transmitter turned off. He then notified AMSAT Germany that TUBSAT was no longer on two meters.

But TUBSAT also has a downlink at 436.075 MHz. This system is only busy over North Africa and Europe and only when the control stations in Rabat and Berlin are activated. It has not been heard elsewhere in the world. (AMSAT-NA)

**

Break 1

From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the Pentucket Radio Club repeater serving Groveland Massachusetts

(5 sec pause here)

**

SPECTRUM PRESERVATION: ARRL SAYS IT WILL FIGHT TO KEEP RFID OFF 70 CM

The ARRL says that it will go all the way to protect the 70 centimeter ham band from a threat brought by commercial interests. At issue is a plan from SAVI Technology and already tentatively agreed to by the FCC to deploy unlicensed transient R-F identification tag transmitters operating between 425 and 435 MHz. These tags run at much higher field strengths and duty cycles than Part 15 rules now permit.

According to a League bulletin issued on January 29th, ARRL officials have already met with members of the FCC staff as part of the League's effort to stave off a band threat. The bulletin says that General Counsel Chris Imlay, W3KD, and ARRL Technical Relations Manager Paul Rinaldo, W4RI, delivered an ex parte presentation to FCC Office of Engineering and Technology staffers January

14th outlining the opposition of the ham radio community. (ARRL)

**

FCC: CHAIRMAN POWELL HOME AFTER HOSPITAL TESTS

Federal Communications Commission Chairman Michael Powell was discharged from the hospital on Friday January 25th. This, after a two-night stay in the to undergo tests because of a lingering stomach bug.

Stomach discomfort caused him to cancel appearances at the Consumer Electronics Show in Las Vegas on January 8th and again at the annual conference of the National Association of Television Program Executives on Wednesday January 23rd. Doctors advised precautionary tests that required overnight stays at Walter Reed Army Medical Center in suburban Washington. (Published news reports)

**

ENFORCEMENT: THAT SONG WAS NOT AS BAD AS WE THOUGHT

The Federal Communications Commission has dropped an indecency fine against a Colorado radio station. KKMG FM of Colorado Springs had been fined seven-thousand dollars for airing the edited version of Eminem's "The Real Slim Shady." This, after a listener wrote the regulatory agency to complain.

At the time the fine was issued federal regulators said the edited version still included some expletives and references to violence and graphic sex. But the FCC now says it has reconsidered. It now says that the lyrics in the edited version didn't violate its rules by being "patently offensive." (FCC)

**

RESCUE RADIO: BRAZIL RADIO OPERATORS HELP IN POWER OUTAGE CRISIS

A major electricity blackout hit at least five Brazilian states on January 21st, and it was hobby radio enthusiasts that let people know about it.

The blackout, which began at 1:30 p.m., hit hardest in the industrial southeast and the major cities of Sao Paulo, Belo Horizonte, Rio De Janeiro, Goiania, Vitoria and the capital, Brasilia.

According to news reports, Brazil’s National Energy Agency blamed the outage on transmission line failures. The same news report credited Brazilian hobby radio operators as informing authorities that subways in Rio De Janero and Sao Paulo were halted and that traffic lights were out snarling commuters in several areas.

The outage was caused by a failure at the Itaipu hydroelectric station in southwestern Brazil. A power-line failure caused thirteen of the dam's eighteen turbines to stop, cutting off nearly 20 percent of the country's energy. Power was restored about three hours later. The news story did not identify the radio operators as being hams. (Various shortwave news reports)

**

RESCUE RADIO: NEW INTER-JURISDICTION RADIO SYSTEMS BEING INTRODUCED

Santa Clara County California, police, fire and emergency medical personnel have never been able to communicate with one another at the scene of a major disaster. This is because each agency uses a separate radio system. That is expected to change this year.

Santa Clara County will be leading the nation in using new digital radio technology to solve the inter-agency communications problem. The new system will allow up to eighteen participating jurisdictions in any county to talk to one another instantly.

By way of example, once the system is up and running, officers involved in one of California's famed high-speed car chase will be able to talk directly to police in the neighboring jurisdiction as the suspect approaches that town. They won't have to switch channels or go through dispatch centers. This means less time wasted and the probability that lives will be saved.

While Santa Clara county is at the head of the pack in adopting this new digital communications technology, the same news reports say that and Washington, D-C is not far behind. (Cal-State Info.)

PUBLIC RELATIONS: A CHEAP SATELLITE

A Cheap Satellite is the name of an Associated Press item that highlighted the work of the faculty and students at the United States Naval Academy in the development and launch of the P C Sat ham radio satellite. The story tells how the twenty-five pound bird was built using off the shelf products including a tape measure for its antenna and rechargeable double A cell batteries for power.

The story was written by Tom Stuckey and moved on the wire on Wednesday January 23rd. It noted that PCSat, was the 44th amateur satellite put in orbit. It is one of more than a dozen built by university students around the world. (VHF Reflector)

**

CONVENTIONS & HAMFESTS: ORLANDO HAMCATION WEAK SIGNAL FORUM

The Orlando HamCation will host its first ever Weak Signal VHF and UHF forum. Beginning at 2 p.m. on Saturday Ferbruary 9th, the one hour session will be moderated by N2CEI, of Down East Microwave. Also, Tom Haddon, K5VH, will be on hand to motivate more Florida hams to become active on the Microwave bands.

If you are in the Orlando Florida area on February 8th to the 10th drop in on the Orlando Hamcation. For more details and or advance reservations, go to oarc.org/hamcat.html on the World Wide Web (W2BZY)

**

CONVENTIONS & HAMFESTS: DATE CHANGE FOR RADIOFEST 2002

Brian Broggie, W6FVI, asks that we pass along a date change for RadioFest 2002 sponsored by the Naval Post Graduate School Amateur Radio Club in Monterey California. The new date is February 23rd. More information is in cyberspace at k6ly.org/radiofest. (W6FVI)

HAM RADIO SCHOLARSHIPS: THE DARA SCHOLARSHIPS

The Dayton Amateur Radio Association is one of three ham radio organizations seeking nominations for its scholarship program for the 2002-2003 academic year. According to DARA, applicants must be graduating high school seniors in 2002 and hold any class of an FCC issued mateur Radio license. The scholarship awards run up to $2000, as determined by the scholarship committee. Money must be used toward tuition at an institution of higher education.

To obtain an application, send a self-addressed, stamped envelope to the Dayton Amateur Radio Association Scholarship Program, 9873 Lower Valley Pike, Medway, Ohio 45341. You can also obtain an application by e-mail to n8emo1@msn.com. Completed applications must be postmarked no latter than June 1st to be eligible for this years scholarship program. (DARA)

**

HAM RADIO SCHOLARSHIPS: THE FOUNDATION FOR AMATEUR RADIO

Another organization offering scholarships to hams id the Foundation For Amateur Radio. The Washington, D.C. area group will administer sixty-two scholarships for the academic year running from 2002 through 2003. Licensed Radio Amateurs may compete for these awards if they plan to pursue a full-time course of studies beyond high school and are enrolled in or have been accepted for enrollment at an accredited university, college or technical school. The awards range from $500 to $2500 with preference given in some cases to residents of specified geographical areas or the pursuit of certain study programs. Additional information and an application form may be requested by letter or QSL card to the FAR Scholarships, Post Office Box 831, Riverdale, Maryland, 20738. (Foundation For Amateur Radio)

INTERNATIONAL - SOUTH AFRICA: SA RADIO AMATEURS OF THE YEAR NAMED

Turning to international news, South Africa is honoring two of its own as that nations Radio Amateurs of the Year. Q-News Graham Kemp, VK4BB, brings us the details:

--
The South African Amateur Radio Development Trust have announced the winners of the 2001 Siemens Radio Amateur of the Year Award. This award is made annually to a Radio Amateur who has made a major contribution to the Amateur Service either on a technical or development basis in ZS land.

The award has been bestowed jointly on Bradley Phillips, ZS5BP, and Garth Wilson, ZR6CY. ZS5BP for his work on the introduction of Iphone and the development of the Internet Radio Linked project. ZR6CY for his continuous efforts to develop communication skills amongst the youth. He has to date presented no less than 80 camps for Voortrekkers to learn the Morse code and basic communication skills.

For Q-News Australia, I'm Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

This award is considered as South Africa's equivalent to the Dayton awards presented here in the United States. (SARL News, Q-News)

**
INTERNATIONAL - UK: KENWOOD TROPHY AWARDED TO G3XWH

Meantime, over in the U-K, Richard Horton, G3XWH, who chaired the RSGB's Future Licensing and Examination Forum has been awarded the Kenwood Trophy. This, for his significant contribution to training and development in amateur radio.

Horton recently retired from the Radio Society of Great Britain's Board where he was responsible for amateur radio development. His committee was responsible for much of the work that went into the creation of the new U-K Foundation Class license. (GB2RS)

**
DX

In DX, DJ4KW and DK9GG are currently active from Belize as V31YN and V31GW, respectively, through early February. Activity is on CW, RTTY and PSK 31. (RSGB)

And IN3QBR will be active from Vientiane as XW3QBR until the 31st of July. He will be joined, from the 20th of April until the 10th of May by IN3ZNR operating as XW3ZNR. (OPDX)

And R1ANF began operations as CE9 slash R1ANF on the 29th of December from a Chilean base in the South Shetland Islands. He is active on 10 to 28MHz with 100 watts to an R6000 vertical. For all three QSL as directed on the air. (RSGB)

**
THAT FINAL ITEM: CELEBRATING THE LIFE OF ED CLEGG W2LOY

And finally this week, if you were on the VHF bands in the 50's, 60's and 70's then the name Clegg Labs touched your ham radio operations. And as we hear in

this report, the family of the man behind the gear is inviting you to help celebrate his life.

--

Even if you did not own any Clegg gear, the chances are that you talked to someone on the air who did. Whether it was the top of the line Interceptor receiver and Zeus transmitter or the entry level 99'er transceiver, it was easy to spot a Clegg signal by its almost overpowering modulation that seemed just right for the R-F carrier it was on.

Almost every product that carried the Clegg label was designed by the company's founder Edward T. Clegg, W2LOY. When he moved the company to Pennsylvania in the 1970's, Ed took the call W3LOY. Likewise, after retiring to Ohio he traded the 3 for an 8, but kept the famed L-O-Y suffix.

And regardless of the call area, Ed Clegg was first and foremost a communications designer well ahead of his time. Even more important, he was a positive influence on just about everyone with whom he came in contact.

Ed Clegg left us last September at age 80. Now, his wife Martie will be hosting a gathering in March near the Clegg home in Lancaster Ohio. The purpose is to celebrate the life of Edward T. Clegg. And they are asking you to help.

Martie, her daughter Linda and Linda's husband Rob MacGuffie, K2HZN, are asking anyone who knew Ed to share in the celebration. They know that most of you won't be able to be in Lancaster Ohio on March 30th. But some of you do have memories, stories, photos and other Ed Clegg memorabilia that would help to make this day even more unforgettable.

If you have something to share, please contact Linda and Rob before the end of February. Their address is 70 Province Road, Gilmanton New Hampshire with a zipcode of 03237. Rob's cyperspace address is K2HZN@yahooo.com.

For the Amateur Radio Newsline, I’m Cathy Anno, KB0FDU.

--

By the way, a number of us here at the Amateur Radio Newsline began our ham radio careers using gear designed by Ed Clegg. In fact, our producer Bill Pasternak, WA6ITF, got to know Ed while Bill was still a teenager operating A-M on the 6 meter band. (Clegg family)

1817. FS: W4UVV Virginia Frequency Directory 2002 Edition

Newsgroup: rec.radio.scanner
Date: 2002-02-02 18:49:08 UTC
From: John Wilson <jwilson@erols.com>
Message-ID: <3C5C34A4.344D1540@erols.com>
Source record: 52986
Cross-posted to: alt.radio.scanner,rec.radio.scanner

The W4UVV Virginia Frequency Directory 2002 edition is in its' 16th year of publication and now is available on CD ROM. The master file currently contains approximately, 101,000 listings for both private sector and government users. The directory does not exclude any "sensitive" frequencies such as surveillance, etc. Major services include but are not limited to: Public Service(Police, Fire, Rescue), Aviation, Business, Federal, Marine, Military, Press and Utilities. Among many past users have been three TV station news departments that use it as a "Bible" frequency/user reference some commercial two way radio businesses. The directory covers the frequency range 25-2,500 mhz. with some additional frequencies of interest below and above that frequency range. Some additional adjacent state frequency information such as federal and military and Press users in the DC/Maryland area are included. The directory, where known, also provides information as to the location of the control station for a remote site transmitter.

The W4UVV Virginia Frequency Directory was reviewed in the October, 2001 issue of Monitoring Times magazine under "Product Review".

File data record fields and information contained where known are: FREQ1(T or R or S or X(trunked output)), FREQ2(T or R or S or Y(trunked input)), SV(Service), CALL(Callsign), USER, CITY, COUNTY (or Independent City), LAT(Latitude), LON(Longitude), TAH(Total Antenna Height), R(Repeater),B(Base), M(Mobile), P(Portable), PL(CTSSC analog or digital) and CH(Channel). Master file sort sequence ascending: FREQ1(Major), FREQ2,(Intermediate 1), SV,(Intermediate 2), USER (Intermediate 3), CITY (Intermediate 4), COUNTY (Intermediate 4), LAT, (Intermediate 5), LON (Intermediate 5) and CH (Minor).

For MS DOS users, the Master File and file extract files Aviation, Business, Federal, Marine, Military, Press and Utilities are in DBASE3/DBASE4 format. Also in "dbf" format are file extracts for every county and independent city in Virginia. This new feature allows the user to customize a "local" frequency file for monitoring selected counties or cities. The "local" file can further be customized, for example, to delete paging or broadcast or other services or frequencies of non-interest.

For Win 95/98 and ME users, the aforementioned files, excluding the county/independent city extract files, are available in MS EXCEL and text
formats. MS EXCEL can import DBASE3/DBASE4 format files for record data processing, editing and printing. Because MS EXCEL does not support front/back page printing but only one side printing, the use of

a separate software file print program called CLICKBOOK2000 is highly recommended. Files are also provided in CLICKBOOK2000 format. CLICKBOOK2000 is reasonably priced and available at <www.bluesquirrel.com>. Printed at 4 font, 160 records per page, the master file is approximately 1,120 pages. It is huge!

Now a few comments about the FCC database. News flash! It is not 100% accurate. Where errors are obvious, entries on the W4UVV VFD have been corrected. Additionaly, it does NOT allow the user to search by the name of an independent city except by a radius of entered latitude and longitude option. I have discussed this problem on more than one occasion with the FCC reps. Their response were arguments as to why they couldn't (read wouldn't} change the database query programs. The FCC ASSUMES that every city in the county is located within a county. This is not the situation in Virginia. This independent city status causes problems for license application filing. Often an independent city is listed in an adjoining county and this is not correct. To further muddy up things, actual off air monitoring of a number of licensees has disclosed that some are not using the frequency assigned for output, but as input. Some are licensed for repeater operation, but operate simplex. Others are operating on frequencies for which they were never licensed and some still operating without renewing their license.

In our opinion, the W4UVV VFD has no significant competition because no publication or frequency source comes close in providing the scope and detail of information provided in the W4UVV VFD. Did you say Police Call? Please! Police Call basically extracts FCC database information and depends upon individuals to submit corrections. Except rarely, does it tell you who the user is of a specific frequency? Does it tell you the analog or digital CTCSS tone? Does it tell you the Fire/Rescue station ids? Does it give you the latitude, longitude and total antenna height of the structure? Does it tell you where the remote transmitter and/or control site is located for an licensee? Can you tell who the users are of the "PW" bundled frequency assignments? Is it Fire? Rescue? Police? Utilities? Animal Control? Where known, the W4UVV VFD identifies them. You know the answers to those questions and it is "NO".

Within the past 3 months, off air monitoring has discovered two new analog in the clear federal users 24/7 on high VHF in state. Recently a surveillance body mike has been monitored on high VHF.

The W4UVV VFD is a dynamic document. Literally hundreds of hours have been spent updating this latest edition. The CD ROM files size is approximately 640 mbs! That is almost a FULL CD ROM of information! If you spent 10 seconds sight checking each record on the database currently at approximately 101,000 records, it would take you approximately 280 hours or 35 eight hour days or approximately one month and one week or approximately five weeks to view the entire file.

The W4UVV Virginia Frequency Directory is available for $75.00 which includes shipping via USPS. The CD ROM is shipped within 24 hours of order receipt of a cashier's check or USPS money order. Sorry no CODs or credit card purchases or refunds. Allow 5 work days for personal checks to clear. Include legibly the name and mailing address and telephone an/or or email address in your order in case we need to contact you.

If you wish to purchase a copy of the W4UVV Virginia Frequency Directory, send an email to: <jwilson9@erols.com> for specific mail ordering information. Upon request, a copy of the "Readme1st.doc", "User's.doc" and "DBASE3instructions.doc" files will be emailed for your review prior to purchase.

I have been researching the various aspects 2.4 ghz. reception. In doing so, I search various websites. According to one website that did "hands on" testing the R-3's performance on 2.4 ghz. is AWFUL! It is "deaf", i.e. poor sensitivity and the tuning range is not high enough. Some interesting monitoring occurs ABOVE 2450 mhz. In one test the R-3 had to be within 3 ft. of the test transmission on 2400 mhz. Contrary to the ads showing reception of "red neck" in car video transmissions, it is a TERRIBLE performer on 2400 mhz. according to the webpage posting.

There are better choices but they are not bundled into a handheld receiver and are only for the serious monitors willing to configure a S band monitoring system. I am in contact with a manufacturer of a really neat unit for the 2 ghz. range. If ordering details can be worked out, I may write an article on S band monitoring and submit it for publication.

I just bought the R2 the other day from AES on DEMO. Spent $130 and let me say its an awesome sounding scanner!

CHEAP and for all the features that its has.. its worth every dime. I have spent 100's more on scanners, that don't even have the features this one has.

1823. NEED ELECTRONIC COUNTER MOD 4 PRO-2006

Newsgroup: rec.radio.scanner
Date: 2002-02-02 19:13:48 UTC
From: n9mxt1@aol.com
Message-ID: <20020202141348.21672.00000916@mb-fd.aol.com>
Source record: 52992

Hello,
I used to own a modification handbook that showed a modification for the PRO-2004,5,6 I forgot which. It was a mod that you wired in a electronic counting module to your scanner and it would count the number of hits on a specific frequency you were monitoring. Basically, you leave your scanner on a channel in the beginning of the day and come back after work and see how busy that channel was. Its nice for finding out if a frequency/repeater is active or not.

Has anyone else heard of this modification before? If so... what is the mod? How do I wire it into the scanner?

Please email me details on wiring it up.

Thanks so much for your time and sure hope someone can help!

This may be a really dumb question, but what exactly is an unlicensed TV? The whole idea behind it makes little to no sense to me... From what I gather, you had to have a license to own a TV in the UK? Pretty ridiculous if you ask me... Were they afraid you were going to watch too many soap operas or something and corrupt your brain?? Some shed some light on this half-assed idea here for me would ya...

Ok, Dev goes to radio shack to buy his writable CD's that he makes the
kiddie porn on.

Take a look at some of the postings about
ExportRadios.com in rec.radio.cb. Seems you're not the only person who's had a
bad experience with this business.

Outrageous prices for scanners on ePay is nothing new. A year or two ago when Sony discontinued their Wavehawk scanners, people were paying $50-$100 more for Wavehawks on eBay than the scanners were selling for at various online retailers. Apparently some people just don't want to spend a little time looking around the net to see where the real bargains can be had.

Great! I have the cheaper (not VHF Lo version) of AntennaWarehouse
Discone. I like it as well for an omni. If you find something better
than a Discone for omni-directional let us know I'd be interested in
hearing about it.

About 10 years ago I had a Radio Shack vertical. Can't remember the
model and don't know if its made anymore. It had three vertical
elements, one for VHF-Lo, VHF-Hi, and UHF. It also had 3 (maybe 4)
radials which were 90 degrees to the vertical element. That was a super
great antenna. I wish I didn't leave it at a house I moved out of 10
years ago!

Actually it was a mutual friend (you know who)
that indicated the next ScanFan would be out sometime between thanksgiving and
xmas.
That was back last fall, so certainly doesn't qualify as recently.

While I'm taking this moment of respite from Fredricks, ;-)
maybe you can offer up an ETA, or are we both awaiting Fred's recovery?
For the time being, I've been using this:

Or better yet,
if you don't want to get caught sending it out of the country to one of those
sneaky canuck terrorists,
you can send it to me in here San Diego.
There's lots of military around here, so it should be safe.
Just be sure to wrap it in tin foil first ;-)

Before I spend the money on an Optoelectronics OS-456 Lite, does anyone know of an OS-456 for sale (or one they have that they'd be willing to part with) for a reasonable price?

I've been looking on eBay and hamfests for over a year, and you can find plenty with the scanner already attached. I have the scanner, and don't really want another.

Thanks.

I had the Alinco DJX-10E for 2 years, I found this unit to be slow and deaf on some bands. I have since sold it and bought the Alinco DJX-2000E and I am glad I did.
The speed has improved, stations that I could not pick up before now can be heard. It does not suck the batteries dry in a few hours.
Heaps more features which you are obviously aware of, I would not even compare this to any Icom or AOR gear.
The HF side is as good as my desktop HF Reviver if not better. Although there is not a lot that is worth listing to above 1200 Mhz it still pulls in the signals, great.
This scanner can decode CCST, de-scrambling and flash tune is great.
Yes it does not come with a program cable but here in Australia they are only A$50.00
Unless Alinco have produced Amateur radio gear for years and are great.

So yes go and but the DJX-2000, you wont be disappointed.

Hi all,

can anyone give some suggestions on building a good low vhf antenna?.

Also incredible scanner skip this week here in Ireland, California CHP in on
a couple of days at 42 mhz!.

I wonder if the current DJ-X10 is still deaf? I know it's still slow, but that just means I won't be finding any "new" frequencies with it. I'll also be a bit behind when I need to search several banks for activity during a quit time...I guess that's why they didn't care to have convenient bank linking, because why would you really want to link banks on a scanner that is so slow? I would expect to be scanning only a few frequencies in one bank at a time with 5 channels/sec!

What do you think? Is it the same DJ-X10 from 2 years ago today??

Sorry to be late to this discussion but I just realized what the thread was about. Cool stuff but...

Why is it that everything innovative must be contested & squashed by some idiot ham with his rulebook surgically attached? The fact is 2.4 GHz is a ham band that is shared with Part 15 devices such as the IBM-3330. SO what is the problem? There is none for those who can read & understand, without paranoia setting in. Wanna-be radio police need to get a real life, a job or take a bath!

Reading into things that aren't there. Good God, no wonder we can't bring younger folks into the service! I don't blame them for sticking to computers because old, anal retentive ham own ham radio!

1858. Trunking freqs for NJSP?

Newsgroup: rec.radio.scanner

Can anyone give me an accurate listing of New Jersey State Police trunked frequencies in the Ocean County area? I have lots of freqs, entered them in and went to trunk tracking mode, but I only pick up occasional weak signals apparently from barracks far away. I am particularly interested in the freqs used by the barracks on the GSP, just south of the Toms River toll booth, not sure of the troop letter.

Also, any non-trunked frequencies (besides SPEN) that they use would be nice.

Uh, Rafman,
From the posts you are quoting I don't see the gripe. Not that your
gripe is without merit but you'll have to work harder to make a case
about being repressed by 'anal-retentive radio police' that are in
agreement with your point of view.

Really quite simple. In England, each television (and possibly each radio broadcast receiver, the AM/FM/SW type - not sure) had to be licensed by the British government, just like you have to license a car or motorcycle. It is a yearly license, I believe. A registry of all permits is maintained, and the British version of the FCC uses a fleet of vans to drive around and detect the oscillators of TV sets. If a set was detected in a residence that didn't possess a permit, WHAM!, they got a fine. Just another way for the government to tax the people.

Various cable companies in the U.S. use the same technique to determine if somebody has bootleg cable.
In my area the old cable provider, Multimedia Cablevision, had a Ford Taurus stationwagon with a PVC tube-encased antenna on the roof. They would drive it around during Pay-For-View events and document bootleggers, then file complaints with the District Attorney's Office for Theft Of Utility Service, which had been made a violation of city ordinances.

They were on clearance about three years ago for about $6.00 at Rat Shack...I think I have some left in the boxes, new, I bought all I could get because my cousin was a district manager. I know I have one brand new, unused, assembled in my attic if you are interested. Could probably be mailed for $5.00 or so, it weighs almost nothing.

I wonder if the current DJ-X10 is still deaf? I know it's still slow, but that just means I won't be finding any "new" frequencies with it. I'll also be a bit behind when I need to search several banks for activity during a quit time...I guess that's why they didn't care to have convenient bank linking, because why would you really want to link banks on a scanner that is so slow? I would expect to be scanning only a few frequencies in one bank at a time with 5 channels/sec!
What do you think? Is it the same DJ-X10 from 2 years ago today??

Hello. I had an Alinco DJX-10E several years ago together with an Icom R-10, and eventually sold both due to (a) their slow scanning rates, and, in the case of the Alinco, the 'selective deafness' the receiver exhibited on several bands. I recently bought an Alinco DJX-2000E, and frankly, whilst it is faster than the DJX-10E, it's not by a factor of 2 or anything like it. Also, the further up the band you go, the poorer the sensitivity becomes. At anything over 900 MHz it's 2 V @12 dB SINAD (NFM) and 4 V @ 12 dB SINAD (WFM) which are nothing to boast about. Mine's for sale if anyone's silly enough to part with AUS$1100. It comes with three (yes three) Alinco EBP-37N 700 mAH batteries ($95 each), the computer cable & software for Cloning or Computer Control, ($79) EDC-88 Fast Charger, (included) ESC-29 case ($30) and is boxed with manual & in as-new condition. The Bug Detector is a farce; whoever heard of a bug detector in which you had to know the frequency of the bug first! Hah! And likewise, the Frequency Counter only works with signals over 100 dB and even then, the menu settings you need to go through to get it to work are so onerous no-one could be bothered. This is a yuppie scanner & I'm sorry I wasted over $1400 for the thing. Because I'm honest I'll probably die with it. Anyone contemplating buying this unit, save your money & get an Icom R-10 if you don't want trunk tracking & don't care too much about the scanning rates, pay a bit more & get an AR-8200 MK II, or a lot less & get a Uniden BC245XLT. Any of them would be a better buy than the Alinco.

What about if it's replacing a RADIO SHACK Pro-62 from 7 years ago?? Is either the DJ-X10 or the DJ-X2000 at LEAST a good replacement for my old scanner? I realize that there may be other better scanners, but they also cost more money. What I REALLY want is a AOR 8200 MKII or the new Yupiteru, but they cost too much!. So is the DJ-X10 simply "worth" the money for what you get and definitely considered a significant upgrade from probably any scanner from 7 years ago ESPECIALLY a RS scanner minus the fact that scanners got MUCH SLOWER in 7 years, and I'm listening to mainly "Lo UHF", MilAir and HF??

"Are we saying that a 2002 Toyota Camry sucks and is slow, because we have brand new Jaguar? If we are, then we must realize that a Camry which sucks in comparison to a new Jaguar actually rocks if you are replacing a 1993 Corolla AND if you can't yet afford a Jag. "

The problem with the FCC database site is two fold. First, in
order to use it, you need to have Netscape 4.7. It will not work
with anything else, or a newer version. It will not work with
Internet Explorer.
Next, the first time you use it, you need to shut off all your
virus protection. The site will download several files that the
virus programs stop. After the first time you use the site, you
can turn the virus protection back on.

Hope this helps. I had to call the commission the first time I
tried to use it.

People are stupid in what they think they are getting for the price they pay on Ebay. Its just plain dumb. The best part for the seller is they do it all the time. The sellers are laughing all the way to the bank.

One would be much better off in checking on what value an item has before bidding on it on the Ebay. That way you have an idea how much to pay for what you think your getting.

Also pay close attention to the words in the add. Like sold "AS IS", or "unable to check out", or "no way of testing". These are all key words to think long and hard on what your willing to pay.

I have bid and got radios that had the programming EEPROM removed. This effectively makes the radio non operable. There was no mention that the part was removed in the add. When contacting the seller, ask if all parts are there.

You might want to check out the "VhfSkip" email group. People post their loggings each day, and there are many who are also monitoring the band from Europe.
http://groups.yahoo.com/group/vhfskip/

StrongSignals has a discussion board you might be able to find some good information on as well:
http://www.strongsignals.net/access/boards/skip/board.cgi . Paul Logan has also put up a really good website with logs and utilities to help you identify signals. His website is: http://www.geocities.com/yogi540/

I am hearing Indiana State Police on 42.420 at the moment with references to Indianapolis and Goshen. North Carolina Highway Patrol is also coming in pretty good. They use a PL of 173.8. For some quick CHP's plug in 39.400, 39.600, and 39.800 see if you hear references to San Diego then you know it's the California Highway Patrol. Those frequencies will have a PL of 162.2

Bullshit. You are a known thief that has many people now passwording their Mil freq websites. People like Grove and I who have spent years constructing lists of freqs should be safe from you who copy them in toto to your site, add a copyright notice and then challenge the people you stole from, just to smokescreen your theft.

Also, you ought to spend more time learning about FAA ATCs prerogatives for having unpublished freqs before you title your site "All Air Traffic Control Freqs, fool."

Go to the FCC website <www.fcc.gov> and do a search on a particular frequency for all of the US for "PP" service code and then listen to comms on that frequency. Often geographical info is included in a transmission. Sporatic E propagation typically is 1,000-1,500 miles for single hop. You are receiving multi-hop with a high MUF and a geographically wide condition. For you to hear the California Highway Patrol in Denmark on 42 mhz. would be extremely unusual. California and Missouri and North Carolina State Police an other states are quite active on 42 mhz. Virginia still keeps its' 42.86 and 42.88 mhz. frequencies, but does not use them. I suspect you are hearing one or more US east coast state police. I would concentrate on those states east of the Mississippi River that use 42 mhz. I believe that one or more New England also uses 42 mhz. and possibly Florida. I know the Florida Highway Patrol Marine operation uses 42.92 mhz. as it on occasion in the past has been used by the Va. State Police as a surveillance frequency. When the skip is in from Florida, I hear them quite well hear.

Additionally, the Code of Federal Regulations part 47 that apply to law enforcement operations, primarily public service assignments do assign specific 40 mhz. frequencies for base/mobile operations to certain states. Do a internet search. The CFR can be downloaded in PDF format. I have them documented in my database but there are too many to post. If you email me at <jwilson9@erols.com>, I can extract them and email them to you.

I have a relative who works for Motorola and he's telling me that threre are 3 states, 5 cities, and 7 counties already that will be switching to encyption around the time Uniden releases their digital radio. One agency (HP) are going to wait a month or two before they encrypt to piss people off. What pricks!!!!!!

Lets see, there is only one page with mil freqs that I know of that is password protected. And according to that webmaster it is password protected for reasons other than you suggest.

Next, please tone down your language a bit, this is a family accessable newsgroup.

The list that Mr. Stern is refering to by his comment is my ARTCC list. Mr. Stern nor Mr. Grove spent zero time and effort compiling the list that I used to put together my ARTCC list of frequencies. The data for this list came directly from the FAA's FTP site. I'm sure Mr Grove has already inspected my ARTCC freqs insearch of the "Bogus" data he puts in his lists to intrap people using his list.

Mr. Grove and Mr. Stern seem to think they own every list if of frequencies which has ever been published. Heck next they'll start trying to lay claim to my Shuttle, Airforce One, and Presidential Motorcade photos.....

George
http://www.MilAirComms.com <-- HF, VHF, UHF Military Freqs and MORE! It must be a great website as the "MilAir Exports are getting UpSet"

The Grove Scanner Beam mentioned above is $74.95 plus shipping not $45.00. At least that is what his website says, is there a sale?

I recently purchased the AntennaWarehouse Scanner Beam (exact same antenna). Same antenna but price at only $54.00, almost a $21.00 saving! It is one excellent antenna, you can read my review at:

http://www.milaircomms.com/review_scanner_beam.html

God man get a grip on yourself. I know I have been searching and searching and asking questions about the milair bands and it seems like no one wanted to give me the time of day. I started to think that most of the people who listed to milair bands thought they were gods and too good to answer the questions of beginners. I have seen your posts allan and you like to brag about what you hear but you never want to give us frequencies or information that is of help. Then George's page came along it was like all my questions answered. George will even respond to questions and email unlike other so called milair experts in this hobby. Granted not all are bad but it seems like all that you want to do allan is keep all your frequencies a big secret.

Allan, heres a suggestion for you. Be a man and don't rag on georges website and build a better one. It would be of more help to the hobby they the last few posts you have made on here.

Roger

1891. Re: Texas: State troopers now have Radar detector detectors

Newsgroup: rec.radio.scanner
Date: 2002-02-03 20:38:09 UTC
From: John Wilson <jwilson@erols.com>
Message-ID: <3C5D9FB1.AF6DA828@erols.com>
Source record: 52859
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Radar detectors have been illegal in Virginia since Marconi made his first transatlantic contact. Using a radar detector in Virginia in severity of offense ranks slightly below murder and rape. Previous legislative attempts to repeal this ridiculous law have failed. Why? Because it is a hugh moneymaker for the state and local governments. Some localities budget for anticipated radar detector/speeding revenue. As you might expect, there also is an unofficial monthly quota which is denied. I have been told this by ex-cops and heard radio comms alluding to same. Depending upon where the "radar detector criminal" is caught, certain nearby local governments may get part of the fine. The only progress made in this area legislatively is that now if you are caught with a radar detector the VSP or local cop types cannot keep your detector and later destroy it. They really miss that power. They write down the serial number and return to you, but you must physically place it in the vehicle where you cannot access it, at least until the cop leaves. The fine including court costs is about $75. You can contest it in court but it is your word against the troopers' and guess who will be believed? Hint, it won't be you. The VSP has radar detector detectors. I cannot speak for other manufacturers, but so far they cannot detect the Solo model radar detector. When riding with a "criminal" friend recently on I95 who had a Solo, I noticed occasionally the detector would alert and detect briefly but there were no police around. We also monitored CB ch. 19 and the scanner for all appropriate police comms. I finally realized that the Solo was detecting and processing LO radiation from vehicles having radar detectors going in the opposite direction on I95!

The roadside signs you see in the People's Republic of Virginia that say "Keep Virginia Green" are not referring to forestry conservation. The only hope in the future for repealing this legislative abomination is for federal highway funds being withheld to the state. Other applications such as railroad crossing warnings, ambulance/fire trucks in the area, road conditions and other related audio or text applications already exist in some parts of the country. I think it is a federal mandate that there be no preclusions to reception of these signals. Often this capability is bundled as part of a radar detector.

So all of you radar detector using criminals had better remove them from your vehicle if you wish to travel with a reasonable peace of mind in the commonwealth of Virginia. Yes, it is not the state of Virginia but a commonwealth. Much of the commonwealth's laws are based upon old English common law. You can use a scanner. That is allowed. If you hear the VSP troopers talking to another about a "Signal 16", it might you, you because you obviously are a potential speeder because you have a radar detector. How many major Supreme Court cases originated in

Virginia? Let me count..school busing...interracial marriage...real estate agents fees..poll tax Darn that Supreme Court! Voting is privilege and why shouldn't people pay to vote? Well, we will just have to make up for it in other forms of taxation and fines and whatever else that works.

PS: If you are stopped for speeding...I forgot VSP now uses VASCAR. An observation in a fixed wing aircraft circles a particular part of the interstate or other road. White stripes are painted on the road. The observer using a stopwatch marks the time it takes a vehicle to go between two stripes. It is sort of accurate, but heck, close counts. The vehicle description is relayed to ground units...this usually ties up 2-4 patrol cars and you are caught. I digress...if caught keep your mouth shut. Do not tell the trooper you have to be in DC a certain time or you have to meet someone somewhere within an hour, etc. The VSP loves that. When you leave, the trooper radios ahead to another unit to look out for you and capture you again. It also is a very bad idea to stay in the passing lane of the interstate. That also puts you at higher risk for a possible stop for speeding. One more thing. If you ride a motorcycle it would be a good idea to wear a business suit. Two or more motorcylists wearing leather jackets and boots riding together constitute a motorcycle gang and their presence and location often is relayed from trooper to trooper. The inferernce is that they are looking for any probable cause to stop them.

Wrong on both accounts. Not to look up frequencies! They have also fixed the compatibility problems with IE. I use it all the time to look up frequencies & have used it to file ULS updates. I reluctantly use IE since it was bundled in this machine & I don't want to separate the Siamese twins of IE & MicroShaft WinDoze!

Well, My Friend Bill,

It never ceases to amaze even me that whenever something is obvious, the radio police seem to make an argument nonetheless. This case is obvious, using a Part 15 device to connect to your radio is legal as type acceptance is not reuired for amateur operations in band. It is both sad & amazing that the argument is even raised by those who are a little "tight in the caboose". Fact is 2.4 GHz is a shared ham band anyway, like 900 MHz. In fact, these bands are becoming quite useless because of the proliferation of such pipsqueak devices. So even if it was of legal question, it is in a hamband. Some people just try to be smart when it is obvious they have nary a clue about what they are talking about! All legal arguments, no experiments... Besides it is easier to beg forgiveness than ask for permission... Than somebody else piles on with the "broadcasting" stuff... Good Lord, get a clue... Rules, rules, rules...

Legalities, smegalities, let's get on with the fun before it is too late! And that time is coming soon...

Your friend Rafman, in the sticks of the Commonwealth...

'lo Russ.

The difference between the A and B models are....
1... The A model has the name of "Radio Shack" on the front,
2... It seems that the B model has a narrower ssb filter than the A model.

To be honest, I find the A model better as the ssb signals are easier to
hear! I don't know of other differences. If you find out the others I
would like to know also.

cheers.... Geoff Boyce. (M1AHN, RadSat).

Check the step size that the scanner uses for that frequency range. To program XXX.4125 you'll need a 12.5 kHz step size. It's likely that your scanner's step size for the VHF high band is 5 kHz, so you can get close but not right on.

Can you hear anything if you're not directly on the frequency? Probably depends on how close and strong the signal.

Receivers like those from AOR, Icom and others have selectable step sizes so as to avoid this problem. I'm not sure the step sizes offered by the Yaesu VR120 and Icom R2, but these would be two of the more affordable choices that are likely to do the job (~$150). When checking the specs before you buy, make sure that the radio allows any step size for ANY frequency range. I learned this the hard way.

You'll also sacrifice some scanning speed and other conveniences with radios of this type, e.g., no keyboard for frequency/channel entry on the two I've mentioned. Good luck, and careful shopping, but that's the fun, isn't it?!

What?? 900 mhz. signals are no more difficult to receive than 44/46 mhz. signals IF you have the appropriate antenna, preferably pre-amped mounted as high as possible, appropriate receiver/scanner, and are within the ground wave coverage pattern of the telephone user and know what you are doing. I have no problem receiving either frequency range. Most of the 900 mhz. duplex analog calls I hear are between 902-904 mhz. Most of the time I also can hear the 926/927 mhz. half duplex side. I monitored one conversation in which the 926/927 mhz. side was full duplex and the 902-904 mhz. side half duplex. Unfortunately the PRO-2006 is not as sensitive as ICOM 7000s, 7100s and other scanner models. That insensitivity was a basic design feature in the 2006 by Tandy because they assumed that the 2006 for the most part was going to be used in an urban environment with lots of intermod and it is a tradeoff in performance. It is somewhat more sensitive than the 2004, but not much.

>The list that Mr. Stern is refering to by his comment is my ARTCC list.

It is my complete Shuttle Monitoring Freq List that you lifted from my site at http://hometown.aol.com/allanstern/myhomepage/index.html

You will claim that you did not, but many folks on Milcom@qth.net and other places are familiar with my Shuttle Freqs list and know that you are a liar, thief.

It is the same list that you posted about when you attended your first KSC/CCAFS launch (according to your post). You said it was a useless list because you didn't get a hit on any of the freqs. Next thing we know, you post it on your Website and add a copyright claim to it.

I have a right to be indignant about you, who masquerades as having acquired all your freqs from Government sources.

Thieves like you are easily detected and their thievery easily documented, thanks to archives. Heh heh.

Certain frequencies(channels) in this range are specified by the regulation for law enforcement tracking.....i.e.,
bumper beepers and other surveillance options. Read the entire regulation.

To clafiy, I am NOT referring to your ARTCC list. I am referring to your Space Shuttle Monitoring List, and you know it.
It is THAT list that you stole from my site at http://hometown.aol.com/allanstern/myhomepage/index.html.

1903. Re: AFRTS TV channel 2 is where?

Newsgroup: rec.radio.scanner
Date: 2002-02-03 22:00:15 UTC
From: John Wilson <jwilson@erols.com>
Message-ID: <3C5DB2EF.EBFEBD5A@erols.com>
Source record: 52871
Cross-posted to: alt.radio.scanner,rec.radio.shortwave,rec.radio.scanner

AFRTS TV is low power by design. I was in Germany in 1969-1972 in federal civl service for the Army. I lived/worked in Worms 30 miles south of Wiesbaden, one AFRTS TV non-color transmitter site operating on US TV channel 16. The other AFRTS TV station was at Kaiserslautern about 30 miles west of me. No one in Worms could receive the AFRTS tv signal...that is except me. I couldn't understand why.
I called the AFRTS officer in charge in Frankfort and he told me that the status of forces agreement with Germany prohibited the US from having more than 100 watts for a tv station operation. That explained why noone in Worms could receive it. Knowing these I knew I could receive it if I could obtain certain components. Being a ham radio operator after receiving my German callsign I attended a German ham club meeting an met a fellow ham who spoke English. After explaining the requirement he recommended I buy a 30 element UHF Wise antenna which I did. It was excellent construction and I ordered a Blonder Tongue UHF preamp from the states. I mounted the antenna on the roof of my apartment building and AFRTS TV was noise free from Wiesbaden. I also could receive the Ktown transmission but it was a little noisy. I subsequently installed several antenna installations in the Worms area.

The reason AFRTS TV terrestrial tv transmissions in country are low power is that the host country does not want its' citizens to view lifestyles and material goods many will never have is politically based. As for current AFRTS TV transmissions to wherever via satellite,
they are MPEG2 PowerVu encrypted and are broadcast on US domestic satellite GE-1 and AOR, IOR, and POR satellites.

Get them archives out. I don't think I said it was a useless list you
posted. Below you will find the EXACT message posted. No where did it
say nor imply your liste was useless. It simply asked the question
about a few freqs still being active. Allan, here is that famous post
that you claimed was a "slam" at you:
_____ Below is the post _____
Hi All;
Today I made the trip to Titusville to view my first night launch of the
Shuttle. I've seen day launches, but this is my first night launch.

On 6/29 Allan Stern posted a list of "Basic Shuttle Freqs" which
included 3 2 meter repeater which would rebroadcast the Shuttle launch.
This morning NONE of theses were active (145.13, 146.94, and 147.15).
Now at 10:30 EDT Shuttle comms are being rebroadcast on 147.27 (I don't
know which repeater this is) but the three previously frequencies are
still dead. You might want to update your lists.

Are Shuttle comms rebroadcast during early morning launchs such as today?

Also, I thought 148.485 would have the countdown status, I heard very
few comms on this freq. I wouldn't have know where the countdown was at
if it wasn't for the controller on 126.65 letting the pilot of the
STA-Aircraft know.

If anyone has a more current list I would love to see one.
George
_____ End of Archived Posting _____

>
> I have a right to be indignant about you, who masquerades as having acquired
> all your freqs from Government sources.

Allan, get your quotes correct! Never once did I say "all my
frequencies came from Government sources". However I will say this,
ALL my ARTCC freqs, GHFS, and FACSFAC frequencies DID come from OnLine
Goverment Documents.

Allan, do something to help the hobby instead of putting down the work of others.

George

I have learned more from milaircomms website than from any of the
others. The webmaster at milaircomms shared more information with me
than I could get from anyone that I asked.

I wish the few who put down his site would just knock it off. We are
here to learn about scanners and get frequencies. George has help me
more than all of the bigshots around here. Allan did help me a
little with a few questions and it looks like Allan has a great talent
for scanning. George has helped me tons. George has put together a
website that is easy to use. And his is the only website I found that
has frequencies which work. Many of the other sites and lists have
thousands of frequencies making it very hard to find the ones that are
of interest. I think it would be one hell of a website if Allan and
George worked together for the betterment of the hobby. Just think if
Allan and George together build a site, just think how informative and
orginazed that would be.

Bill

12.5 kHz is a poor limit search step size to get Panasonic phones (you will only get every 6th channel) but it is OK for General Electric and other 900 MHz phones. 30 kHz is a better step size but the smaller the step the better, in multiples of 5 kHz. If you have a telescoping antenna, shorten it to about 6 inches or less, to make it as well suited as possible to the wavelength you are trying to pick up. Many cordless phones (about 50% of the ones in my area, anyway) are wideband FM, so choose this mode if you can.

Also, would any readers of this newsgroup be able to tell me what the regular ticking sound (about 1 1/2 times per second) is that you hear when you tune into some 900 MHz phones? (Hopefully this does not count as divulging what I might have heard on cordless phones). Note: I live in Canada, where it is legal to listen in on cordless phones, as long as other conditions are met.

I admit I am much more covetous of the Mil squadron's "home" freqs and
air-air freqs lately. If you look in the archives of milcom@qth.net,
flacom@yahoogroups.com, BrevardRadio@yahoogroups.com,
you will see that until the last couple of months I was a very prolific poster
of freqs. My daily logs cover a very active Military region: Patrick AFB,
MacDill AFB, Kennedy Space Center, Avon Park Bombing Range, and my posting
format ID not only the callsigns I heard, but the frequency handoff sequence
and air-air comms heard for Military flights.
I now furnish only some of those freqs in my postings and furnish the
others by personal request only. Whether you agree with me or not, I just got
fed up with George's thievery.
Check the archives and I think you'll agree.

If anybody's interested, there's a new Windows app for the PRO-93.
It's called "Win93", and can be found at
http://www.starrsoft.com/freeware/Win93/index.html

Supports P93 files, as well as text file read and write, upload and
download to and from the scanner, etc.

There are both GUI and command-line apps in the ZIP file on that site.

Yea, that's really help to a newbee to the hobby. You have to be "in-the-click" on order to get frequencies.... I thank that is what ticked-me off more than anything, they fact that the self-proclaimed experts are very inclined in helping the new comer to the hobby.

Granted you can (and he will as a few others) say "searching for the frequencies yourself is good". However endless hours of listening to nothing but static is a great way to welcome a newcomer to the hobby.

Why go through the expense and efforts of trying to detect you with a truck? If they walk over to the local Radio Shack and ask them who all bought radios in the last 10 years, they'll have a Name, Address, Credit card number for everyone who ever bought from the store.

However, any agency that worries about people listening in would have to be nuts. When you broadcast an unencrypted signal over miles and miles of terrain, you have to understand people WILL listen in. That just like the fools who use their cordless phones at home and then are supprised when the 10'oclock news tells them people might be listening. If you don't want people to listen in, don't broadcast unencrypted traffic.

Agencies who have secrets to broadcast don't use conventional analog radio... don't worry. Joe the cop also does not care if you know when he is going on a break. Often the cops are worried not so much about scanner users, but supervisors and recording. All trafic that goes over the air is recorded in many police stations, so when a cop wants to make a smart-ass comment about the chief, he'll do it on his cell phone. Or if he wants to chit-chat he may switch to "channel 6" to keep the main channel open for more important matters.

No conspiracy... just people being people.

.....and besides, them Virginia troopers talk funny! ("ayt" for out,
and "hyse" for house)
I once lived just below the Virginia border in NC. I thought I would never
learn to understand
the brogue of the Northeastern NC and Southern Virginia people.

At one time, North Carolina didn't have a reciprocal agreement with Virginia
so their tickets
didn "caynt", er uh, count. I knew a couple guys that worked over in
Norfolk, and the road that led from Elizabeth City, NC was long, straight,
and was basically a causeway built thru a
swamp; if you left the road, you went "dayn", er uh, down in de "swawmp" wid
de "wawtuh"
moccasins. These guys used to get their kicks getting the Virginia troopers
after them just
a couple miles from the NC border. When they reached the border, the
Virginia troopers
had to stop. Those crazy boys had pretty hot cars back in those days ('60s),
and the troopers
couldn't catch them (they changed cars pretty regularly).....until one day
the reciprocal agreement was reached and they didn't know it! So when they
crossed the NC border, they
were shocked to see that the Virginia guys stayed in hot pursuit--although
a bit behind!
To their dismay, NC had a road block set up to "welcome" the good ole boys
home! LOL!

Of course, Germany in 2002 isn't all THAT different in lifestyle from
the U.S. But there's also a copyright consideration. I seem to
remember reading on their website that certain TV programs could be
seen in Korea on base but couldn't be seen off base because a Korean
broadcaster had purchased exclusive over-the-air-in-Korea rights.

$350 might be a fair price, but I would strongly advise anyone buying a
rare and highly sought after item like this to use an escrow payment service or
perhaps an impartial party like a repuatble scanner dealer to do this
transaction.
Good clear photos and some explaination of how this 2006 escaped thousands
of bargain hunting Radio Shack employees scanning the discontinued inventory
lists every week, Radio Shack loss management people and millions of scanner
collectors all these years might help generate some serious offers too.

I have both "A" and "B" models and I can tell you that there is little or no appreciable difference between the two. Reports of the B version having improved filtering are unfounded. Both versions have the same IF filters (Yes, I looked inside). About the only difference I could find is the B model has slightly better AGC action on SSB. Otherwise, nada. If you're looking for a used 394, don't worry much about which version to buy. Just don't pay a lot of money for one. I still think the DX-398 portable is a better radio. If you get one for a good price, though, it's an ok first radio or for something to use on the bed stand to listen to BBC while you dose off.

hmm. wideband cordless's. Your in calgary. That is strange. I live in BC. haven't had one yet. but. Heck. stranger things have happened. I just scan at 5 k's if I find one that is off. say 12.5 or something. then I scan at 6.25 k's. I have had some strange offset ones. and some that are not exactly on frequency. Do you have a recording of just the clicking sound. It could be a few different things. I know of 2 off hand by guessing. but. if there was a small audio file of the click. taht be great. but. you would have to post it in alt.binaries. I think. 6 inches is about a 1/4 wave 430 - 450 Mhz . If I remember right. it may be a half there. so 6 inches is almost a full wave 900 Mhz antenna then.

Absolutely true. In fact, the over the air AFN-Korea channels broadcast the previews of stateside programs (generally one to two seasons old), and then state (different program here) in Korea. For instance, they do not run West Wing or Malcolm in the Middle here, but other programs that the Korean stations have not purchased rights to.

That's why I blocked Allan, due to his constant bitching and non-helpful attitude. I've been to George's site and found it quite helpful. First Allan called George a thief, then he complains that George used the official ATC list without adding non-published freqs from other sources (such as Grove). Can't have it both ways, Allan!

BTW, thanks to HPR for repeating Allan's drivel, otherwise I wouldn't have known what his response was about.

I have 5 BTX-126 UHF ht radios all on 464.5500 for sale.These are Motorola radios with Radio Shack name on them.They all work perfect.I only have 2 wall chargers for them.They are good rugged radios for the jobbers out there.I am open for reasonable offers on the whole package(5 radios and 2 wall chargers).I am in Mass.
Please don't insult me.I want to sell these or may do a little trading for good scanners.Email me is your best bet.
Thanks for looking

Fair enough if you're upgrading from a scanning receiver from the ice age, but referring back to my original post, I think either the BC245XLT (if you want trunk tracking) or the Icom R-10 (if you don't) are better buys. What I didn't say before is that I've owned several Alinco transceivers (DX-70TH, DR-605E and DJ-G5E) and have had problems of one sort or another with all of them. But don't take my word; check out some amateur newsgroups and read the postings on Alinco products for yourself. Then check out Icom or even Uniden (apart from the 2020...it was a dog) and I'm sure if reliability is one of you're criteria for buying a radio, you'll understand where I'm coming from. Cheers.

What about if it's replacing a RADIO SHACK Pro-62 from 7 years ago?? Is either the DJ-X10 or the DJ-X2000 at LEAST a good replacement for my old scanner? I realize that there may be other better scanners, but they also cost more money. What I REALLY want is a AOR 8200 MKII or the new Yupiteru, but they cost too much!. So is the DJ-X10 simply "worth" the money for what you get and definitely considered a significant upgrade from probably any scanner from 7 years ago ESPECIALLY a RS scanner minus the fact that scanners got MUCH SLOWER in 7 years, and I'm listening to mainly "Lo UHF", MilAir and HF??
"Are we saying that a 2002 Toyota Camry sucks and is slow, because we have brand new Jaguar? If we are, then we must realize that a Camry which sucks in comparison to a new Jaguar actually rocks if you are replacing a 1993 Corolla AND if you can't yet afford a Jag. "

"Paul Young" <young@ion.com.au> wrote in message
news:3C5C901A.908D8748@ion.com.au...
I had the Alinco DJX-10E for 2 years, I found this unit to be slow and deaf on some bands. I have since sold it and bought the Alinco DJX-2000E and I am glad I did.

"Viper56-FW" <junk@gordonvideo.com> wrote in message
news:vx278.60916$B94.11553790@news02.optonline.net...
I wonder if the current DJ-X10 is still deaf? I know it's still slow, but that just means I won't be finding any "new" frequencies with it. I'll also be a bit behind when I need to search several banks for activity during a quiet time...I guess that's why they didn't care to have convenient bank linking, because why would you really want to link banks on a scanner that is so slow? I would expect to be scanning only a few frequencies in one bank at a time with 5 channels/sec!

What do you think? Is it the same DJ-X10 from 2 years ago today??

"roughplanet" <roughplanet@optushome.com.au> wrote in message
news:3c5d25e6$0$11840$afc38c87@news.optusnet.com.au...
Hello. I had an Alinco DJX-10E several years ago together with an Icom R-10, and eventually sold both due to (a) their slow scanning rates, and, in the case of the Alinco, the 'selective deafness' the receiver exhibited on several bands. I recently bought an Alinco DJX-2000E, and frankly, whilst it is faster than the DJX-10E, it's not by a factor of 2 or anything like it. Also, the further up the band you go, the poorer the sensitivity becomes. At anything over 900 MHz it's 2�V @12 dB SINAD (NFM) and 4�V @ 12 dB SINAD (WFM) which are nothing to boast about. Mine's for sale if anyone's silly enough to part with AUS$1100. It comes with three (yes three) Alinco EBP-37N 700 mAH batteries ($95 each), the computer cable & software for Cloning or Computer Control, ($79) EDC-88 Fast Charger, (included) ESC-29 case ($30) and is boxed with manual & in as-new condition. The Bug Detector is a farce; whoever heard of a bug detector in which you had to know the frequency of the bug first! Hah! And likewise, the Frequency Counter only works with signals over 100 dB and even then, the menu settings you need to go through to get it to work are so onerous no-one could be bothered. This is a yuppie scanner & I'm sorry I wasted over $1400 for the thing. Because I'm honest I'll probably die with it. Anyone contemplating buying this unit, save your money & get an Icom R-10 if you don't want trunk tracking & don't care too much about the scanning rates, pay a bit more & get an AR-8200 MK II, or a lot less & get a Uniden BC245XLT. Any of them would be a better buy than the Alinco.

For all his other legitimate contributions to the hobby, George also
delights in shilling for Antenna Warehouse and "dissing" Grove at every
opportunity. This private sale of Grove merchandise provided George with
a temptation that was simply too great to resist.

I never understood that term "shill". I've asked Glenn Hansen as he was
the first I've heard use it. Seeing your both from Washington State are
you a "shill" (for what ever that means) for Glenn?

What ever, Anything I've said about Grove is true and can be easily
proven in writing.

As far as my connection with AntennaWarehouse I'm nothing more than a
customer who was very happy with that I received.

Thanks Mark and I'm glad you fine the site helpful. Actually once I
catch my breath I'll start adding freqs to the ARTCC list which aren't
found in the official FAA database but are currently active. I have a
list of a few submitted by readers.

Once think, after reviewing Grove's list I don't thing he printed any of
the unpublished freqs either. It appears he used the same faa file
that I did, I'm just not sure when the file was updated when he used it.

Thanks,
George

From: Paul Logan <Paul.Logan4@btinternet.com>
Message-ID: <a3l3a7$cu3$1@paris.btinternet.com>
Source record: 52816

Hi all,

I was just reading the posts about U.S. police being heard in Europe on 42 mhz, and I just thought I would let you all know just exactly how good reception is right now!.

Every evening around sunset I am hearing the California Highway patrol here at my qth in North Western Ireland. I am hearing the id's, locations etc so its no mistake!!. When one comes in there are usually others around.

The key to recognizing them is the office numbers used, plus the type of rapid fading which easily marks them out from other U.S. traffic from further east. It really is incredible to sit on the other side of the world and hear the dispatcher identify as " Golden Gate"!.

I have an amateur (not in the radio sense!) website with some info on long distance low vhf reception, and some loggings from here in Europe, please check it out.

There is also a list on there of the CHP offices listed by frequency, with their id numbers.

regards and good listening,

Since it's already a little off-topic anyway, I wondered if you had any more info about the interception? I was thinking about going sight-seeing over San Francisco sometime soon, and was wondering if these planes were actually doing anything wrong, or if they DOD is just really trigger-happy. It's already difficult enough to thread that air-space without getting shot down. I was just hoping to do a couple circles around the city under the northern veil of the Class B airspace.

Back to the scanner side, Sept 11 and beyond have been crazy days to listen to aviation radio, if you're not already doing it. The first thing I did that morning was turn on the ATIS broadcast for some of the local airports to hear about "all flights to all airports in the United States" being grounded. Even the days afterwords listening to the few lifeguard (air-ambulance) and police flights that were up there checking in with So. Cal (air-trafic control) was a trip... I have yet to hear anything too interesting on 121.5 MHz, but have heard tales of locals being interecpted, and have actually seen an F/A-18 being scrambled to the Temporary Flight Restriction area around our local nuclear power plant.

Any scanner people have any fun 121.5 MHz stories since the interception NOTAMs came out?

Actually, no one claimed it had never been opened. If it really is NIB, even if it was removed and tested when new or prior to shipping, I'd say $350 is still an acceptable price for this scanner. I'll admit it is on the high side, however consider that the owner is in effect taking a loss on the scanner offering it at the price he paid some 10+ years ago.

Bottom line is 10-12 years old doesn't mean it's outdated. The only scanner out there today that compares is the Bearcat 780XLT. Unless you need trunking capabilities, there is no reason the 2004/2005/2006 wouldn't suit a listener just fine.

I should know. I have two 2006's and my original 2005 that I bought new just before my local Radio Shack sold out of them and started stocking the 2006 back in '91 or so. I opted for the 2005 since at the time no one knew if the 2006 would still be modifiable for cellular coverage, a point that is all but moot today with digital phones. I ended up making out pretty good. My 2005 is as fast or faster than 2006's after I swapped out the oscillator with a 10.000MHz crystal and did the diode speed increase mod. The other specs are just about the same. Still can't find a reason to upgrade to the 780 though.

Having been involved in TV syndication, I think you are overcomplicating to say "every" nation had a different standard. Basically, we have had PAL, SECAM and NTSC in international usage. Variants have been fairly rare. You might go to the back of a WRTVH from a few years ago to see that there were more standards than you indicate.

Yes, I still have a Pro2006 w/Opto interface. But I still wouldn't pay $350
for it regardless of it's
condition. If it had the opto interface for $350 sure I would buy it.

Anyway as far as I'm concerned once it's out of the box it's Not NEW IN BOX
Anymore!

So, For $45 you will install a Grove Scanner Beam in my Attic ?

Hell I don't want you in my attic. Just give me the antenna and i'll
install it myself.

No, you won't, iso. The police simply provide (at high cost, but hey, the media makes lots of money, right?) real radios of theirs, programmed for recieve only, and only to decode the 'allowed' channels (no special ops channels, etc), to the media. Just like they do now for trunked systems.

I have an AOR AR-2515 I'm going to sell. It's in excellent condition and works great. Includes the standard antenna and AC adapter.

I haven't researched a price yet, so I'll entertain any offers.

Thanks!

Mike

> Thanks in Advance,Tom

Hey Tom,
I haven't posted to this group before, but I have done this mod.

First off, I made mine completly internal, with a variable resistor
not just for calibration, but for signal tracking. Anyway, it's been
awhile, but I do remember that when I first did it I had the same
problem as you, the stronger signals go backwards. To fix that just
reverse to wires going to the meter. As for your ground, I just solder
my ground lead straight to the metal chassis, and haven't had a
problem yet. As to the last part about D33 and TP2 its been so long
since I've had my 2006 apart that I can't remember. When I have a
chance to pull it apart I'll let you know.

> but referring back to my original post, I think either the BC245XLT (if
you
> want trunk tracking) or the Icom R-10 (if you don't) are better buys.

It seams the DJ-X10 is unbeatable for price/features as again I'm trying to find another scanner(because of X10's problems;speed/bank linking/battery) so I guess It is fact that I simply have a really crappy selection(more like no selection) for DJ-X10ish scanners. I either have to pay much more for "super scanners"(AOR 8200 MKII) or significantly less for some lightening fast scanner that won't cover HF/MilAir or I end up with a nicely priced R-10 "mini-scanner" which I consider a nice but wimpy scanner(size/sound etc).

I looked up the BC245XLT by the way...WOW! It seams like a SUPERB "update" to my old scanner as it is in the same class, but I want to "upgrade" AND "update" my scanning. So not only do I want today's technology, but I want to scan new things; HF/MilAir/TV. I REALLY don't know why the $360 DJ-X10 can't scan at even 30% of the BC245XLT's scan rate!!

I think I may just compromise due to a chain of thinking that YOU stirred up! I may just get the wimpy R-10, knowing how wimpy it is but planning to sell it in a year when I can afford what I REALLY want; the AOR 8200 MKII(maybe the AOR 8300MKIII???). I'll probably only use it as a second scanner at home though. I doubt the R-10 will stand up to much field use with me.

What's do you think the resale value will be of a 1 year old full coverage R-10 with full packaging including receipt and manual in "mint" condition?

I have no problem believing the NIB statement. I too, over the years had put
aside several 2006s NIB in an upstairs closet along with a couple Icom
R7000s NIB, knowing that they were no longer available. I have a couple
next my chair that I use everyday...and I have several NIB waiting.
I also would never take less than $350.00 for them.

There is no real reason to limit power of AFRTS-TV since they operate in
NTSC, while the normal system in Germany is CCIR-PAL. The difference in
Frame frequency, Vision-Sopund separation and color systems makes it
almost impossible for ordinary Germans to watch "lifestyle and material
goods they will never have".

Left Wing politcians are very much against American Culture although
local TV in Europe is heavily biased by US productions.

In the Netherland AFRTS only got its broadcasting licence for Camp New
Amsterdam (Soesterberg) as long as they transmit in NTSC an on CH A80
which is outside the European UHF band.

But an old B/W receiver could easily be adapted by me.
Adjust Vert Frequency and Amplitude.
Retune audio IF from 5.5 to 4.5 Mhz.
Surprisingly the Hor frequency of CCIR and NTSC is almost the same.
NTSC has 525 lines by 30 frames, CCIR has 625 lines by 25 frames.
The UHF tuner in most vcases has something extra that it receives ch
A80.

Whatched AFRTS many times, did not feel guilty at all.
Ruud

PAL only refers to the color system. The B/W base is called CCIR.
In Europe there are two main systems: CCIR/PAL and the French system
with Secam color and AM sound; only in France and Monaco, and partly
Luxembourg.
UK has a different vision/sound seperation.

Hi,
I am operating a Realistic Pro 57 and have foud it trouble free since I bought it. Lately I have noticed that on certain frequencies the reception was sounding cracky (like out of range). I lowered the frequency (164.220 to 164.215) and the transmission is a clear as wished for. I have had to do this with several frequencies. Can anyone tell me what this means with regard to the scanner.
Please reply via email. Thanks in advance

Nbussey

I was not clear enough; I was referring to such things as frequency
usage, number of lines, and other technical specs, not necessarily the
international standards such as PAL and NTSC.

I would suppose that the reason for low power AFRTS-TV is the
possibility of interference to other services using that portion of the
spectrum in the host country. I don't have a WRTH handy since my main
interest is HF (I have a Passport) so I don't know what the freq
differences are.

1970. New Scanner and Hobby

Please Help. I just purchased a Pro93 scanner with the software interface. I can't make heads or tails of this stuff and I am pretty computer literate. The software only lists up to Pro89 but I thought it would work on the Pro93. Guess I am wrong. Could someone help walk me through programming this thing either manually or with my PC. Thanks

I don't know a whole lot about the PRO-93, but if the software came with the unit, then it most certainly should be compatible... What is the name of the software, and perhaps someone could be of better assistance to you...

Mostly, the reason is to keep the signal from overshooting the target audience. The AFRTS TVs that have operated in Puerto Rico have all been very low power; there is no reason to keep the signal from being received by the general population (and PR has US standards and US channel assignments). The services simply don't want to spend money on covering non-military homes and they probably have to limit power somewhat because international program syndication would be interfered with.

In general, the AM and FM stations on the bases were set up so that they could not be heard more than perhaps a half-mile from the bases.

Unfortuanately, Radio Shack does not see an interface cable or a
software program that works with the PRO-93.

As far as the cable/program you purchased, return it for a refund. Even
if it has baeen opened they will/should return your money since they
sold you the wrong product. You may have to insist a little bit. I.e.,
scream and holler!

As far as a cable/program that works, this is a topic of major
discussion on the PRO93 discussion group at YAHOO.COM. Join the group
and you will learn quite a bit. There are now 2 free programs which can
be downloaded which work. The newest is by Don Starr, who has written a
similar program for the PRO-92. His program can be found at:

http://www.starrsoft.com/freeware/win93/

Cables can be purchased at pro93.com, or several other places, or you
can build your own. Check with the group at YAHOO.

Yet they include a brocure for a package, which supposedly works with
both the 92 and the 93, inside the 93's box. Of course, we all know
that there is no such animal.

There is a text bug with the Pro93 but on different firmware models. I am not even clear if the -newest- firmware version handles the problem. Again, go to Pro93 groups/clubs in yahoo. Read alot, ask alot, we are all there to help. Keep your receipt for the time being, just in case fo rthe text tag bug.

Supposedly, concerning the text tag bug, RS may be forming a program to help customers that may have the radio with the bug. No one knows when and how this program is to be placed and how it is going to handle each customer. Albeit to me it is minor since you have workarounds but still it would be nice to have it work correctly and tag EVERYTHING. I actually took back my pro94 to get the Pro93 simply for the text tag feature so I guess it SHOULD work like it was designed to.

It is a FANTASTIC radio, even with the bug. Read the manual a few times before programming. It is complicated a bit but that is inheirent with trunking. Once you get the grasp of the methods of trunking it isn't all that bad. It helps even for using and knowing what features it has and what the radio is capable of and what it can not do.

Hi I have a pro 51 and was tinkering around inside and noticed that it said the board parallel to the antenna. I assume this is a standard 800mhz convertor and was wondering if anyone knows any mods for these. It's a Uniden 1992 and therefore I'm hopeful. I think they still use these and therefore a mod could be huge.

William

It is a common word, found in virtually every dictionary. Your lack
of familiarity with it says as much about your general level of education
as it does about the appropriateness of its use.

> Seeing your both from Washington State

I hope your radio skills are better than your geographical ones!
Check the coordinates in my sig below (they were in my prior post). If
you think that is somewhere in Washington State, I have some beachfront
property to sell you!

> are you a "shill" (for what ever that means) for Glenn?

Hardly! He and I have crossed swords a number of times over the
years we've been regulars here. If you had been around for long you might
have noticed that.

> What ever, Anything I've said about Grove is true and can be easily
> proven in writing.

Yeah. Uh-huh.

> As far as my connection with AntennaWarehouse I'm nothing more than a
> customer who was very happy with that I received.

The fact remains that you have this unhealthy, obsessive-compulsive
thing about tearing down anything regarding Grove Enterprises. Maybe you
are unhappy with them. Get over it. Move on!

> George

Before I plunk down the dinero for an Optoelectronics OS-456 Lite, I thought I'd ask if anyone knows of a full OS-456 for sale, sans the obligatory PRO-2006. I'll be happy to pay a reasonable price.

Thanks.

You want to resubmit this message in a readable form? This time, include only a single thought in each sentence; ending each sentence with a period (or other appropriate punctuation mark) and beginning the next with a capital letter.

It's because you got the wrong software. You can't buy software for the 93 yet. Take that software back and the cable too, the cable won't work with the 93. Go here for free software http://www.starrsoft.com/freeware/Win93/index.html and go here http://pro93.com/ to order a cable that will work for the 92/93.

We have reduced the price to $199 !!! Get one while they last.

We have a supply of Optoelectronics 3000A Plus Counters. A very special purchase allows us to offer Optoelectronics 3000APlus top of the line portable frequency counters that are absolutely brand new, complete with accessories, still in the original factory boxes!. See more details at the ebay auction link below. Go to this link for details on purchasing one - http://www.datadeliverydevices.com/opto.htm or you can email me (remove all CAPS from the email address)

The Optoelectronics website has all specs, details
and the pdf manual at http://www.optoelectronics.com/3000a.htm

Why would u wanna listen to the highway patrol in the states form Denmark?
You'd have to have a massive amp and antenna. Anyways the NC one is
defintily right. I listen to them even though it's about as exciting as
listening to someone tell you about paint drying

Why have you asked the same question twice?

Anyway, it sounds like the frequency of the oscillator in the phase-locked-loop circuitry has drifted out of spec, and needs to be adjusted. Unless you are well acquainted with such circuitry and equipped with some high-priced test gear, I would think it calls for a visit to the repair shop.

What you may consider is buying a Pro2006/Opto combo and selling one of the
2006's.

Someone on the strongsignals.net classified board had one up for $375. You
could probably
get $250 or so for the 2006 on ebay which gives you the full OS456 for $125.

I'll come right out and say it. I do not like Bob Grove. More than
once he has "talked out of both sides of his mouth". Plus some of the
emails he personally had sent to me would have proven to be very
non-business or adult like.

Hi Erik;

If you have room in your scanner I would put in all the Cleveland ARTCC freqs listed. You might also be close enought to hear some high altitude traffic in the area controlled by Indianapolis Center (http://www.milaircomms.com/artcc_zid.html).

Next, what Airforce Bases do you have in your area? I might have some freqs for them if you can give me their names.

Also one of my next projects is going to be to have all the MidAir Refueling routes and freqs on a "clickable" map. Once that is done you should be able to find some useable freqs.

Don't know what scanner you have but if you have one which can receive AM in teh 138 - 144MHz area you might want to set up a scanner in search mode. 138 - 144MHz AM is where you can find a lot of Mil Air-Air Comms.

Im trying to decided which to mount on the roof.

Im either thinking of something like the Antenna Warehouse Scanner Beam

OR

A discone (Grove or Ratshack for example)

I am looking for something mainly for Air band (inc military) but also
decent all around coverage

Hi Dave,
I have both, the Antenna Warehouse Scanner beam and a Discone (also from Antenna Warehouse)

Both are good antennas. However the Beam does out perform the Discone without question. You might want to read me review of the scanner beam at http://www.milaircomms.com/review_scanner_beam.html In my review I do compair the beam up against a Discone.

It sounds like you want to pick up active frequencies without having
to enter them all in. Most scanners have a range search which
searches between a set of frequencies that you specify. The scanner
will scan EVERY frequency it is capable of. Look for a LIMIT or
SEARCH button. If it's a radio shack scanner, make sure to press PGM
first.

2011. PRO-2067 LIGHT QUESTION

Newsgroup: rec.radio.scanner
Date: 2002-02-05 06:32:25 UTC
From: n9mxt1@aol.com
Message-ID: <20020205013225.21017.00000065@mb-mi.aol.com>
Source record: 52778

Hey,
Just wondering if there is a way to turn off the darn light on the PRO-2067?
After a while of using the scanner, you know that bulb will burn out someday.

There a way to turn it off or a mod?

Please let me know...

Thanks

Jeffrey

Fair enough if you're upgrading from a scanning receiver from the ice age,
but referring back to my original post, I think either the BC245XLT (if you
want trunk tracking) or the Icom R-10 (if you don't) are better buys.

"Viper56-FW" <junk@gordonvideo.com> wrote in message
news:0Xw78.74919$B94.16351325@news02.optonline.net...
It seams the DJ-X10 is unbeatable for price/features as again I'm trying to
find another scanner(because of X10's problems;speed/bank linking/battery)
so I guess It is fact that I simply have a really crappy selection(more like
no selection) for DJ-X10ish scanners. I either have to pay much more for
"super scanners"(AOR 8200 MKII) or significantly less for some lightening
fast scanner that won't cover HF/MilAir or I end up with a nicely priced
R-10 "mini-scanner" which I consider a nice but wimpy scanner(size/sound
etc).
I looked up the BC245XLT by the way...WOW! It seams like a SUPERB "update"
to my old scanner as it is in the same class, but I want to "upgrade" AND
"update" my scanning. So not only do I want today's technology, but I want
to scan new things; HF/MilAir/TV. I REALLY don't know why the $360 DJ-X10
can't scan at even 30% of the BC245XLT's scan rate!!
I think I may just compromise due to a chain of thinking that YOU stirred
up! I may just get the wimpy R-10, knowing how wimpy it is but planning to
sell it in a year when I can afford what I REALLY want; the AOR 8200
MKII(maybe the AOR 8300MKIII???). I'll probably only use it as a second
scanner at home though. I doubt the R-10 will stand up to much field use
with me.
What's do you think the resale value will be of a 1 year old full coverage
R-10 with full packaging including receipt and manual in "mint" condition?

I think your R-10, in the condition you mentioned would only drop about 20%
of its value after 12 - 18 months. Most scanner buffs know the unit & like
it, so they are quite easy to sell. I bought mine for AUS$550 second hand
(but in mint condition), had it almost 3 years and sold it for $550, same as
I paid. Only difference was I included the cable & software for programming
the little bugger, but still, it shows what a good buy they are.

If I understand what you're seeking...

Have a look at the Optoelectronics Scout. It is a frequency counter that can couple to certain radios providing a feature Opto calls "reaction tune". Any frequency that is in use *that is detected by the Scout* will be sent to the scanner via a connection cable and the scanner will tune to that frequency. Among possibly others, this feature is available with the Icom R10, the AOR 8XXX series and the Uniden BC245XLT. A particular connection cable is required by each of these radios for this. The simplist is that for the R10, as the Scout uses Icom's native signaling method, CI-V, thus avoiding the level converters required by the other models. If you already have the Uniden radio, ScannerMaster www.scannermaster.com makes a connection cable for US$80 called SmartLink. Be warned, though; there are practical limits as to how the Scout detects and records frequencies, so I suggest a white paper, "Counter Intelligence", available on the Opto web site. Though this set up sounds like heaven, it depends on the Scout's ability to discriminate a particular signal from a spectrum awash in signals. It's nice when it works, but it doesn't work in every situation.

I ordered an Icom R2 from Burghardt's in South Dakota Friday. UPS had it out for delivery in Nebraska yesterday. Then they deleted that mistake from this list. It's supposed to end up near Indianapolis. Hope they don't refuse to deliver it since I filed a complaint about the last delivery. Maybe I should have asked Burghardt's to USPS it. :)

The AFRTS-TV transmiter in the Netherlands (Camp New Amsterdam,
Soesterberg) had a 1000 W ERP on CH A80.
The FM transmitter reached beyond the camp and was even fed into the
Utrecht (4th largest city in the NL) cable system!
AFN radio was very popular in the region, and I still regret the closure
of Camp New Amsterdam.

Korea also uses US channelization and modulation. There are AFN/K TV transmitters all over the place, several in some areas (such as mine, where there are two translators receivable). The main station is a UHF in Seoul, I forget the channel, and AFN/K is carried on the Korean cable systems all over the country as well. There is one 3KW FM outlet in Seoul, which does a good job of covering a 60 or so mile radius, and smaller outlets, generally between 10 and 40 watts originating on or near the military compounds. Interestingly, some of the "local" outlets carry locally originated programming rather than the satellite fed AFRTS programming.

Which is better: a focussed directional antenna that you have to steer
all the time, or an omnidirectional wideband discone?

You might as well ask which fruits are better: apples or oranges.
Both antennas have a purpose. If you can only put one of them up, the
discone is probably easier and cheaper to deal with. However, the
scanner beam will probably do better at picking up distant stations
with less IMD than you'd get on the discone.

The key is whether you know in advance where to point the thing.

President Bush Addresses Florida ARES Net

NEWINGTON, CT, Jan 31,
2002--President George W. Bush spoke today via Amateur Radio to members
of the
Northern Florida Amateur Radio Emergency Service Net (NFAN). The
president was in Florida to spotlight five volunteer groups--among them
the Volusia County Amateur Radio Emergency Service (ARES)--for their
value to the new Office of Homeland Security.

"I want to thank all the volunteers who help make sure that Florida is
prepared for any kind of emergency," the president said in part, after
checking in around 9:15 AM to a regular ARES net session. "I want to
thank you all for helping your communities be prepared." (The text of
President's Bush's remarks is available below.)

Northern Florida ARRL Section Manager Rudy Hubbard, WA4PUP, said Bush
spoke
from a portable station set up at a Daytona Beach fire station. Hubbard
said that when
Bush's visit was announced, Volusia County's emergency manager got in
touch with the county's ARES Emergency Coordinator Joette Barnett,
KG4HPN. She, in turn, contacted John Schmidt, AF4PU, and Clifford
Fraser, KE4HIY. They arranged to have the station ready as a
demonstration of Amateur Radio's role in emergency preparedness and in
the hope that Bush would be willing to take a few minutes to address the
75-meter net. NFAN meets daily at 9 AM. Hearing the president check into
the net was a pleasant surprise, Hubbard said.

ARRL President Jim Haynie, W5JBP, said he was "extremely gratified" that
President
Bush recognized the valuable service Amateur Radio operators provide in
times of
emergencies. "Volunteerism goes straight to the core of all radio
amateurs who provide their communication skills, time and equipment in
times of communication disruptions," Haynie said. "I know that all hams
in the United States stand ready to do their part in America's Homeland
Security Program." Haynie, who was re-elected this month, has said that
defining Amateur Radio's role in homeland security would top his list of
initiatives for his second term.

Hubbard said a copy of proposed expanded Amateur Radio (PRB-1) antenna
legislation was given to the President and to the president's brother,
Florida Gov Jeb Bush, for possible introduction in next year's Florida
legislative session. "We Amateur Radio operators will volunteer however

we're needed, and maybe it will be seen that we can greatly help the nation if we have the antennas we need," Hubbard commented.

The proposed bill would seek to have the Florida Legislature extend recognition of "the importance of Amateur Radio and the need to accommodate amateur radio emergency communications through erection of outdoor antennas of reasonable size and height" to private deed covenants, conditions and restrictions as well as to municipalities, now covered under Florida's existing PRB-1 law. As drafted, the measure would require local ordinances and land regulations as well as private deed restrictions, or covenants involving the placement, screening or height of antenna structures to "reasonably accommodate amateur radio communication" and "impose the minimum regulation and restrictions necessary to accomplish clearly defined
objectives of the local government, association or property owner."

The Daytona Beach event marked a rare appearance on ham radio by a sitting president. Former President Gerald Ford spoke via a ham radio satellite hookup in 1986. In addition to Volusia County ARES, Bush also spotlighted Citizens on Patrol, a retiree group that patrols communities for the sheriff's office; Citizen Emergency Response Team, which helps coordinate neighborhood disaster response; the Council on Aging; and the Volusia County Fire-Police Volunteers. Bush's stop in Florida was part of a swing through the southeastern US, which included stops in North Carolina and Georgia.

Try Selfridge AFB in Michigan - their AR routes and some MOA's may reach
you in Western Lake Erie.
Pittsburgh Intl AP also has STEEL refueling tankers of the PA-ANG

Both are about 120 miles from Cleveland area

Andy,

NJSP use a Motorola Type IIi trunked system. This sytem has both type I and
type II users. The talkgroup ID's for Toms River/GSP area are 000-15 (GSP
Holmdel Type I) and 26960 (GSP Bass River Type II).

Good Luck,

Jim

As usual it screwed up at the automated CACH hub, it all robotic
UPS employees call CACH the Bermuda triangle, you dont know whats going to
happen.
Packages get dropped, lost, smashed, sent to Alaska.
If the radio arrives in one piece you got off easy !
UPSing or :OOP's-ing" on a lightweight R-2 was crazy,
Good luck with you new radio.

Well, I used to have the owners manual to mine; I bought mine back in the 1970's from the Speigel catalog!

I've just gone through the garage and cannot find it! I'll keep your posting on file. I know it's not something that I'd throw away. The best I can recall is that you hit the "manual" button, then punch in your frequency and hit the "e" button for "enter". Then hit the manual button again, that will send you into the next available channel for programming.

Just for "grins" let me pass this along to you. One of the best scanner repair sites is the following:

www.iinc.com/ggcomm/index.html

They are in New York State and were a great help to me; perhaps they can help you. Meanwhile, if I find the book, I'll contact you again

2034. scanner damage using company radio?

Newsgroup: rec.radio.scanner
Date: 2002-02-05 20:45:35 UTC
From: emoney250@aol.com
Message-ID: <20020205154535.07991.00001141@mb-mu.aol.com>
Source record: 52703

I use a magnet mount scanner which is mounted on the frame of my bobtail truck (well below the roof line). I have a 400 trunked radio system for my business radio where the antennae is mounted atop the roof. When I transmit the company radio, I get a hiss interference sound (this comes in on the trunked frequency only-which I have scanning on my scanner) when I transmit on the company radio. I know there are diodes and all sorts of stuff I know nothing about in radios/scanners. Is this potentially damaging to my scanner. If so, would turning off the bank where I scan these trunked frequencies (while transmitting on the comany radio) resolve the issue? Thanks for the advice.

A beam is directional, with gain on one side, and attenuation on the other, and depending on design, can be wide, or narrow band. This can work for you, or against you, depending on where you point it, or if you have it mounted on a rotor.

A discone is usually no-gain, non-directional, usually with wider band coverage.

Actually the government is going on the biggest spending spree ever.
They are fueling the economy with their spending. A lot of Homeland
Security funds will trickle down to communications for various areas.
I assume that encryption will be sold (sales pitch) to customers of
every new radio system as a secure "Homeland Security" communications
system, and I assume most ignorant politicians may fall for it for
security reasons. He doesn't work in sales and won't speculate if
they'll try to push these more exspensive encrypted systems after
9/11. I'm sure the sales of encryption will go up, but that's my
speculation.

Using a high power transmitter CAN ruin a scanner. I had a handheld
trunking scanner mounted in my van alongside my Icom IC706MKIIG rig.

I transmitted (100 watts) on 50.125 mhz one day and blew the scanner's
800 mhz front end, ruining the scanner. The antenna for the scanner
was a mag mount about 12" from the HF antenna, also a multi band
mag mount.

An expensive lesson.

I have an excellent setup that works great for me & it is under $50.00.
There is a commercial dualband antenna available from a guy in Louisiana
that retails for ~$22.00. It is cut for 150/450 commercial bands & has 3dB
gain on VHF & 6dB on UHF. He also sells 5" magnet mounts for ~$20.00
with 17' of coax & a soldered PL-259 connector. These antennas are
excellent! The quality & performance are superb! He is also on eBay &
I will include his master listing URL so you can see the items I am talking
about:

His name is Jerry AD5AQ
Email address is pixmann2@yahoo.com
Palmetto Antennas
1107 Gains Ave
Ruston, La 71270

His eBay Master Listing:
http://cgi6.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=pixmann&inc
lude=0&since=-1&sort=2&rows=25

You will not be disappointed. He sells an excellent antenna line. Tell him
Rafman sent you! Enjoy!

Hello to the group and thanks for the many hours of enjoyable reading.
I just purchased a new BC895 scanner, it is so new the wife doesn't even know I have it.

I am in need of pinout information for a remote cable and is there any shareware freq. loading software? I will purchase one of the operating software packages when it becomes clear which one I want but, until then it would be nice to use the computer to load the puppy up.

Also, does anyone have a favorite scanner antenna. My most listened to bands will be aircraft both VHF and UHF.

Again, thanks for all the information that flows here and thanks for your help.

Bill, N5WO

I also saw here where UPS is in favor of some new, 432 mhz RF ID tags for their stuff, with very high power levels that will likely screw up the 70cm band for amateurs. I believe they are already responsible for hams losing part of the 220 mhz band, so why don't we all just stop shipping with them altogether?

I switched to USPS during the UPS strike, and have never wanted to go back.

My BC-895XLT works great with discone and Beam antennas. I am not aware of
any free control programs. I use ScanCat Gold-SE (the SE a waste of $).
You can also buy the cable made-up at Grove and other distributors.

The interface is a 5-pin PCB header (.025" square pins on 0.1"
centers).
The mating socket is standard (RadioShack.com's Cat# 910-1471 is 25 cents,
plus 24 cents for 3 contacts), but a segment cut out of a DIP socket will
work just as well. The pinout is symmetric, with pins 1&5 (the outer ones)
carrying data in (to the radio), 2&4 are data out (from the radio), and
pin 3 is ground.

The cable connections are:

BC895 DB9 DB25
1 <= to radio 3 2
2 from radio => 2 3
3 <= ground => 5 7
(TR-CD-DSR) 4-1-6 20-8-6 *
(RTS-CTS) 7-8 4-5 *

* If you will be using a standard communication program, add the two sets
of jumpers in the RS-232 connector to simulate the normal control
signals.

The comm protcol is half-duplex, 9600 baud, 8/N/1. Commands to the
radio
should be terminated with a C/R only.

I shipped a Sony 7600G, in MINT cond. to CA about two years ago. The box
came back empty. Someone in the PO stole it. They refused to pay off. Other
than that they've been ok for me. :)

2052. WTB: Knobs for Regency Scanner..help !!

Newsgroup: rec.radio.scanner
Date: 2002-02-06 01:31:43 UTC
From: klarrg@aol.com
Message-ID: <20020205203143.23414.00001346@mb-fh.aol.com>
Source record: 52723

Need the ON/OFF switch KNOB (switch cover?), for the older REGENCY Z-10 desktop base scanner. The control knobs for the Z-30 and Z-45 will work. This is the small square "cap" that fits over the sliding ON/OFF switch and allows the user to turn on & off the radio. It is about 1/2 in. square and made of black plastic.
Please Email me if you have such a critter, and I'd also be willing to buy all 3 control caps if you have a set off your D.O.A. or junked Regency "Z-series" scanner.
Many Thanks for your help !

2053. Uniden MR8100 experience?

Newsgroup: rec.radio.scanner

I have recently purchased a Uniden MR-8100 Scanner. I was lead to believe
that there is aftermarket software that will allow programming the scanner
out of band.
I am not interested in cellular as that can be done with the Uniden provided
software.
Has anyone used software to program out of the normal parameters of the
MR-8100.
thanks,
mark

Help! Help! Help@ This PM I installed a discone antenna I bought from antennawarehouse. I'm using a RG6-U cable (100 ft). I get absolutely none of the frequencies that I used to get with my Telescopic antenna (Realistic 2006 Pro) As soon as I reconnect the telescopic antenna those frequencies are received. I thought that with a roof antenna my reception in supposed to improve not worsen. I called Antenna warehouse , they told me that the coaxial most likely has a short in it. I don't have equipment to test that. Can some one tell me what else may be going on. I'm in the Northeastern coast of the US. TIA

Sounds about right about the short. although, RG6 (I belive) is 75 ohm and it should be 50 ohm like RG58/9u or RG8 . I dont think it would attenuate the signal that bad. buy a cheap ohmmeter somewhere and check it out.

There's only two ways to troubleshoot: Substitution or test equipment. You either have to buy another cable or a volt ohm meter & a book on how to use it. Both cost about the same, you'll profit for many years by going with the second choice. Other than stuff you can obviously see (not conected, cut, kinked wire), the only other possibilities are a bad antenna (which should have been easy to spot even for a beginner when you assembled it on the ground, there's not much to miss that could be shorted)) OR a bad external antenna jack on your radio. Solder joints inside the rdio can crack, sometimes just from temperature cycling. A 2006 has been around for lots of that! You CAN check for this by touching the center lead of the coax to the (collapsed) rod antenna & see if a

weak signal gets better. Try a weather service channel that is just noisy with the rod as short as it will go. If it suddenly clears up when you touch the center lead to it, this would indicate the radio jack is bad.
But the shorted cable is FAR more likely anything else.
Neutrodyne

2063. ATTENTION! Now is the time to ask to revoke the '94 block on "cellular-capable" recievers

Newsgroup: rec.radio.scanner
Date: 2002-02-06 02:55:27 UTC
From: William Ferguson <spyderkeeperREMOVEMEIFNOTSPAM@yahoo.com>
Message-ID: <u616p0do0p5k53@corp.supernews.com>
Source record: 52732

As the cellular industry slowly goes to more and more digital, the scannist argument about an open 800 mhz band is more feasible. I encourge you to express your oppion to mpowell@fcc.gov (the chairman of the FCC) or go to the website www.fcc.gov and find someone to talk to.

2064. Re: ATTENTION! Now is the time to ask to revoke the '94 block on "cellular-capable" recievers

Newsgroup: rec.radio.scanner
Date: 2002-02-06 03:08:10 UTC

Message-ID: <u617gpoc4b2030@corp.supernews.com>
Source record: 52733

This is what I wrote:
Dear Mr. Powell,

As more and more cellular companies switch over to a digital cellular system, the ban on the selling, manufacturing, or importing scanners capable of full 800 mhz coverage makes less and less since. Now, given the fact that it is the transmitter's responsibility to make sure their signal is secure if it's penetrating everything, the cellular phone industry has finally taken some legitimate steps to actually secure there networks. I'm a cellular phone owner, and I don't want someone prying in on my calls. I'm at the same time conscience of the scanning communities rights, but I'm more concerned about those who are told that the so-called "secure" cellular networks are actually secure. This does seem strange that people would bother to try and get cellular-capable scanners if it's all digital, but scannist are sometimes strange. Just as a Corvette owner doesn't want a 75mph limiter even though it's illegal to go over that speed, we scannist don't want a limited scanner. The laws hurt the scanning economy as well because instead of going out and spending $350 on a new Uniden BC-780xlt they're buying off places like ebay an "easily modifiable" scanner for a close price, or even importing one from another country at inflated prices and shipping. If you really want to do the consumer a favor, lift the curtain that makes cellular users think analog is secure.

Take the antenna down, get a short piece of Coax and hook it up to your
radio. See if you get signals on a different piece of coax. This
will confirm it isn't the antenna or connector on the antenna.

Either you have a short or you have an open in your 100' of coax, mostly
at one of the connectors. Sometimes PL-259 (at the antenna end) and
BNC (at the scanner end) are hard to install without getting a short
unless you have lots of practice.

I have an AntennaWarehouse discone and it is a great antenna.

I am running MDT Monitor for Windows but it says "to use this program you'll need a scanner with a discriminator output." Ommm what scanner has a discriminator output on it? I own a PRO-2006, PRO-2067, IC-R2, and of course all my Ham gear. Or where can you get a discriminator for this program to work?

Hope to hear from someone soon so that I can check this program out.

It might just be attenuation. I found my discone works no better than
the stock antenna with cable longer than 50'. With 100', I doubt mine
would work well too.

2075. HELP: AR8200II (DEL MENU)

Newsgroup: rec.radio.scanner
Date: 2002-02-06 04:49:12 UTC
From: "Michael A. Nunes" <p@pcmike.net>
Message-ID: <7vc16u823ajpfph4hm37ms67tne17hraon@4ax.com>
Source record: 52743

Hi guys, I just recieved my AOR AR8200II and I'm beginning to understand all the features real well. I am having one problem though!

PROBLEM: Whenever I am in SCAN mode I sometimes PASS a channel; but when I try to remove PASS on all the channels within a bank, the option is not there.

The manual says to go into the DEL menu by hitting FUNC and then DEL while in SCAN mode, and then hit the down arrow six times. The only thing that results in for me is 6 beeps (i.e., it doesn't offer a delete menu, just the option to delete the current channel/freq). This is only the case in SCAN mode, the delete menu appears as normal in SEARCH mode.

NOTE: The manual also says there should be a delete menu in VFO/VFO-SEARCH mode, but here is not. Hitting FUNC and DEL just results in a beep (i.e. no menu).

Anyone know how to fix these problems?

- pcmike

Jeffery the discriminator is a part of any FM rig. It is the
first stage where audio is generated. MDT mon requires audio
from this stage in your rig to maximize bandwith for decoding
purposes. Most FM rigs process the audio after the discriminator
to make it sound better. These processing stages are usually
after the audio amp but sometimes before or both!

Modifying the radio for a discriminator output involves reading
the rig's schematic and tapping the circuit before the audio
amp. You don't need any special hardware - just some sheilded
audio cable (or RG-174) to run from the tap to the outside of
the radio. On my Bearcat BC780XLT, I was able to install a phono
jack in the back of the radio for this output. I then fed it
to my soundcard and bingo!

Good luck!

2079. tk545 v1.1 open source software for JRC NRD-545 receiver

Newsgroup: rec.radio.scanner
Date: 2002-02-06 05:11:02 UTC
From: Bob_Parnass_AJ9S <parnass@megsinet.net>
Message-ID: <3c60bc7b$0$35570$272ea4a1@news.execpc.com>
Source record: 52746
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,alt.radio.scanner

Version 1.1 of tk545 is now available at:

http://members.core.com/~parnass

tk545 is open source software designed to control
and clone the JRC NRD-545 receiver. Programmed using Tcl/Tk,
it runs on Linux, Windows 98, Windows XP, and MacOS X.

(You must install the free Tcl/Tk interpreter prior to running
tk545. See web page for instructions.)

Experimental version 1.1 includes these new features:

Added facility to log and timestamp frequencies, signal
strength, mode, and optional comment.

Added the ability to choose a different font and colors
for the program graphics.

I don't warrant the software, but it won't cost you anything.

Ok, I just downloaded the list of NJSP frequencies and attempted to enter the trunked frequencies in my Pro-90 Trunktracker. I am in Toms River, using an external scanner antenna and I don't get anything on these freq's... my scanner just keeps looking, not finding any control freq's... does the NJSP use some other sort of trunking capabilities that my scanner won't pick up?

I haven't really had a lot of intermod problems.. of course, the first thing I did was to lose that stupid stock antenna, and put on a telescoping antenna that I could raise and lower to handle different bands/signal levels.. the thing was virtually deaf below 8 MHz with the stock antenna.. with the one I'm running on it, it works great. :)

From: jedimacewindu@yahoo.com
Message-ID: <acd5210a.0202060246.25fccd51@posting.google.com>
Source record: 52656

Greetings!

Hi all. One of my favorite pastimes is catching up on old usenet/google postings archived, and tonight I thought I would check out my beloved company's rep on the groups. Imagine my non-surprise at the number of anti-shack stuff out there. Imagine even more my agreeing with most of it.

Some background: I'm a 23 year old part-time college student who's taken the last year off after changing a major. My roommate at the time of my leaving school was an Assistant Manager with RS, and he encouraged me to give it a try. I needed a job to support myself, so I figured what the hell. After all, I went to RS as a kid, and it can't be that much different, right? After the last year, I can say it has been the worst experience of my life, on both sides of the counter- with the bosses and the customers.

First, the job. I work in a store that pays a commission rate, or the absolute minimum wage. You have to make enough money to make a good Dollar Per Hour rate just to get that commission, which most people are unable to acheive. The thing is, that rate is almost $100 an hour, at the least. When I was growing up, the local Radio Shack was a parts store- how can someone be expected to maintain a $100 per hour rate selling only parts? Answer: you can't. And that's the crown jewel in RS's big lie- "You write your own paycheck." There's no incentive anymore to learn about the parts, since they don't help the paycheck all that much. You need incentive to have the knowledge, and that knowledge these days: cell phones. That's what we're trained to sell. Forget DTH, RCA, MSN, whatever. Phones are the focus, the real deal, the main event. That's why you get offered a phone every time you buy a battery at RS. Because the employee behind the counter needs to sell that phone, or make minimum wage. Pure and Simple. And guess what? That's what the associate should do. The problem isn't with the associates- they're the products of a training program gone horribly, horribly wrong somewhere.

We get scantron tests that give broad overviews of each section of the store. The parts section has no more emphasis than the cellular phones, or the customer service. You can take the tests as many times as you want, with no penalty, until you pass. It's ridiculous. I came into the job expecting to learn a bunch about electronics, but everything I've learned, I've learned from my own research and from the customers. Very little from my bosses. I remember one of my first days there. I sold a very nice gentleman an outdoor antenna, and was about to ring it up, when my boss came out and started asking a series

of rapid-fire questions of the customer, and determined that I'd forgotten to include a grounding rod, antenna wire, and other items that the customer did not have. And why did I forget these items? Because I didn't know. Because they didn't care that I didn't have adequate knowledge on the floor. They put me out there without proper training simply because an antenna like that, while profitable to the company, isn't the real profit like phones and DTH are.

Monthly meetings never focus on topics other than phone sales promotions, DTH sales promotions, and other crap that teaches nothing about the actual product itself. It's simply assumed you know it, or you'll learn it. But that's our training. There's simply no incentive. I've taken it upon myself this last year to bring myself up to speed on as many products as possible, to become as knowledgable as possible about each particular item. It makes me sad to realize that the guy down the street, who can't even program a scanner, is going to make more money than me because he's better at selling phones. And that's where the system is broken. It's broken at the top, and it's pretty hard to fix.

Radio Shack DOES NOT CARE about the people that got them to where they are today. It's that simple. Employees who try to care do so on their own time, at no benefit to themselves besides personal satisfaction. And, I'm sorry to say, customers are a problem as well.

Let me say that I'm pretty impressed with how articulate all of you are on this forum. It's unfortunate that I can't say the same for the customers in the store. Many customers are rude, short, and nasty to a sales associate's face, frequently without provocation. It helps build the apathy around you if you work there. People who bring in repairs, even if you can fix them on the spot and even prove it was their fault, are frequently rude. People who 'rent' our items for short periods of time, and then bring them back claiming false problems after using the item for it's one intended event are numerous. The only person hurt by any of this? The clerk in front of you. The corporation punishes him by taking away his sale and comission.

Now, of course, if a clerk gives you incorrect information, or sells you a defective product, you have every right to a return. That's not what I'm talking about. Radio Shack associates are frequently harassed, cussed at, threatened, and screwed over in numerous ways by the customer and the company itself. I've lived it. I was very nearly fired last year for reacting, finally, to a customer who called me a name I won't repeat. And this customer was treated like a king by our corporate office, since of course, it isn't possible that the customer was wrong, was it?

Name and Address. Every Radio Shack employee hates those words. Please, if I can ask any favor of you as customers, if you wish to decline, please do so politlely. You'll make our day. Again, the employees are the ones screwed over- if an employee maintains a N&A below 85%, it is a terminatable offense. That employee is asking

because it's his job, and it isn't good for him when you say no. That being said, I hate it, I think it's the stupidest thing we do, but we are all judged on it. So, if you have to decline, which is your right of course, a simple 'No thank you' with a smile actually makes my day a lot better. Should we be ranked on our name and address? Should it influence whether we keep our job? Of course not. But remember, you're not getting Len and the boys upstairs, you're simply costing the sales clerk in front of you. Being polite and friendly is a nice way to ease through it. Don't rudely say 'cash' and shove the money at the associate, don't make something up, and don't go on a rant about how we don't need that info. We know. We've heard it all, and most of us agree with you. We still have to ask. Please, on this point, I beg you all to have pity on the RS employee. It's appreciated, I promise you that. And if some idiot gets pissed at you for it, let loose on him with both barrels. We owe you the same courtesy you give us, and anyone who doesn't give that courtesy doesn't deserve it in return, on both sides.

Anyway, I thought I would get all that off my chest, for this reason: I am leaving the Shack at the end of the month. Until then, I'd like to continue to be the best associate I can for all the customers that walk through my door. So here's what I'm asking all of you, if you could answer this question:

How can we be better? Keeping in mind I can't change the prices, how can I be a better sales associate for you guys? I consider you all the true customers, and I'm actually serious here: what can I do that will make you feel more comfortable to shop at my store? What are some experiences that you've had that you've liked? Disliked? Give me specifics. I'd really like to know. Now that this whole, bitter experience is winding up, I'd like to sprint for the finish line with a good attitude.

I'd like to say thanks to anyone who reads and responds to this fairly long post, which is probably off-topic for this group. For that, I apologize.

Sincerely,
RS Employee

Could Be, but this is the name they (US Army) used for the site. Was on the signs. Soesterberg is still an airbase, in use by the Dutch Air force.
(Brooklyn and Breukelen.)

New York was once swapped for Surinam by the Dutch....
Ruud

I have a pro 46(the one that was called back and reworked to disable the 800 mhz test freq.). I have done the mod to restore the test freqs. My question is can this radio be modified for full 800mhz without using the test freq.
I know the first pro46 you could move 2 transistors to restore full 800mhz but will it work on the second version of the pro46?
Thanks

There's nothing he can do about it. It was legislated from Congress.
His hands are tied.

If you want to make a case on it, you can write to my favorite
Louisianan politician, that undeniable jackass and all around demagog,
Billy Tauzin. And by the way, if you want him to change his mind, be
prepared to pay his campaign more money than the CTIA paid.

Mr. Tauzin's vote usually goes to the highest bidder.

That's just my humble opinion. My apologies to the people of the
wonderful state of Louisiana. You're not the only ones who have
obnoxious representation in Congress.

Do you receive any other frequencies on your setup?

Is your antenna working OK?

Have you tried it with the supplied rubber duck antenna?

Do you receive anything in manual mode?

Have you properly programmed in as a MOTOROLA Type I system with the
S13,S13 fleet map? (Actually, it is a Type IIi, but let's get the Type I
part working first.)

Do you receive any of the other local trunked systems?

I just have to congratulate you. Your message really make me re-think my behavior. Well, I live in Costa Rica, Central America, but here in my country we have almost all the franchises that you have in the States. And yes, WE HATE how McDonalds personal always try to sell us a VALUE MEAL, a LARGE VALUE MEAL, how Subway personal always try to sell us extra cheese, extra ham, extra...
And I am most of the time mean to the people, because I think, damn, can you just shut up and just sell me some fries! But well, I understand its their job and we should blame the corporations like making their personal seem like clowns or robots...
Now on the Radio Shack stuff. Radio Shack HAS NEVER BEEN my favorite brand. In fact, Radio Shack has an awful reputation on my other hobby: Car Stereo. Radio Shack car stereo equipment is at worst as it can get. Nobody who is serious at that hobby even thinks about RS. When I was looking for my first scanner, I got stuck into two models: Uniden bc245xlt an RS Pro-93. I was at first amazed at how actually a RS product was a good one this time. I almost bought the Pro-93. Then I read and read all over the internet and heard about the bug problem, the actual position of RS telling some customers they know about the bug and that the customers would have to go the RS store at some given time to ask for a fix of the bug, also about some problems with customers who said their Pro-93 was DEAD ON ARRIVAL or that their screen just went blank and I tought, ...hmmm Radio Shack again...that seems familiar...
and yes...call me all you want to but I then decided to go with the Bearcat because of Unided better reputation and of its ease of use and available software. But how sad it is? Actually a factor I considered in not buying the Pro-93 was the reputation of Radio Shack!
I have always tought of Radio Shack as some cheap company that only make bad clones of similar products made by some more reputable companies. Thats why in Radio Shack you can buy almost anything, from a telephone to a radio to a television to a dvd...hmmm...but you would never find.
Im not saying RS scanner are bad. As I have heard they are pretty good. But the bad reputation of RS has definetely kept me apart from buying a scanner from them. This and of course the alleged problems that the Pro-93 has had.

Some examples from years gone by:

Clarinette all-in-one stereo systems (woefully underpowered amps and cheap paper-cone speakers.)

Archer CB antennas (inferior-grade aluminum. Bends or breaks in the first wind storm.)

Nova headphones (more cheap paper cones. Awful sound quality.)

Micronta power supplies (weak transformers...only put out 1.75-2.5 amps vs 3-4 amps by similarly-priced competitors.)

I'm sure y'all can think of others!

Not knowing if you're looking for a base or handheld my first suggestion would be the Uniden 780XLT (Base). I've had one for a few months and LOVE it. 99.9% of my listening is MilAir. If you're looking for something that cost less, then find a used RadioShack PRO-2035 on eBay, usually going about $200 - $240.00. I have two of them and they're really good too.

I can't offer much in they way of handheld suggestions. The only heldheld I use for MilAir is a PRO-26. Good radio but only 200 channels.

You can see my entire shack at: http://www.milaircomms.com/shack.html

I would like a recommendation for an online antenna dealer. I had an order with Exportradios.com and was finally able to cancel it.
I'm looking for a Hustler magnetic mount model MRM to use with my Pro 2067, or something that works well in the 148-174 and 430-450
range.
TIA

Rg58/9u would be far worse than the RG-6. Yes rg-6 is 75 ohms but for
the 1,000,000,000,000 time, IT MAKES NO DIFFERENCE TO YOUR RECEIVER.
RG6 triple shield is far better than any of the 50 ohm cables you have
mentioned, period.

Hello everyone!

I have now owned the Radio Shack Realistic Pro-70 for many years.
This is my first real scanner. I now want to experiment some on it.
Is there any mods for this radio or can someone might tell me where I
can find the discrimiator output on it? I really appriciate any help I can
get!

/Johan

Is there anything currently avaiable that is similiar to ScannerBase XE, which was produced by CSP Tech?

The latest version of ScannerBase XE was put out in 1999, and fails to work on Windows XP due to NT incompatibility.Anyone; anything?

Im not going to do any RS bashing but you do have to admit it IS a business.

When RS sees that cellphones are a major income source and so readily available (everyone has one), you must admit that it would be STUPID for RS not to ask it's employees to make a single line statement about it.

You also have to admit that a 30-day return no questions asked policy is pretty darn good these days. Yeah there are alot of scanners sold (that my beef with them right now) and a few are going back in defective units. They are electronics and it happens. It may seem that more go back than other manufacturers and I don't have number on that so nuff said.

GRE manufactures the scanners that RS sells, just like RS does NOT make the Motolora cell phones they push. Everyone blames RS for it when it is GRE's unit. RS simply 'resales' the scanner.

I have a 93 and I am proud to admit it. It has the text tag problem but other than that it works fine. I do 'workaround' the problem but I still would like to have a fully functioning unit.Hopefully the rumor of RS making a repair/exchange for the 93's I will take it back. Until then it is mine (since it is past the 30 day return policy) and I want to keep it anyways.

I have a pro 2006 and would like to know if it possible to get some type of weather fax or rtty with this unit. I have been listening to local police and fire for years but now would like to broaden my horizon of the air waves.

My roof mounted Scantenna finally succombed to the weather and I am in the market for either a Monitenna or a Radio Shack 20-014, both of which are discontinued. I would prefer to buy a new one. If anyone has either antenna for sale or knows where I can obtain either one, send me an e-mail. I'd be glad to take one off your hands. I monitor all public safety bands so if anyone, has any other antennas in mind, let me know.

I am lucky/unlucky enough to be in Salt Lake City during the Olympics. Does anyone know what frequencies might be the most interesting. I'm particularly curious about the Secret Service, FBI, and the communications between military aircraft that will be patrolling but I'd also be interested in knowing any frequencies that you think might be worth listening to. Thanks.

And he can deal with it the same way I do; go somewhere else. Should I be polite to muggers because they're just doing their job? I've walked from more crap jobs than most people have had, and it's cost me in pay cuts a few times, but I gain a lot more self respect by not using the 'just doing my job' copout.

>How can we be better? Keeping in mind I can't change the prices, how
>can I be a better sales associate for you guys?

Leave, take everybody you can with you, and discourage anyone and everyone you meet from working there until RS changes.

You want to be a better sales associate for me? Help keep the few real parts stores in business and dealing with individuals, rather than bulk sales and 100+ unit minimum orders only.

I've gotten much feedback and I appretiate it, but I need a straight answer. Is there ANYONE on this newsgroup that monitors the NJSP in the Toms River area that can give me an ACCURATE listing of 800 mhz trunked frequencies in use by the troppers that operate in this area. I've seen many conflicting lists of frequencies and need to know from someone who actually monitors in this area.

2144. Scanner Stuff For Salt Lake City Utah for Olympics

Newsgroup: rec.radio.scanner
Date: 2002-02-07 06:55:02 UTC
From: Champ <Champ_Is_Not@rogers.com>
Message-ID: <axp88.3297$WHj1.1653@news1.bloor.is>
Source record: 52614
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Just wondering if there will be anyone broadcasting there scanners from home from any of the 4 zones allocated for the Olympics in and around Salt Lake City Quite a bit of spectrum is being used for the event. I'm sure many of us would like to follow along with this from a scanner point of view. And being able to do this online.

If you live in the region and would like to know how you can put your scanner online, Join the Scanner audio group listed below.

And never mind replying about all the digital comm's happening and the fact you won't be able to hear anything. I'm sure you'll hear lots.....

> >mentioned, period.
> >
> >
> >
> >Glenn
>
> How about Belden 9913F? How well does it compare?

Attenuation
MHZ 1 10 50 100 200 400 700 900

9913 0.15 0.4 0.9 1.4 1.8 2.6 3.6 4.2
RG-6 0.16 0.57 1.4 2.0 2.8 4.3 5.6 6.0

I think the F has a bit more attenuation then the above. I would still
opt for RG-6 because the losses are that high. I have been using LMR-
400 for ham radio purposes and RG-6 for all my scanners.

Here where I got the info:

http://www.davisrf.com/ham1/coax.htm

and

http://www.timesmicrowave.com/cgi-bin/byteserver/products/commercial/selectguide/LMRGuide.pdf

Hope it helps

Glenn

Include the words NOSPAM in your email address in your newsgroups account setup with whatever program you are using to read these newsgroups. Include somewhere in your message "To email directly remove NOSPAM from email address."

There is some kind of automated program that scours newgroups searching for email addresses and saves the email addresses and then spams them with their junk. This is my understanding in a simplist form as to how that happens.

I have also been told that if you use Microsoft Outlook/Outlook Express and use the address book, that if you create a entry in the address book with just the letter A and another as Z as a name, with no other information entered in the field, that it helps to defeat those viruses that scour your email address books and replicate themselves to everyone in your address book. Something along the lines of it defeats it when it does not have a address to send itself to. I do not claim this to be true, but if it works, thats true. This is only an allegation at this point and I am not stating it as fact.

Just gotta love technology!

Use MOT mode to program the C Troop trunked freqs. provided by several
members of this group. Talkgroup IDs which cover the TR area, not the
GSP, include 10240 and 10320, they are dispatched out of 5-Comm
Allenwood Station. Also be advised that A1-03 East (A Troop) 5-Comm
Dispatch (Tuckerton Station) Troop Cars (Talkgroup IDs 06144/06160) do
at times wander into the Dover Township area.

>seem to find freq's for them, only A, B, and C... any ideas?

Use the C (Central) frequencies, Repeaters are in Dover and Holmdel. You will
be
able to monitor GSP from Bloomfield to Bass River. I have a Pro2052 (base) and
Pro-93 (Portable) that I monitor NJSP with. Since NJSP use a type IIi system.
I
programmed the same 14 frequencies in two separate banks. One bank I have set
as a type I fleetmap and programmed all the type I talkgroup ID's in it. The
other bank is set as a type II and I programmed all the type II talkgroups in
it. Then I scan
the ID banks I have programmed in. Bank 1 scans the type I ID's and Bank 2
scans
the type II ID's. I have heard others use one bank set as a type II and
convert the type I ID's but I haven't tried this method. Good Luck

Make sure you get one with date code 11A01 or later.

Press "3" while the opening screen is displayed to check the firmware
version. Should be 1.01 or 1.03.

Version 1.00 has software bugs.

I bought it yesterday because of the price and it seems like a nice scanner.
I have version 1.00 firmware , and now I've been reading about bugs in it.
Should I take it back for a refund? What would you do?

Thanks for the input,
Jigs

On Tue, 05 Feb 2002 21:21:47 GMT, Brooke Rowe
<world-national-security@pacbell.net> wrote:

:DoD to Share Spectrum with First Responders
:
:(EXCERPT) The Department of Defense today submitted its report to
:Congress regarding the feasibility of sharing the 138-144 MHz band
:with public safety users. A DoD Joint Spectrum Center engineering
:study identified ways sharing would be possible without interfering
:with DoD operations.
:
:Deputy Assistant Secretary of Defense for Spectrum and C3 Policy
:Steven Price said, "We believe it is possible to share portions of the
:138-144 MHz band with public safety users on a limited, coordinated
:basis. DoD is willing to work with National Telecommunications and
:Information Administration, state and local governments and first
:responders on a case-by-case basis to explore sharing the band for the
:common good."
:
:While the 138-144 MHz band continues to be critical to DoD operations,
:the department has found it helpful in emergencies to share
:communication systems with other first responders. A small number of
:channels may be shared on a regional basis when it is to the mutual
:benefit of DoD and public safety officials.
:
:DoD operations that would be affected if this band were interrupted
:through heavy use of too many channels would include air-surface-air,
:air traffic control and ground support functions at military
:airfields, tactical communications for close air support, land mobile
:radios for sustaining installation infrastructure support and land
:mobile radios and specialized equipment for training and test range
:support. Other systems that would be affected include fire and
:security alarms, and hydrology and utility controls.
:
:The National Defense Authorization Act for fiscal 2000 reclaimed for
:federal, primarily DoD, use of three megahertz in the 138-144 MHz band
:previously identified, pursuant to requirements of the Balanced Budget
:Act of 1997, for reallocation for mixed federal government and
:non-federal government uses. As Congress understood, the recovery of 3
:MHz was and is crucial to fulfilling DoD's spectrum requirements.
:However, in the conference report, DoD was asked to provide a
:technical report assessing the feasibility of sharing the 138-144 MHz
:band with public safety users. In the fiscal 2001 authorization,

:Congress directed DoD, in cooperation with the Justice Department and
:the NTIA, to provide for an engineering study with regard to spectrum
:sharing in the 138-144 MHz band. The assistant secretary of Defense
:for Command Control Communication and Intelligence (C3I) has submitted
:this report to the Senate Armed Services Committee and the House Armed
:Services Committee.
:
:Under direction of Assistant Secretary of Defense for Command,
:Control, Communications and Intelligence (C3I) John Stenbit, the DoD
:Joint Spectrum Center conducted an engineering study regarding sharing
:in the 138-144 MHz band. The resultant classified study showed that
:the areas of operation associated with the DoD frequency usage in the
:138-144 MHz band encompasses nearly the entire continental United
:States. Large distance separations would be required to prevent
:co-channel and adjacent-channel interference between DoD equipment and
:potential state and local public safety systems, particularly in the
:case of DoD air-ground-air radios.

>>Glenn
>
>How about Belden 9913F? How well does it compare?
First, ohmeter is worthless. the impedance is the characteristic
impedance, which is NOT the DC resistance.

9913 is excellent cable.

The reality is for a receiver, the difference between 75 ohm and 50
ohm is negliglbe. while the input may be characterized as 50 ohm or 75
ohm, and better description is simply Low-Z because as move thorugh
the spectrum the input impediance will change,
and the losses in a receiver from using a 50 ohm instead of 75 ohm
feed are going to measured in fractions of 1db... They don't add up to
anything...

In my experience, any version 1.0 software will tend to have problems. Also
true, to a lesser extent, with 2.0, 3.0, etc. They are all significant
changes from the previous version.

I programmed my 780 XLT with the four control channels for Ft. Lauderdale and have it in control channel only mode. My talkgroups were already programmed and everything appears to be working. Does this sound correct? It seems that control channel only is more efficient since you are only scanning the control channels. Am i correct? Any insight to control channel only would be helpful.

Thanks,
jfaul@bellsouth.net

Granted the PRO-2052 does very well in the "normal" MilAir band of 225MHz - 400MHz. I have one and do like it. However there is one short-coming of this radio for the MilAir listener. That is the 138MHz - 144MHz. This band is used a lot for Military Aircraft Air-Air and most of these comms are AM. The PRO-2052 does not allow you to switch from FM to AM in this frequency range.

In my area there are a lot of 138-144 comms to listen to.

Well, from everything I have read the ICOM R3 pretty much sucks.

I was thinking of getting an 8200 myself but have at this point
decided on an Alinco DJ-X2000.

>If the store sold him the 1.0, why would they have the newer fixed
>one?

Because selling that radio might not have been a one-time event for
that store, and they may have more in stock.

Maybe even a Version 1.01 or 1.03 that was sitting there when they
finally pawned off that 1.00 on him.

Or they might order a newer replacement for him.

Or he could find another RS that has a newer one.

The possibilities are almost endless.

Yeah, once you have those data channels in, it automatically decodes the voice channels. Also it needs to be in open mode to pick up all the TG's. If you had it in closed mode, you wouldn't get anything 'till you put them in yourself. So keep it in open mode and figure out what your listening to. That's the best part of scanning, figuring out all that stuff. Then when you have a list of what you want to listen to, put them in, put it in closed mode and that's all you'll hear.

Having had both, the R2 is better in almost every way, except for the keypad, and the PC does that fine. My R1 went bye bye after a couple of days the intermod made it useless most of the time in most bands. Nobody else I know has kept theirs very long either...

Why do you scan in the first place? Intrest is the thing. The number one
issue though for people like you is cellular co. telling people their calls
are secure when you can import or get a scanner of eBay that will get all
bands, so it doesn't matter if you think it's right or not. It is deceptive
of the cell co. to say your call is secure unless it's deigital

2190. Panasonic 2.4ghz gigarange extreme earpiece heat build up???

Newsgroup: rec.radio.scanner
Date: 2002-02-08 04:31:37 UTC
From: marcus <marcusNOSPAM@is2.dal.ca>
Message-ID: <Jwl88.96$go6.39728@sapphire.mtt.net>
Source record: 52558

I bought a panasonic 2.4ghz SST gigarange extreme model KX-TG2550CS a couple of months ago. I wish I didn't!!!
shorter range than my older sanyo 900MHZ DSS (I loved that phone), but what annoys me more, is the heat build up in the earpiece after talking on it for 20-30 minutes. Coincidentally, the same thing happens to my cell phone (Nokia 5160)

Is that heat build up normal for these phone or is it a defect? anyone experience this with the panasonic cordless phones?

do the newer panasonic gigarange extreme phones use a combination of 2.4GHZ and analog 900MHZ like the older models, which would explain the shorter range?
if that is the case, this would be a shit phone with no true DSS security for the price I payed. My older sanyo 900MHZ DSS was selling for less than half the price and I wish I bought another one (Can't find them anywhere anymore)
Thanks for your imput

please remove NOSPAM from email address
Thanks

Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap

I am selling my YAESU FT-50 dual band (440 - 2M) hand held radio. The radio is in Excellent condition. Non-smoker. This radio has been modified for out of band TX. Package also includes the rubber "gasket case", NC-50 rapid drop in charger, FBA-15 AA battery case, FNB-41 600 mAh battery, MAHA FNB-V47 1800 mAh battery, and MAHA FNB-40 650 mAh thin battery.

I am asking $275.00 for the package, shipped via USPS Priority Mail, insured.

I can accept PAYPAL, a US Postal money order, or check. Personal check will delay shipping until it clears.

You can check my eBay feedback under OFFDAN.

E-mail if interested.

Your PRO-90 is set to scan Type 11 ("MOT"/Motorola) trunked systems and
type 11 user IDs by default.

Both are the same, and even though Troop E is part of the statewide
trunked system the above two freqs, excluding talkaround channels, will
be the only ones they come up on. Bass River Troop Car transmissions are
simulcast on 855.212 (again rounded off your scanner will add a 5)
throughout A Troop.

Most scanners will only support down to 5Khz resolution, where as some high grade/commercial *may* offer finer resolution. Sounds like unless there is a mod to allow 1khz resolution, then you may have to deal with being "a little off."

Kind of ashame that RadioShack did that on the 2052. I have a couple PRO2035's, 2006, and BC780XLT so its no big deal here either. But the 2052 is nice because I can download a set of MilAir freqs via the computer in a few seconds. Makes programing channels pretty fast! I'm thinking of selling the two 2035's and replacing both with two 780XLT's.

But the 2006 I'm hanging on to as my retirement fund since my Enron stock then to crap :0)

The frequencies are accurate, however, the Talkgroup IDs leave much to
be desired. For example no type 11 IDs are listed for C3-03 SOUTH, C3-
04 WEST, C3-05 EAST ...

Perhaps these are some of the IDs Walt can post...

When I go to Radioshack it's because i already know what I want. I have the catalog and call ahead to make sure they have it in stock and to put one behind the register with my name on it, whch they always do.

I stopped buying scanners after the Pro26 and Pro-2045 since the new ones are really skimpy on the frequency ranges for my needs.

The dumbest salesperson encounter about 4 years back was when i went to inquire about the satellite TV system. I asked for the compass heading, elevation and azimuth angle so i could go home and see what if anything was in the way. Being surrounded by 150=foot tall pine trees, the dish would have recieved no signal. End of story... nope. On a re-visit the same salesperson asked me if I was going to buy the system. I told him there were too many tall pine trees in the way. His reply, and I quote "You should cut down some trees then." BAD answer.

The only complaint about my RS store is it's small and they put up these display stands of TV dish systems, phones and pyramids of remote-control toys all over the floor so you practically have to dance around them on the way in, around and out of the store.

There's a large RS store a little farther away that is so roomy it felt like I was in a decent hotel lobby. No "watch your step fear factor."

OK, troll, I'll bite. One listens because it's interesting to hear
the culture of the traffic on the air.

For example, listening along I-95 at night many years ago (when it was
legal) I heard drug dealers discussing their market in the beginning
of the new school year. I heard a probably married business executive
discussing his wife with another woman (his mistress?). At other
times I have heard a culture of expressions, different place names,
languages, and so forth.

I couldn't care less about the identities of those people, but as a
sociological research tool, as a potential marketing research tool,
and as a casual cultural pulse meter of sorts, it has its uses.

You can sneer at how those who engage in this sort of thing have no
life, but can you honestly say that someone else who is a dedicated
fan of one or more sports is any better?

In a Control Channel Only receiver it is redundant to enter the
non-control channel frequencies.

In operation, the receiver sits on the Control Channel listening for
data. When it receives information about a transmission, it receives
the information as to what frequency that transmission will use. And
for those bands in which the receiver is "Control Channel Only", that
information is what the receiver uses to tune to the specified
frequency. Having the non-control frequencies programmed in the bank
does not help the receiver find a frequency, it can only slow down the
scanning as the receiver has to stop and listen to each programmed
frequency.

Hi!

Does anyone know of a software that uses the "cloning" feature of this scanner. OR does someone know how the cloning works, so that one could make a program to utilize it in a pc.

It would be great, just to uses the cloning-feature to "backup" the memorized channels(Donï¿½t wanna loose 1000 frequenzes)

TheTalkgroup ID's seem to match the information on Joe Cardini's very
comprehensive website as well as trunktracker.com. If you have some info that
differs why don't you post it so that we can check it out. Could be the only
thing that leaves much to be desired is your knowledge of the statewide
trunking system.

2217. NJSP - TYPE II Equivalents of TYPE I IDs

Newsgroup: rec.radio.scanner
Date: 2002-02-08 20:20:20 UTC
From: Walt Bertram <wbertram@optonline.net>
Message-ID: <3C643304.FA37DF3B@optonline.net>
Source record: 52586

The NJSP operate a Motorola Hybrid Type IIi system. Such a system contains both Type I and Type II talkgroups.

With a scanner such as the PRO-92 or PR0-93, their base style equivalents, and other similar scanners, it is necessary to identify the system as either a Type I or a Type II. Typically, if one desired to listen to both some Type I and some Type II talkgroups, they would have to enter the same set of frequencies in two banks, one set as Type I and the other set as Type II.

It has been noted by others, and discussed on the Strong Signals Trunking Message group, that all the Type I talk group IDs are transmitted as Type II IDs, and that these talk groups may be heard when the system is set up as a Type II system. For example, the NJSP 2COMM talkgroup 000-02 will be heard on a Type II setup as either talkgroup 4096 or 4144.

Each Type I talkgroup has two Type II talkgroup IDs, one, I believe, related to base units, the other to mobile units. The first Type II talkgroup ID is common to all three NJSP systems, South, North,and Central. The second ID is offset from the first ID by 16 in the South system, 48 in the North system, and 80 in the Central system. To hear all transmissions for a given Type I talkgroup, both Type II talkgroup IDs must be specified.

I have used this method of monitoring the North system for several months and find that it works quite well, much better than dedicating two banks to the single set on North system frequencies. I would like to thank the contributors to the original discussion on the Strong Signal group which brought this method to my attention. Thank you Dave Howden, Scott Wilson, Garys, and Dave KC2GVX.

In the following post is a table of all the talkgroup IDs.

Walt

I think the discone still mates with a PL-259 connector. How did you
attach the coax to that connector? Soldering the braid of RG-6 to the
connector is not easy. My guess is that one of the connectors is either open or
shorted.

You would be better off installing an "F" connector and then using an
adapter to mate the "F" connector to the SO-239 on the antenna.

I agree with Walt per my original post. Anyone else agree? It sure
seems that control channel mode is faster and picks up alot more and
that would make sense since it isnt scanning all 25 channels..just the
control channels.

So in theory, could you place many control channels in one bank and set the squelch up so high as for it not to move.

Then you could have what, say 20 systems (the number of channels on one bank)?

i use a 2000,and have used many scanners the worst wideband one being the Icom R10,but the Alinco is fantastic

excellant hf reception
alpha tagging and searching
ctcss recieve something that should be on all scanners
even the de scrambler i can use on 2 users in London[so not really a selling point,just personal experiance]

the counter or rather Flash tune as i have it set up for,works as a counter should ie i see a guy on a handie or mobile radio and it displays the freq,i do not use my Opto counters anymore,although in comparisons with my mates Opto Cub,we find both miss the odd freq from time to time,thats rf for you.

ie we see a guy with a pmr licensed radio rate app 1-5 watts and nothing comes up,then eqaul distance a guy is using pmr446 half watt and it goes for it,but in most cases we get our target,and the sort of scanning we do we have a lot of targets.

Audio could do better,very low,slight hiss in background and a bit of a squelch tail,def need headphones in noisy environments.
A lot of UK dealers though do not like it,but i have persuaded app 6 friends[email friends],some ameteurs and engineers to part with £500 ukp and they appear to be happy.

Not as sensitive as some scanners ie MVT7100,but in a lot of areas at 150-170 would overload from pager signals,the Alino is very clean but still pulls in the signals as a handheld should[ie it should not pull in as good as a base].

A handheld should be able to work on small arials while out and about and then at home should be able to connect to something better,and the Alinco does that.

As for referance to 900 mhz,we do not use any voice analogue freqs up there so if it is deaf then not a problem.

regards

Hi all,

I used to own a scanner years ago and would like to get back into it again.

I've been reading a few reviews and it seems the Yaesu VR-500 would be the best choice. I like the fact that the frequency coverage is good and that it's portable for taking with me when I'm out walking.

Are there any others I should look at before making my decision? I'd like the same frequency coverage and around the same price range. Also could someone recommend places to buy online? What's the cheapest places with good service? Is it possible to order from abroad (im in the UK) and have one shipped over? Are there any features that vary from country to country? What is the benefit of linking to the PC? Is it possible to upgrade the software on any?

Sorry about there being so many questions but I like to have as much information as possible before buying. :-)

Also, I'm enjoying the group and hope to hang out and eventually contribute.

Thanks to all and happy listening.

While I appreciate Mr. Cardini's efforts and have no problem believing
they appear comprehensive to you, I was speaking about unpublished NJSP
motorola type ll Talkgroup IDs. Two list of information that "match" by
no means make them up-to-date, valid, or accurate in fact it smacks of
recycled material.

As far as receiver, buy what you are comfortable with as far as use (which may be hard w/o playing with it).
Read and download manuals if you can.

As far as frequencies, that depends on your area and what you will primarily listen to the most.

Online: www.aesham.com, www.universal-radio.com, www.hamradio.com, www.burgardt-amateur.com, and many others.

Abroad: US.Customs. Take your chances but I never have ordered from another country.

Features from other countries: Band plans but they are dependant on the actual unit and I would say not that much anymore.

PC Linking: Keep a set for local and reprogram for say travelling and even different cities. Makes programming VERY easy anyway.

LONG LIVE MAME!
Still havent completed my cabinet... but still love the games.

The X2000 will act as a frequency counter by displaying the frequency, or reaction tune the radio
to the signal so you can listen in. Of course these would have to be very near field signals.

Very near field is still an understatement. I've got my 'dumb as dogshit' DJ-X2000 in 'Flashtune' mode sitting about 2' from a dummy load into which I'm shoving 50 watts on 146.7000 MHz and still the damn thing can't find the signal. I can't believe that you find it better at reaction tuning than an Opto counter. Which model Opto are you using. I have 2, an original Scout and a 3000A Plus, and either of them will pick up signals on almost any band that the Alinco never hears.
All I can say is....perhaps I got a lemon. I'll take it around to a friend who was clever enough not to sell his test equipment (yes, me) and check out it's specs. If it's not within + or - 5%, back the bugger goes. Why oh why did I sell my R-10. Even the audio on this receiver sucks!

umm, excuse my ignorance, but are you saying it is possible to pick up a guys freq. by just 'pointing' your scanner at his device?!? does the yaesu vr-500 have this function?!

Thanks in advance...

"proma1" wrote in message
news:zaZ88.7127$YA2.1243763@news11-gui.server.ntli.net...
i use a 2000,and have used many scanners the worst wideband one being the Icom R10,but the Alinco is fantastic
excellant hf reception
alpha tagging and searching
ctcss recieve something that should be on all scanners
even the de scrambler i can use on 2 users in London[so not really a selling point, just personal experiance]
the counter or rather Flash tune as i have it set up for,works as a counter should ie i see a guy on a handie or mobile radio and it displays the freq,i do not use my Opto counters anymore,although in comparisons with my mates Opto Cub,we find both miss the odd freq from time to time,thats rf for you. ie we see a guy with a pmr licensed radio rate app 1-5 watts and nothing comes up,then eqaul distance a guy is using pmr446 half watt and it

goes for it,but in most cases we get our target,and the sort of scanning we do we have a lot of targets.
Audio could do better,very low,slight hiss in background and a bit of a squelch tail,def need headphones in noisy environments.
A lot of UK dealers though do not like it,but i have persuaded app 6 friends[email friends],some ameteurs and engineers to part with £500 ukp and they appear to be happy.
Not as sensitive as some scanners ie MVT7100,but in a lot of areas at 150-170 would overload from pager signals,the Alino is very clean but still pulls in the signals as a handheld should[ie it should not pull in as good as a base].
A handheld should be able to work on small arials while out and about and then at home should be able to connect to something better,and the Alinco does that.
As for referance to 900 mhz,we do not use any voice analogue freqs up there so if it is deaf then not a problem.

I had the Alinco DJX-10E for 2 years, I found this unit to be slow and deaf on some bands. I have since sold it and bought the Alinco DJX-2000E and I am glad I did.

"Viper56-FW" wrote in message
news:vx278.60916$B94.11553790@news02.optonline.net...
I wonder if the current DJ-X10 is still deaf? I know it's still slow, but that just means I won't be finding any "new" frequencies with it. I'll also be a bit behind when I need to search several banks for activity during a quit time...I guess that's why they didn't care to have convenient bank linking, because why would you really want to link banks on a scanner that is so slow? I would expect to be scanning only a few frequencies in one bank at a time with 5 channels/sec!
What do you think? Is it the same DJ-X10 from 2 years ago today??

"roughplanet" wrote in message
news:3c5d25e6$0$11840$afc38c87@news.optusnet.com.au...
Hello. I had an Alinco DJX-10E several years ago together with an Icom -10, nd eventually sold both due to (a) their slow scanning rates, and, in the case of the Alinco, the 'selective deafness' the receiver exhibited on several bands. I recently bought an Alinco DJX-2000E, and frankly, whilst it is faster than the DJX-10E, it's not by a factor of 2 or anything like it.
Also, the further up the band you go, the poorer the sensitivity becomes. At anything over 900 MHz it's 2£V @12 dB SINAD (NFM) and 4£V @ 12

dB SINAD (WFM) which are nothing to boast about.
Mine's for sale if anyone's silly enough to part with AUS$1100. It comes with three (yes three) Alinco EBP-37N 700 mAH batteries ($95 each), the computer cable & software for Cloning or
Computer Control, ($79) EDC-88 Fast Charger, (included) ESC-29 case ($30) and is boxed with manual & in as-new condition. The Bug Detector is a farce; whoever heard of a bug detector in which you had to know the frequency of the bug first! Hah! And likewise, the Frequency Counter only works with signals over 100 dB and even then, the menu settings you need to go through to get it to work are so onerous no-one could be bothered. This is a yuppie scanner & I'm sorry I wasted over $1400 for the thing. Because I'm honest I'll probably die with it. Anyone contemplating buying this unit, save your money & get an Icom R-10 if you don't want trunk tracking & don't care too much about the scanning rates, pay a bit more & get an AR-8200 MK II, or a lot less & get a Uniden BC245XLT. Any of them would be a better buy than the Alinco.

Source record: 52516

I have a BayGen Freeplay 360 AM/FM Radio for sale. This is a self power radio and will run on the following power Sources:

Internal - B-Motor textured carbon spring driving a DC generator through a transmission.

Solar - High performance thin film solar panel

External - Optional DC adapter (center pin positive) 4.5 V 150mA (minimum)

The Frequency Range is:

FM - 88 to 108 MHz

AM - 520 to 1700 KHz

For more information see the following web pages:

http://windupradio.com/freeplay3.htm

http://www.ogormans.co.uk/freeplay360.htm

http://www.productsforanywhere.com/gear/details/fp_360.html

The Freeplay 360 is in excellent condition and works fine. The selling price of $50.00 includes shipping costs within the continental United States.

Please email me direct if you are interested. Do not reply to this message. My email address is: rbird2@peoplepc.com

Thank you,

Rodger

Can someone direct me to a web site regarding the different types of "tones" and an explaination about them. The following tones I would like information on...ie what their used for etc...

CCIR-1
CCIR-2
CVEI
EIA
EEA
NATEL
CTCSS

2254. HELP: CB Frequencies

Newsgroup: rec.radio.scanner
Date: 2002-02-09 21:25:41 UTC
From: "Michael A. Nunes" <p@pcmike.net>
Message-ID: <6u4b6uk4rfpgr3sbo83lct6g4rndefh4i4@4ax.com>

How come my AOR AR8200II can't recieve CB frequencies? Even if I'm driving clear down I-95 and tune my 8200II to 27.185, all I get is basically static. Truckers are speaking, as I can hear them on my CB, but I can't hear them on my 8200. The same is true for any CB frequency. I even tried extending the antenna to the max and everywhere in between. HELP PLEASE!

- pcmike

Body handling: HTML body converted to readable text

most of my views are on the previous mail,the only downside for me is the audio problems,but they are very minor really,a hiss quite prominent on fm signals and the squelch tail[ie that crack at the end of a transmission]

but it was the radio i was looking for.and i am very pleased,but there is no radio around that everyone likes,reviews are not much help as you are going on what someone else says,sometimes you just have to go get it,and if you dont like send it back.

going back to counter,i tried a pmr446 500 mw radio with the Alinco using a Diamond subby antenna and mangaed flash tune from 6 metres/3 watts uhf set 10 metres.

when i am at a site trying for a freq and they are using a licensed pmr user,i do not know if they are switched to 1 watt or 5 watts but in most cases a distance of about 11 metres is normal on that aerial,if i have problems and i am not getting the freq,then i put a longer aerial on and put the set inside my coat pocket,and try again.

regards

Hi pcmike;

Try your vehicle's CB antenna. In side your vehicle you can
hear yourself Xmit but not much else on the 8200's whip.

The only problem is the 8200 only accepts BNC connections, and then that medium-wave bar, but my CB antenna is a PL-259 connector, or whatever.

So, how would I hook it up to my 8200?

Make up a little adapter cable. BNC male on one end, SO-239 on the
other. I've seen adapters like this but you really dont want something
that bulky poking out of the back of the radio.

Go to Radio Shack, buy an adapter, or piece together the requisite
partially-satisfactory adapters.

Hey Chris, I don't know much about the other tones, but I can help you with CTCSS tones. They are used to allow a receiver to receive a signal that includes the tone in it. This way, other people can be using the same frequency, but the receiver wont replay their audio unless they have the tone included with the transmitted signal. More can be read at: http://www.pacres.com/ctcss.htm

2264. tk8500 v0.5, open source software for IC-R8500

Newsgroup: rec.radio.scanner
Date: 2002-02-10 03:36:51 UTC
From: Bob_Parnass_AJ9S <parnass@megsinet.net>
Message-ID: <3c65ea72$0$39544$272ea4a1@news.execpc.com>
Source record: 52531
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave

Version 0.5 of tk8500 is now available at:

http://members.core.com/~parnass

tk8500 is open source software designed to control
and program the ICOM IC-R8500 receiver. Programmed using Tcl/Tk,
it runs on Linux, Windows 98, Windows XP, and perhaps MacOS X.

(You must install the free Tcl/Tk interpreter prior to running
tk8500. See web page or instructions.)

New features in experimental version 0.5 include:

Users can now choose to boost or cut the volume for
a set of frequencies. Added a second Volume control.
A new Volume field in the Memory Channel .csv file
determines which of the two volume controls to use.

Added the ability to change the text font and
change the color of the graphic images.

Faster receiver polling.

While scanning memory, the active memory bank label widget
will be green while the inactive labels will be white.

See Release Notes web page for more info.

I don't warrant the software, but it won't cost you anything.

2265. FS:YAESU FT-50 package, Reduced!

Newsgroup: rec.radio.scanner
Date: 2002-02-10 03:52:39 UTC
From: Dan Conti <dconti@nj.rr.com>
Message-ID: <b8m98.80348$d16.18031658@typhoon.nyc.rr.com>
Source record: 52532
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap

I will try this one more time, reduce the price for the package, and then it's off to eBay if NO takers...

I am selling my YAESU FT-50 dual band (440 - 2M) hand held radio. The radio is in Excellent condition. Non-smoker. This radio has been modified for out of band TX. Package also includes the rubber "gasket case", NC-50 rapid drop in charger, FBA-15 AA battery case, FNB-41 600 mAh battery, MAHA FNB-V47 1800 mAh battery, and MAHA FNB-40 650 mAh thin battery. All batteries and the AA case have the optional SPRING belt clip. Also includes the ADMS-1E programming software and cable for the FT-50.

I am asking $260.00 for the package, shipped via USPS Priority Mail, insured.

I can accept PAYPAL, a US Postal money order, or check. Personal check will delay shipping until it clears.

You can check my eBay feedback under OFFDAN.

E-mail if interested.

Hi there,
I have a pair of Motorola UHF Radius SP-21'S in beatiful shape
Made 99/05/22
These are proffesional business radios,

* 2 Watts,with built-in Private Line and built-in VOX capability
* 12.5/25 kHz programmable channel spacing
* Motorola unique voice compression technology for superior audio

* PL Standard Codes (Private Line)
* Voice prompt programming
* Built-in VOX - Voice Operated Transmission
* Lightweight compact design
* Nickel Cadmium Battery
* UHF Whip Antenna
* 2.5" Belt Clip
* NOTE NO CHARGERS (SELL FOR $5.00 each)

These radios new sell for above $200
I am asking $160 shipped, gaurunteed to be in perfect working
order! E-mail me directly for any questions or for a picture.
Thanks-Russ

Sadly, Toronto police are using RD-LAP, which MTDMonitor can't handle,
iirc.

Aside from the flashtune issues you are having. What is you're feeling of
the receive characteristics of the radio?
I have one on backorder right now and still not sure if I made the correct
decision.

Paul is absolutely right when he says that no one radio will suit everyone.
As I spend 95% of my listening time in my shack, I probably have an unreal
expectation of handheld scanners, as , consciously or not, I'm comparing
them with desktop models costing thousands of dollars more. To that end I am
doomed to disappointment, as NO handheld scanner will ever duplicate the
performance of a 1st class scanning receiver. So, as Paul says, bite the
bullet & go with your original intentions. If you aren't pleased with the
radio you should be able to return it, or at least swap it for something
else.

Message-ID: <Oqu98.44$va3.97538@newsfeed.slurp.net>
Source record: 52543

I had the same problem with my AW "super discone".
Using an ohm meter I found that the connector on the bottom
of the antenna was shorted. (tied together)
There was a cracked insulator inside it.
The person @ AW sent a replacement right away.
(good people)

Did you put the connectors on your coax?
RG-6 has foil shielding which can be tricky.
shorted connecotrs will act the same. (no signal)

As others have said, without test equipment, (ohm meter) substitution
is probably your best bet.

Tom

Sounds like you have a very good "dummy load". Seems as though it is
doing exactly what it is supposed to do, i.e., dissipate power without
radiating any of it.

What happens when you connect the transmitter to an antenna, then walk
down the street and see what the range of the X-2000 Flashtune is?

Walt

The price right now is probably better than you expected. RS is closing out the 20-044 Scantenna right now for $9.95 ea complete with RG6.
Don't expect to see them in the show room, they keep them in the back room so you will have to ask.

KD4LLA

U.S. District Judge Colleen Kollar-Kotelly should demand that Microsoft
hand outsiders the software keys they need to write programs that work
on Windows. Software disclosure would not undercut Microsoft's ability
to profit from selling Windows. It would only increase Windows' legitimacy
by helping its operating system run the sort of programs that ordinary
PC users want, not what arrogant Microsoft bosses think they should use.

2283. Portable Cell Phone Jammer Needed - no lectures please

Newsgroup: rec.radio.scanner

Anyone know of any plans or kits that will jam cell phones
in a short distance? There are valid reasons to do this,
so no lectures about legality are needed - please.

I'm told that one method is to use another modified cell
phone to disrupt the control channel within a small radius.
Is this true? If so, what model of cell phone, and where
are the plans?

Any info you can contribute about modifying existing cell
phones to convert them to jammers will be appreciated.

1) There's no *legally* valid reason to violate the law.

2) Helping you, in ANY way, to violate federal law, is a felony in itself.

3) Asking help by admonishing those you want help from isn't likely to get you any help.

** To jam a cell phones you need a strong signal over the whole band used
by such phones. That is why they are illegal and your request is outrageous.
Fuck you.

Phil

A legal way to jam the cell phone may perhaps start with the following
instruction.

1. Bend over.

Amount of power required dependent upon amount of sand in Vaseline.

There are commercial products available for just that purpose.
In some administrations they are used in places like theatres and
restaurants to protect customers from the ignorant and self important.

Although I have read articles in newspapers and newsmagazines discussing
them the names of the manufacturers and/or distributors elude me. I'm
pretty sure the main manufacturer is a Japanese organization but that's
the best I can do without researching it.

You might want to check the legalities of such use in your
administration - unfortunately many posters assume the laws where they
live apply everywhere, which is of course nonsense.

If you know someone going to Japan, they might be able to find you one
there. They use them to discourage cellfone use in theaters and other
public places. Don't know of any kits or mods to existing phones,
however.

Information is not illegal...

For decoding of data you really need a discriminator output.
I think you're just lucky being able to decode low-speed data,
but I'm sure also 1200 and 2400 will work much better when
using a discriminator output.

Take a look on the web, for the right modification for
your scanner. I'm sure Google can help you!

Peter Hunt.

That's a real worry if it's true.

As someone who spent the best part of 14 years on-call 24 hours a day for a government emergency service, I'm appalled. This was for maritime search and rescue for an area covering nearly a quarter of the southern hemisphere, and I depended on a cellular phone to be contactable (I couldn't leave the coverage area).

My ignorance and self-importance were completely irrelevant. I can imagine the legal implications if this behaviour ever came out in a coronial enquiry. We're talking international obligations here.

I'm sure survivors clinging to life-preservers would take great comfort in knowledge of the diners' exquisite undisturbed ambience, as would their families.

Every administration must have emergency staff who need to be contactable and ready for action. These people already lead a limited and stressful existence, without being marginalised in this way as well.

John

AH, okay, i know about that... im too chicken shit to mess around inside my scanner. I have no talent at all messing aroundw ith stuff like that.

maybe i can find a junk one around. it'd be nice to decode the flex here.

Right now, im just looking for frequencies where I am. ive only found like 3 things that have a lot of traffic. one is primarily pocsag, and the other two are (of course) flex at 6400

There is a company in Israel that makes this product for between $500
to $600. They take credit cards and will ship. The only problem is
that I lost my bookmarks in the last hard drive crash and I don't
remember the name of the compnay.

Try an air horn. If the caller can't hear or be heard, he'll shut off the phone. No electronics necessary. Simple. Totally legal. Freedom of speech includes volume. :)

There really are devices that do this electronically, used in some Japanese movie theaters. I presume that patrons are warned going in that their cel phones won't work if they go inside, but the rationale is to let everybody enjoy the movie without a cel phone ringing. I don't know who makes these or even if they're offered for sale privately; they'd probably be illegal in the US.

A spark-gap transmitter ought to work, but it'll also screw up RF all over the bands -- AM radio, shortwave, TV, etc. That's why these are now illegal, too.

Some people write great Windows programs, and some don't.

Some of the great programs come from MS.

Some of the really lousy ones also come from MS.

I guess it's easier to blame MS for not releasing the "software keys"
than it is to learn how to write great programs.

Plese keep your biased opinions to yourself.

Been there , done that Walt. Most dummy loads, even good ones (which mine is) leak a little, certainly enough for either of my Optoelectonic frequency counters to give a reading with only the most rudimentary of antennas connected. Even when I'm only a kilometre or so from the local Police repeater (VKC), the Alinco shows nothing. It's probably the most disappointing feature of the receiver, apart from the so-called 'bug detector' which requires you to know the frequency that the bug is on. Somewhat ridiculous, you'll have to agree.
No, I stand by my original comments regarding the Alinco DJ-X2000. Although it does perform reasonably well in ideal circumstances, it does not represent value for money, given it's high price here in Oz.

Ruff

"Walt Bertram" wrote in message
news:3C667FA9.1741F351@optonline.net...
Sounds like you have a very good "dummy load". Seems as though it is doing exactly what it is supposed to do, i.e., dissipate power without radiating any of it.
What happens when you connect the transmitter to an antenna, then walk down the street and see what the range of the X-2000 Flashtune is?

Walt

roughplanet wrote:

Very near field is still an understatement. I've got my 'dumb as dogshit' DJ-X2000 in 'Flashtune' mode sitting about 2' from a dummy load into which I'm shoving 50 watts on 146.7000 MHz and still the damn thing can't find the signal.

Subject: Re: Alinco DJ-X2000
most of my views are on the previous mail,the only downside for me is the audio problems,but they are very minor really,a hiss quite prominent on fm signals and the squelch tail [ie that crack at the end of a transmission] but it was the radio i was looking for.and i am very pleased,but there is no radio around that everyone likes,reviews are not much help as you are going on what someone else says,sometimes you just have to go get it,and if you

dont like send it back.

"isobad" wrote in message
news:S7f98.33985$th4.10561208@news02.optonline.net...
Aside from the flashtune issues you are having. What is you're feeling of the receive characteristics of the radio?
I have one on backorder right now and still not sure if I made the correct decision.

Paul is absolutely right when he says that no one radio will suit everyone. As I spend 95% of my listening time in my shack, I probably have an unreal expectation of handheld scanners, as , consciously or not, I'm comparing them with desktop models costing thousands of dollars more. To that end I am doomed to disappointment, as NO handheld scanner will ever duplicate the performance of a 1st class scanning receiver. So, as Paul says, bite the bullet & go with your original intentions. If you aren't pleased with the radio you should be able to return it, or at least swap it for something else.

I have a Sony SW7600G For Sale.

Specifications:
-Coverage: 150kHz to 30MHz and FM (stereo with headphones)
-Synchronous detection
-SSB reception
-20 presets (10 AM / 10 FM) + 2 timer memories
-Dimensions/weight: 191 x 118 x 32 mm, 615 g (incl. batteries)

For additional information go to the following web page:

http://www.rnw.nl/realradio/icfsw76g.html

The Sony SW7600G is in excellent condition and works fine. I have the original box and manuals. The selling price of $110.00 includes shipping costs within the continental United States.

Please email me direct if you are interested. Do not reply to this message. My email address is: rbird2@peoplepc.com

Thank you,

Rodger

The thing to do would be to build a spark gap transmitter with a
resistor and a capacitor shunted across the gap which would just barely
keep the spark from happening over the band of interest. Figure out the
inductance presented on the output of a stun gun's transformer, hook the
RC across it and there ya go!

The cell phone is an 'interesting' choice of technology for
a safety and time critical application. The things are not
exactly specified for the level of reliability that your
application would imply. I would have thought that a paging
system of the type using phase mod. of an AM radio station
would have been more appropriate, as this penetrates buildings
far better then 1.8 - 1.9Ghz cell phone services do. Pagers
also work with a much narrower bandwidth and thus need less
signal to operate. The cell phone seems like totally the wrong
tool for this job, and if reliability is that critical then you
want to get something which will be reliable! One of the companies
over here (can not remember which one, anybody?) lost all service
for some hours the other day when their internal routing failed.
Tetra or LF radio paging would IMHO seem to be the better approach
to your emergency contact requirement.

BTW: A phone can indeed be modified as a jammer, a little feedback
here, some cpu noise there, and some current limiting to stop the
PA module doing itself an injury!

Regards, Dan.

It's true John, easily available in Hong Kong or Taiwan or Japan for the
purposes outlined, short range however...less than 100 feet radius is
typical, not cheap either, figure 200-400US dollars for one covering the
relevant bands.

"No lectures please." Spare me and other NG reader's the BS.
Apparently you don't have kids, and are not a member of a police/fire/ARC/rescue squad.
And you don't give a damn about emergencies.
There is absolutely no way that you can justify jamming cell phone communications.
I would like to hear your valid reasons to do this. Remember that a person
watching a movie in a theatre room next to you might have to administer CPR to you, or a member of your family.

I have had both scanners, and I still own the RE2000 Alpha. I found the SC200 to the typical, cheaply made Uniden product, with the proprietary battery pack, and very deaf, IMHO.

I love the RE2000, use it the most of all my hand helds, and I have them all. Very well made, shielded, and sensitive.

Here are a few URLs to help you get going,
I'll post them here so all may benefit.

One of the original jammers is still available at:
http://www.cguard.com/English/latests/index.html

Another good looking unit is described on:
http://www3.sympatico.ca/ChanLiYen/Cordless/dlw-2000.htm

Two excellent models at the bottom of:
http://www.cornerspyshop.com/catalogue.htm

Also, don't miss:
http://sarb.co.za/

I especially like the pocket models that would be ideal
to guard against hearing the a self righteous windbag
on their cell phones as they loudly spew false information
about communication laws.

These uninformed windbags often have no regard for the
truth or reality, and pontificate as if they are experts
in a field of communication law.

They often do this in a loud and obnoxious manner with
no regard for the peace of mind of others around them.
This is why cellular phone jammers are necessary.

The very fact that a need exists for these devices is a sad reflection on the world we live in.

In today's junk society, people don't give a damn whether they're being rude or not. Those who are yakking on cellphones in restaurants, movie theaters, etc., KNOW they're bothering those around them...but they don't care.

Fortunately, relief is on the way, thanks to these modern jamming devices. Coming soon to a public venue near you. Though illegal in the U.S. and likely to stay that way (thanks to the multi-billion dollar cellular telephone industry, the same folks that brought you the ECPA), these devices are readilly available in Europe.

Will be arriving quickly in Canada, Hong Kong, and tribal lands owned and occupied by Native Americans. A thriving black market will ensure these devices are as readilly-available in the U.S. as marijuana and cocaine.

Can't happen soon enough, as far as I'm concerned.

This is from the Trunkstar Yahoo group. This was originally posted by Sam of Scanstar.com:

Version 1.37 BETA of TrunkStar780 is available at:

http://www.scanstar.net/ts780beta.exe

While new version has been a long time coming, it contains many improvemsnts and corrections. At this time, TrunkStar780 will be co-developed and co-released with Scan*Star Spectrum Explorer. This means that TS780 and Spectrum will share the same code base from now on, and will share many new features.

This new version is the first of an expected 2-3 week cycle of BETA version before final release.

Hey Phil,

This is a legitimate question. I teach in a high school and I've known students that have been caught using cell phones to cheat on tests. I remember one student was wispering test questions into a phone that was in his shirt pocket to another student that was to take the same test later that day. High school and middle school students have no business having cell phones in class so a cell phone jammer would be great deterrent for those bent on cheating. If there's some emergency, their parents can call the school....easy as that.

2334. ARNewsline 1278 - Feb 8 2002

Amateur Radio Newsline Report 1278 – February 8, 2002

Amateur Radio Newsline report number 1278 with a release date of Friday, February 8th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Another Anthrax scare halts mail to the FCC in D.C. and ham radio growth may not be as good as it seemed. These stories are first on Amateur Radio Newsline report number 1278 coming your way right now.

(Billboard Cart Here)

**

AMERICA AT WAR: FCC STOPS D.C.MAIL DELIVERY DUE TO NEW ANTHRAX SCARE

The Federal Communications Commission says that it will not accept paper mail in the Washington D.C. area until further notice. This, after a trace amount of the Anthrax virus was found during a routine test. Amateur Radio Newsline’s Paul Courson, WA3VJB, is in the nations capitol with the details
--

The scant amount of anthrax contamination found at a Federal Communications Commission mail facility in Maryland last week was consistent with cross-contamination of mail. At least that’s what the result of tests conducted by the Center for Disease Control and Prevention showed.

The FCC's mail processing facility in Capitol Heights Maryland, outside Washington, was tested about a week and a half ago as a routine precaution. One sample taken tested positive for Anthrax. The C-D-C blames the problem on cross contamination of mail. This means one or more pieces of mail from another facility may have inadvertently brought the contaminant to the Maryland site.

The agency is arranging for the facility to be decontaminated and re-tested. Mail deliveries, which have been halted, will not resume until the area is found to be anthrax-free. For ham radio, this only affects such things as requesting or commenting on rules change requests.

The FCC said it would also test the mail room at its Gettysburg, Pennsylvania, facility to make sure that it is Anthrax free. Gettysburg is where most Amateur Radio related mail including license applications and renewals are sent and is not affected by this latest paper mail suspension order. At least not so far.

For the Amateur Radio Newsline, I’m Paul Courson WA3VJB in Washington.

--

Late last year five people, including two postal workers, died of the inhalation form of anthrax and more than a dozen were infected in a series of attacks that followed the terrorist raids on the World Trade Center and the Pentagon. So far no arrests have been made in that case. (Published news reports)

**

SPACE AND SCIENCE: ON-ORBIT COMPUTER FAILURE CAUSES ISS OUTAGE

Ham radio was there but it was not needed. That’s the basic wrap up after a computer failure aboard the International Space Station sent the 17-story complex into a slow drift for a few hours on Monday February 4th.

The temporary outage also disrupted voice communications with the ground using normal channels. It also brought science research to a halt. But NASA officials said that neither the station nor its crew ever were in any danger.

The station drift was halted about 17:00 GMT. That enabled the crew to begin the job of re-orienting the stations solar panel arrays. Once normal power levels were restored, systems and experiments that had been shut down were brought back on line.

The computer shutdown was eventually traced to a defective hard drive. James Hartsfield, a spokesman for NASA's Johnson Space Center in Houston said that the three ham crew was never in any danger as a result of the failure. He termed it nothing more than an interruption to their normal work day.

Launched last December 5th on board the shuttle Endevour, Russian cosmonaut Yuri Onufrienko RK3DUO and U.S. astronauts Daniel Bursch KD5PNU and Carl Walz KC5TIE are the forth crew to inhabit the I-S-S. In addition to all of the high tech communications gear the crew also has ARISS - the ham radio station on board the International Space Station as backup voice and data communications. It was available, albeit not needed this time around. (ARNewsline(tm) from NASA Release)

**

HAM RADIO GROWTH: CENSUS REDUX

Some dark news following the good news on ham radio growth patterns. The numbers may not be as good as we reported two weeks ago. So says Fred Maia, W5YI, who follows growth trends in ham radio. And Fred says that the numbers we presented are overly optimistic:

--
Fred Maia:

“The FCC database is a database of all amateurs who have been licensed for twelve years. Thats ten years for the license term and an additional two. The reason it stays in the database for the additional two is so that it can be renewed diring the grace period. Thefefore, the licenses in the database are two years more thanthe ten year term or twenty percent inflated.”

--

In our story we used statistics from several sources including QRZ, W5YI and others. But Fred says that there are more recent numbers that show things may not be as good as they may seem on the surface.

According to Fred, as of January 15th 2002 there are actually only 98,030 holders of the Extra class license, 86,425 legacy Advanced, 138,546 Generals, 318,603 Technicians and legacy Tech plus and only 39,972 Novice class. The total is 681,576. That is considerably lower than the 720,194 in the latest QRZ census and 10,424 lower than the adjusted 692,000 we believed to be accurate.

The bottom line. Once you take away the expired licenses that are in their grace renewal period, the club and military recreation stations and the like the numbers tell a different story. One thats not nearly as rosy as we and others thought only two weeks ago. (ARNewsline(tm))

**

WINTER OLYMPICS 2002: COMMEMORATIVE STATION ON THE AIR

The Winter Olympics are in Salt Lake City Utah and ham radio is helping to celebrate the games with a special events station. Linda Reader, N7HVF, has more:

--
“Its going to start on Thursday at 5 PM Mountain Standard Time and it will go until the 25th of February. It will be available on all bands, so people will only need to listen around. The station call will be W7U and the trustee is W7EO.”
--

Again, listen for W7U celebrating the 2002 Winter Olympics through February, 25th. (N7HVF)

**

Break 1

From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the WB2FKZ repeater serving West Babylon New York.

(5 sec pause here)

**

SPECTRUM: WHITE HOUSE PROPOSES PAYOUT TO CHANGE FREQUENCIES

The Bush administration says that it will propose setting up a $715 million fund to reimburse federal agencies that relocate their RF operations. This, for moving away from spectrum that has already been auctioned to commercial service providers.

In the past, federal agencies have had to negotiate with the winning bidders to cover relocation costs. In fact, following the September 11th terror attacks the Pentagon said it would not move off bands that it uses for military training and other purposes without sufficient funds to pay for relocating.

This created a stalemate over making available airwaves hotly desired by mobile telephone companies like Verizon Wireless. Now, in his budget just sent to congress, President Bush proposes setting up a fund to streamline the reimbursement process. Auction receipts to cover agency's relocation costs would be paid into the fund and federal agencies would be reimbursed for their relocation costs out of the proceeds.

What does this mean for Amateur Radio you ask? Simply that more spectrum that hams share with the government and military could be up for grabs sooner than most thought it might happen. But even with the subsidy some analysts of military communications say that it still could take several years before you see any spectrum moves take place. (Published reports)

**

FCC: OLYMPICS CAN USE 2300 MHZ HAM BAND FOR OLYMPICS

Broadcasters at the 2002 Winter Olympics have been granted a Special Temporary Authority from the FCC to use a ham band for their coverage of the Salt Lake City games. The S-T-A was made available at the request of the Salt Lake Organizing Committee R-F coordination group to use 2300 to 2305 and 2390 through 2450 MHz for remote pick-ups at various Olympic venues.

Unlike Australia two years ago, this FCC action does not take hams off the air nor does it forbid amateur use of the band during the period of the S-T-A. Instead it took action reminiscent of one that helped to establish ham radio's "National Frequency Coordination Council." The agency told all spectrum users that it had designated the Salt Lake Organizing Committee is the single point of contact or "SPOC" in regard to all Olympics radio frequency requirements. This delegated authority continues with the committee through March 31st. (FCC, Broadcasting & Cable, ARNewsline(tm))

**

PUBLIC SERVICE: HAM RADIO AT THE SUPERBOWL

Last week's Super Bowl played in New Orleans between the St. Louis Rams and the New England Patriots was a squeaker to the very last play. With the game tied at 17 to 17, in the 4th quarter, New England opted for a Field Goal that brought them victory in the very last seconds of normal play. It was a game seen by millions, but what t-v viewers did not see was the work of a group of New Orleans area hams who were a part of the behind the scenes communications effort for the game. Amateur Radio Newsline's Don Wilbanks, KC5MFA, lives in the Big Easy and has this look at the role that ham radio played:

--
While thousands cheered on the Rams and Patriots inside the Superdome and millions watched on television around the world, a handful of New Orleans hams were busy outside in the streets of the Crescent City.

--
“K5OEP go ahead.” “Checking in, nothing to report. Everything’s normal. WA5RT 2104 aaah, Poydras and South Claiborne.” “K5OEP roger, 2218. Other station?”
--

K5OEP is the call sign of Southeast Louisiana ARES. New Orleans area hams assisted the American Red Cross as they provided tracking for those sent to area shelters or hospitals should the unthinkable occur. Several Emergency Response Vehicles were in use feeding the workers and standing by in reserve should they be needed in an emergency. The ERV’s had a staff of 2 plus a ham with voice capability and APRS tracking. There were “Action Teams” standing by with a ham and a dual band HT. Hams also manned a command post trailer at City Hall as well as the Red Cross operations center on Canal Street and another Red Cross office in suburban Metairie. The communications operations began on Friday, February 1st and continued Saturday as well as Super Bowl Sunday. Tom Miller, AC5TM, ARRL Louisiana Section Emergency Coordinator and Keith Barnes, W5KB of the Red Cross were instrumental in putting the effort together. The local CBS affiliate, WWL-TV channel 4 did a lengthy report on the Red Cross, of which about a minute was focused on the hams. Several hams were featured on camera in the piece. Thankfully, this is representative of most of the radio traffic.
--
“K5OEP this is W5GAD.” “W5GAD, K5OEP go ahead.” “Just checking in Josh and, um, if it’s possible could we get a cup of coffee next time the truck comes down this direction?” “This is KC5BCR, we’re gonna take care of that coffee request.”
--

Only three things occurred that could be considered out of the ordinary... a semi-nude escapee jumped off a bridge to evade capture, a Rolodex in the Superdome caught fire from being too close to a light and the New England Patriots finally won the big game. And isn't it fitting that an underdog team called the Patriots would be victorious on this first Superbowl since September 11th. Next on the agenda for the city... Mardi Gras on Tuesday, February 12th. From Party Central in New Orleans, Louisiana, I'm Don Wilbanks, KC5MFA.

--

Before we leave this one we have some interesting statistics. According to the Broadcasting and Cable newsletter, Super Bowl 36 delivered the Fox Television Network a 42.5 rating and 61 share in what are called the metered Nielson overnight market ratings. This means that about 67 percent of United States households with television sets had them tuned to the game at some point during the telecast. (ARNewsline(tm) - Produced by KC5MFA with sound provided by KD5BLV)

**
RESCUE RADIO: HAMS ASSIST FOLLOWING QUAKE IN TURKEY

Amateur Radio operators in Turkey were among the first to respond in the wake of a earthquake that rocked the province of Afyon on Sunday February 3rd. More than forty were killed and at least 170 were injured injuries were reported in

the aftermath of the 6 point zero tembler. Structures were destroyed and lines of communications were cut. Enter Amateur Radio.

According to an ARRL bulletin members of Turkey's Civil Defense Search and Rescue Team responded following the quake. The bulletin quotes Aziz Sasa, TA1E, the president of the Turkish national Amateur Radio society as saying that S-A-R communicated with it's headquarters in Ankara and within the affected area. This was because ham radio was the only long and medium-range communication resource available until normal lines of communications were restored. Most ham radio communications was on VHF using a system of linked repeaters. (ARRL)

**

RESCUE RADIO: AMATEUR RADIO OPERATORS HELP SAILBOAT IN DISTRESS

The ARRL Letter says that Amateur Radio played a role in the rescue of two people aboard the sailing vessel Antigone. This, after it ran aground off Honduras on Thursday, January 24th.

Ed Petzolt, K1LNC, of Hobe Sound, Florida, told the Letter that, despite some apparently deliberate interference, members of the Intercontinental Net on 14.300 MHz helped relay communications from the vessel, which was equipped with an High Frequency marine radio.

David Walz, AG4LI/HR6, in Honduras was in contact with the boat and passed traffic from the stranded mariners to the Net. Petzolt said he was able to patch the US Coast Guard in Miami through to Walz, so the Coast Guard could obtain additional information and coordinate with Honduran authorities.

Petzolt said the two passengers aboard the 40-foot vessel were safe, and the boat was on the beach. The FCC is reportedly investigating the interference issue. (ARRL)

**

HAM RADIO SCHOLARSHIPS: QUARTER CENTURY WIRELESS ASSOCIATION

The Quarter Century Wireless Association has announced its funding several scholarship for 2002. There are eleven QCWA scholarships valued at $1000 each and five valued at $1500 each to be awarded later this year. Hams interested in applying for the QCWA Scholarships should contact the Foundation for Amateur Radio. The Foundation administers the scholarships sponsored by the QCWA. Additional information and an application form may be requested by letter or QSL card to the FAR Scholarships, Post Office Box 831, Riverdale, Maryland, 20738. (QCWA)

**

HAMFESTS: LIMARC N.Y. FEBRUARY 24TH

LIMARC -- New York's Long Island Mobile Amateur Radio Club will hold its annual indoor Ham Radio flea-market On Sunday, February 24th. Location is the Levittown Hall beginning at 9 a-m. More information is on the web

www.limarc.org. (N2DO)

**

THE HANDI-HAMS: 2002 CALIFORNIA CAMP FULL

The Minnesota based Handi Hams say that their California Radio camp is now full. This year, campers will be treated to presentations by Jeff Reinhardt, AA6JR, for Alinco, and everybodys favorite ham radio instructor Gordon West, WB6NOA. The dates for the 2002 Handi Ham California Camp are March 3rd to the 10th at Camp Joan Mier in Malibu. More is in cyberspace at www.mtn.org/handiham/workshop.html. (HandiHams)

**

BREAK 2

Here when you need us 52 weeks a year. We are the Amateur Radio Newsline, with links to the world from our only official website at www.arnewsline.org.

(5 sec pause here)

**

EMERGING TECHNOLOGY: SUPER NET HAS ARRIVED

Australia’s new super-net has had its first successful demonstration, proving it can carry an enormous amount of data between two locations. In fact, its not just fast. It is virtual reality come to life. Q-News Graham Kemp, VK4BB, has a look at what super net can do:

--
In its 'maiden voyage,' the new high speed networking technology --10 Gigabit per second Ethernet -- ran a revolutionary combination of technology that allowed two people, in different locations, to work together on a virtual 3D object, each being able to feel the object and see what the other person was doing to it. At the same time they could use a studio quality video link to communicate.

These two functions were tested in a situation where they had to compete against a volume of network traffic equivalent to Sydney's telephone system at peak levels.

The demonstration involved networking a virtual environment from two separate sites, CSIRO's Virtual Environments laboratory at the Australian National University and CSIRO's corporate headquarters several kilometres away.

--

According to Graham, networks such as this will allow users in several locations to feel computer generated objects such as body organs. Among other things, this tactile ability means a surgeon could train many students in different cities at the same time. (Q-News)

**

EMERGING TECHNOLOGY: CENTRAL STATES VHF SOCIETY CALL FOR PAPERS

The Central States VHF Society will be holding it's 36th Annual Conference later this year. The dates are July 26th to the 28th at the Sheraton Four Points Hotel in Milwaukee, Wisconsin.

And now comes an invitation to those interested in making presentations at this event. You are invited to submit an outline to Marc Holdwick, N8KWX, who is this years Technical Program Cairman.

Holdwick says that any topic related to weak-signal VHF operation is welcome and can be submitted in either paper or electronic format. But says N8KWX, those submitting will be required to have the finished work in his hands by May 5th to be included in the printed Proceedings.

If you are interested in taking part, you can contact Mark Holdwick by e-mail n8kwx@csvhfs.org. His snail-mail address is PO Box 6051, Buffalo Grove, Illinois, 60089. More information is on the web at www.csvhfs.org/CSVHF02.HTML (CSVHFS)

**

EMERGING TECHNOLOGY: RF CONTROL OF BIOMOLICULES

Scientists from the Massachusetts Institute of Technology Media Lab report that they can now control biomolecules with radio frequency energy. Bruce Tennant, K6PZW, reports:

--
Biomolecules such as proteins and nucleic acids are basic building blocks in nature. They carry out a wide variety of nano-scale functions, many of which have proven useful in drug discovery, drug delivery, biocatalysis, and bio-materials. But to optimally exploit these capabilities, researchers must be able to rapidly control their activity.

Now in the paper, titled "Remote Electronic Control of D-N-A Hybridization Through Inductive Coupling to an Attached Metal Nanocrystal Antenna, researchers describe a unique method to do this. One that employs the phenomenon of inductive coupling to metallic nanoparticles by radio frequency energy to specifically and remotely control DNA molecules. And they say, it works.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW.

--

Their paper was published in the January 10th issue of the journal Nature. More information is available at www.engeneos.com. (Technology Today)

**

INTERNATIONAL - UK: NEW RSGB PRESIDENT

The Radio Society of Great Britain has a new President. As of January 1st, Bob Whelan, G3PJT, has taken up the leadership position at the United Kingdom’s national ham radio society.

Whelan says that he is looking forward to the challenges ahead in raising the awareness of the value of Amateur Radio as a way of interesting the next generation of radio engineers and scientists. He will serve a two year term leading the RSGB. (GB2RS)

**

INTERNATIONAL – SOUTH AFRICA: NEW SHORTWAVE GUIDE

Media Network reports that a new comprehensive country-by-country guide to domestic and external shortwave broadcasts from sub-Saharan Africa, including opposition broadcasts to the African continent, has been added to the British DX Club web site. The guide, compiled by BDXC editor Tony Rogers and fully updated for the winter schedule period, is available in by-country and by-frequency versions. It can be found on the Articles index page of the web site at www.bdxc.org.uk. (Media Network)

**

CONTESTS: GREAT LAKES QSO PARTY

The Great Lakes QSO Party will begin on Saturday, March 9th at 17:00 UTC and run through Sunday March 10th at 04:00 UTC. The object of this contest is to work as many Great Lakes States as well as VE3 and VE4 Canadian provinces as possible during the allotted time. C-W and SSB are the only modes permitted and operation is on all bands except for WARC. Logs must be submitted by mail before April 25th to the address listed at the contest website. Look for more information at www.geocities.com/mdxa1/qsoparty.html. (E-mail)

**

DX

In DX, the Trindade 2002 PWØT team reports that several major sponsors have come forward providing vital support for the upcoming DXpedition. ICOM America will be providing a number of ICOM IC-756 PRO II transceivers. ICOM will also be sending along an IC-910H for satellite operation. Possibly the first-ever satellite activity from Trindade.

But that’s not all. Electril, a Brazilian manufacturer, has begun shipping antennas to the team staging area and Bob Heil, K9EID, of Heil Sound has personally made arrangements to insure that the DX’ers will have new reliable headsets. Meantime, JA1FGI and JA1WSK have covered the cost of purchasing and shipping a complete RTTY, PSK-31 and SSTV equipment package. Lastly, its reported that the Six Meter Amateur Radio Klub and the Chiltern DX Club are the first organizations to provide the D-Xpedition with financial support.

The operators will leave Rio de Janero on February 15th for Trindade. More information is at the DXpedition website located in cyberspace at www.trindade2002.com (PW0T release)

**

THAT FINAL ITEM: THE SWOOPER

And finally this week, a loud buzzing noise being heard in the international shortwave band is apparently a new RADAR system used to measure wave height. According to Mark Fine, the system is located at Barnegat Bay New Jersey and transmits a one megahertz wide signal in varying five megahertz wide segments. Take a listen:

---
swooper audio here
--

Fine tells Amateur Radio Newsline that he made that recording on 4.795 MHz at 1850 UTC on February 5th. He was listening on a Drake R 8 A receiver set to upper sideband and a 2.3 kHz bandwidth. He says that during the evenings this beast takes over a whole band and is heard as far away as Europe and South America.

Already, some SWL’s have nick-named the noise a "swooper" because it sweeps quite fast making a "swoop" noise as it goes by in SSB. Others have called it the Windshield Wiper Network, which they say is very apropos. (DXLD, CGC Communicator with “Swooper” audio provided by Mark Fine).

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Body handling: HTML body converted to readable text

you are expecting it to pick up from a Km,of course dependant on a power output,but that is not the point of any frequency counter or flash tune device.

i would def send my Alinco back if it did that,as i would spend most of my day finding pagers and data channels,sdo not buy any counter unless you intend to go out and about with a scanner,unless you are lucky like me and have it all in one.
You go around your town or city mostly with targets in mind ie a new shopping mall has just opened and you want to find there freqs without searching or you have searched and found nothing,you go to the site as a member of staff transmits you get ready,its not always going to work,for a start there could be lots of other rf in the area causing problems,you then have to have a reasonable knowledge of spectrum use/repeater shifts in your country so you can check to see if freq is single freq or duplex,as the counter will read in most cases the tx freq of the staff member in front of you,so if he is found on 462.325 in the UK as with most allocations can be dual or single,if dual then one has to check 456.825 so you can then correctly log the frequency find.

regards

How does that make him the dumbest salesperson you've ever
encountered, and why is that a 'bad' answer? If the only spot you can put
the dish has a tree problem, then the trees will _have_ to go if you want
the system. That's neither stupid nor bad, that's the way it is. If it bugs
you to cut down a few trees, particularly pines, replant with a higher
quality hardwoods. Or don't cut the trees and do without the system. Your
choice. Not stupid. Not bad. Just a choice.

The AR5000+3 is considered the champion of wideband receivers. I had owned an R8500 and have been boucing around the idea of getting a 5000+3.

The R8500 is a good all round receiver. It does a nice job on HF although my personal
experience would place the R75 a notch above it. On VHF/UHF the R8500 is great if
you suffer intermod problems as the front end is rock solid. BUT I have found that receivers
like my old Pro-2006 are just as sensitive (Of course though the R8500 covers through 2Ghz).

I would say if you own a good HF receiver and good scanner you may not be all that happy
buying an R8500.

The 5000+3 on the other hand has alot to offer. If you are into satellite reception the many bandwidths
the 5000 offers is a plus. The sensitivy/selectivity straight through 2.6ghz is apparently second to none.

Best bet is to read the Yahoo group on the AR5000 and search the archives at strongsignals
and the like.

Remember though. The R8500 is coming down in price ~$1400 where the 5000+3 still
hovers around the ~$2100 mark.

In Ontario, and most other provinces, it is legal to have a scanner in your vehicle. And you are allowed to listen to cellular and other phone calls.

2352. HELP MDT MONITOR Speaker Problem!

Newsgroup: rec.radio.scanner
Date: 2002-02-11 18:51:46 UTC
From: n9mxt1@aol.com
Message-ID: <20020211135146.02660.00001019@mb-fe.aol.com>
Source record: 52417

Hello,
I did the Discriminator MOD for the PRO-2006 to decode the MDT traffic with the MDT MONITOR for windows software. It works GREAT!

Ommm my question is however when its hooked from the scanner to the sound card I can hear everything BLASTING out of my computer speakers. You can even hear the squelch hissing out the speakers even though the squelch isn't even open. I even turned the volume all the way down on the scanner and its still LOUD!! I had to turn the volume off on the computer just to be able to not hear the hissing and tones!!! Just wondering if their is something I can do to eliiminate the BLASTING outside the speakers? Like I said however everything is working perfectly besides that!

Please let me know...

Jeffrey - n9mxt1@aol.com

One way to do it is use a mixer with a 45 MHz local oscillator.
This will only work for the old AMPS standard phones & Nextell.
With just two antennas, one on each port of the mixer cut
for 1/4 wavelength, you can get maybe 10 to 20 feet range.
No signal is transmitted until someone is using their phone,
and you can interfere with more than one user! In reality,
the phone user will probably have to move away to get a
better signal thus your problem is solved.
If you are adventuress, you could use a couple of small signal
amplifiers, one on each port. You might be able to run several mixers
with antennas around a room and daisy chain the 45 MHz L.O.

Be careful, be discrete, stay out of trouble!

If you can't confiscate them at the door tough luck. They could use FRS or commercial 2-way or home brewed stuff on the military band to do this. You wanna jam every frequency in the spectrum?
To cover up your school, you'd have to wipe out 3 blocks in all directions to be sure you blanketed every spot in the building. So somebody 2 blocks away dies of a heart attack because the can't call for help - because you can't do your jab.. No wonder we're turning out idiots from our schools with braniacs like this for teachers.

Think about this when you die on a sidewalk somewhere while passers by try to call for help, but can't because you can't reach your lovely little jammer's on/off switch in you pocket.

Seeking to purchase an older Bearcat (Electra Corp.) model BC-101 programmable scanner.Has 16 channels and is programmed by binary coding using 16 switches on the front of the radio.
Cosmetic condition is NOT important, but MUST work AND PROGRAM properly, as well as RECEIVE programmed stations.No "problem" or "fixemup" units wanted, but again, dirty, dented, scratched, scraped, etc. is NOT important.
Please Email me directly with a DESCRIPTION of your unit and the price you are asking (BEST price in first Email, please...must be "REALISTIC" (not paying "new" price...) and NO 'dickering 'or 'offers' made or given.)
All replies answered. Thank you !!

We have reduced the price to $199 !!! Get one while they last.

We have a supply of Optoelectronics 3000A Plus Counters. A very special purchase allows us to offer Optoelectronics 3000APlus top of the line portable frequency counters that are absolutely brand new, complete with accessories, still in the original factory boxes!. See more details at the ebay auction link below. Go to this link for details on purchasing one - http://www.datadeliverydevices.com/opto.htm or you can email me (remove all CAPS from the email address)

The Optoelectronics website has all specs, details
and the pdf manual at http://www.optoelectronics.com/3000a.htm

I'm not impressed by this self serving declaration, but assuming you are smart (big assumption) and you know exactly what you're doing (even bigger assumption)...

>I'm told that one method is to use another modified cell
>phone to disrupt the control channel within a small radius.
>Is this true? If so, what model of cell phone, and where
>are the plans?

I haven't heard of this, but that's not to say it can't work.

>Any info you can contribute about modifying existing cell
>phones to convert them to jammers will be appreciated.

Don't expect that from me. However, you might try reading up on how electronic warfare works. In particular, read about tapped delay line repeaters.

Legalities aside, you'd do well to take measures against getting caught. The FCC takes a very dim view of this sort of activity, even if you are who your e-mail address says you are and you're working for the state of Minnesota. The feds will make your life a legal hell no matter who you're working for if they figure out what's going on. My advice: use passive methods. It is not legal for you to use a jammer, but if you should happen to have a shielded building, well, that's nobody's fault.

Good bye and I hope this stunt of yours fails miserably.

I have never seen a commercial building inside of which you can receive
AM radio (530-1700khz). I thought Faraday covered that rather well.

Yes, you're right in most of this. But there are some practicalities that become apparent only when you're operational. A pager would become necessary if the cellular network's reliability became compromised.

Prior to cell phones, I carried a pager. Then a pager and a phone, as widespread use of mobiles made public phone booths almost extinct, making the phone a necessity.

Especially for someone who tries to stay physically active, carrying both devices at all times is awkward.

While I have experienced a couple of "outages" of the pager network, I have never personally seen a cellular network failure. I've read of them, of course. But they're much more public events than pager network failures.

And for many of its failure modes, an astute user can see that a cellular network is inoperative, contact base, and organise an alternative arrangement for the duration.

You also learn to leave a verbal trail so that you can be found, especially if you're sleeping away from home.

John

Neil:

the 2002 Passport rated the R8500 and 5000+3 the same '4' stars, quite respectable. i only have experience with the R-75. you may consider getting an R-75 AND a scanner... i own a PRO-2006 scanner. first it will be cheaper having two, second you'll have two units so one can scan while you listen, third HF (AM, long distance) and UHF/VHF (N-FM, short distance) are different beasts so dedicated receivers make sense.

phil :)

For $170 there aren't any cons. Just get a unit with a date code of 11A01 or greater. Otherwise
there are a few bugs to contend with.

Make sure you get one with date code later than 11A01. And with
firmware version 1.01 or later. Version 1.00 had a bug wrt the alpha
tags on some of the channels. Check the firmware version by pressing
"3" immediately after turning it on.

Most people are quite happy with the unit, w or w/o the alpha tag bug.

It's main deficiency is the lack of CTCSS capability. If you feel that
is important, you may not want the PRO-93.

>those bent on cheating. If there's some emergency, their parents can call
>the school....easy as that.

An even easier (and legal) way of doing it is simply banning
possession of cell phones in class. They can leave them in their
lockers or, if they have no lockers, those students actually needing a
cell phone that day (to call someone to pick them up, etc.) could
leave the phone in the office for the day.

Teaching kids that breaking a law when it's "justified" is okay is
something contrary to the very basis of education.

Thank God that someone can just ANSWER THE FUCKIN' QUESTION and give a straightforward answer with all the editorializing !!!!!!!!!!!!

Keep up the good work Cellular Charlie !!!!!
We need more people like you in this news group.

I happen to own two 8500s and think that the 8500 is one of the most
underrated performers on HF.

The 5000+3 seems to be a mix of only fair qualities with a couple of
really outstanding qualities. Unfortunately I don't own one so I
can't give personal experience. I *can* say that I did stay away from
it because it had that "classic" AOR build to my eyes -- don't look
too hard or it might fall apart.

The 8500's weakest point are its filters -- they are crap.

Its strong points, IMHO, are its absolutely tanklike front end, great
build quality, and rock-stable oscillator. Forget the AM filters;
tune using ECSS and just leave it sit -- you won't have to touch it
again.

Passport a couple of years back put them side-by-side in a test.
If you are interested I can find and summarize that report...

>listed as one of the scanner types.

You've got the link to Win93, which is definitely the best software to
get. There's also an unauthorized, early version of GRE/RS's software
floating around as freware, but that's incomplete and obviously has no
support. It's unclear whether RS will ever finish and sell that.

That cable they sold you (20-048) will not work with the 93. The best
ready-made cable is a Casio cable, by Purple Computing, www.pfranc.com
. Look for the page where he tells you what adapters are needed for
the 93. You need to convert the 3/32" stereo end to 1/8" mono.

You should be able to get your money back for the wrong
cable/software. You're not the only one to wind up with that, and I
have not heard of RS not taking it back. (Enough "not"s in that last
sentence?)

I had always thought of my R8500 as more of an HF receiver. Although anyone living in RF
hell would definatley find the VHF/UHF perfomance key.

I am personally aware of many buildings within which cell phones will not work because the buldings are completely shielded. People needing portable phones within these buidings used dedicated internal systems.

I have yet to see a warning at the door that "your essential services cell phone won't work in here." And I am not aware of any law, statute, regulation or whatever, in any administration anywhere, prohibiting theatre or other building owners or operators from shielding their premises to prevent cell phone operation.

What do you do when you are in a building where operation of cell phones is prohibited for safety reasons? You are aware that your phone is communicating with the system any time it is turned on, regardless of whether you are talking or not? How disabling cell phones differs from requiring that they be turned off eludes me; as long as a notice is posted.

The thing that really seperates the AR5000 from just about anything is the VHF/UHF performance.
Everything user opinion i have read rates it second to none.

I never checked mine for RFI. I'll have to do that this summer. Even
though the TV is on cable, it'll probably tear pretty badly every time
a bug gets zapped. And a large beetle can destroy an entire show.

I guess I was mistaken in my assumption that most restaurants and
theatres would have a working telephone in the establishment.

Oh and I love the previous comment about jamming police communications -
which is, of course, much less difficult than disabling cell phones.

From link above.

At its simplest, jamming any radio device involves transmitting a signal
on the same
frequency and at high enough power that the two signals collide and
cancel each other
out. The effect is similar to what happens when you drop two pebbles in
still water and
rings of waves radiate out from them. Where the rings meet, the water
becomes smooth.

This ain't what I was taught about multi KW jammers by my Uncle Sam.

Was something like 6db higher signal strength at the targeted
receiver.

Gotta love the description.

MUCH narrower bandwidth. A little basic research will correct your
misapprehension. NAMPS is still VERY wasteful of bandwidth.

This doesn't really require an answer!

Please reconsider your idea of trying to jam cellphones. It is as antisocial as the behaviour of the cellphone users. Re-education is the only real answer. Remember - in America's litigious society you will be opening yourself to endless lawsuits!

On the other hand, if he adds a discriminator output to his Pro-2006
(simple mod), there's plenty of things besides WEFAX or RTTY to "listen"
to. (Ham packet if nothing else.)

I mean, he's already *got* the 2006.

Ron of that ilk. (Boo!)

Tsk Tsk Tsk. Get one of each. My $54 Antennawarehouse Scanner Beam gets
the Washington DC Combat Air Patrols from 160 air miles away out of the
BACK of the beam. Of course the "equally-poor in all-dirctions" RS Discone
has no problem with that signal either. The beam adds about 50 miles of
coverage in the military air bands, and maybe +20 miles of coverage in the
marine-vhf band. And the Beam does null all weak signals at 90 degrees,
but it sure works great in reverse. That 90 degree nulling is a blessing
to the marine bands, where I get almost no intermod from it. The discone
loves to add cell pagers from all directions to marine broadcasts.

There's a fairly trivial mod for the PRO-2006. The discriminator output is right there on the board. You need a wire to the TP2 post, one to ground, a socket, and maybe a cap our two. Check any 2006 page for mod or links to it. (It comes with pictures.)

Ron of that ilk.

Agree completely, my beam antenna gets rid of a lot of junk, unlike the
useless discan't.

Get oakland, sf, airtraffic and my local pd, without that other junk.

my 2 cents

Use 50 ohm for 50 ohm applications, and 75 ohm for 75 ohm applications. This
will give best results.

Most scanners and amateur gear use 50 ohm.

Impedance matching is more important for transmitting than receiving though.

If you want only to Receive, you can use 50 or 75 ohm cable. Only when you want to send, you must have a lock at the impedance of the cable.

Greetings from Germany

2427. Icom R2 Problem

Newsgroup: rec.radio.scanner
Date: 2002-02-12 12:12:57 UTC
From: DeWayne <ke9k@mac.com>

I just bought a new Icom R2. Problem is that it only lasts an hour or so on any kind of batteries I've tried. I did a complete reset and installed new alkalines, same thing, lasted an hour without even scanning or using any audio at all, just sitting there turned on. Any ideas? Thanks!

If it's new, send it in for repair, in fact, do it anyway. A set of decent Alkies last a LONG time in a R-2! Make sure you try it with a totally different batch of batteries before you sned it back, and they find nothing wrong. I got some crappy AA batts a couple of years ago that were about 75% dead on arrival.

You should get at least a whole day's worth of operation, at reasonable volume and lots of traffic on a set of any batts at all.

Mine is sitting in the drawer, it's not worth using. It pushes the R-2
to intermod on some freqs, and is deaf elsewhere. A 12" peice of piano
wire soldered to an SMA connector blow it away.

Sounds like you're talking about those inconsiderate louts
who talk on the phone in the movie theater or at the show.
In this case, a baseball bat would probably work well.
Or about 18" (1/2M) of 1" (2.5cm) water pipe, with a
bicycle hand grip. These are called "Equalizers." ;-)

Well, from your tone, it sounds like you find it obvious that
if you get an emergency call while at the movies, you'd
immediately exit the auditorium, which allieviates the
need for the jammer (or the baseball bat.) This is called,
"politeness." (or "your job.") :-)

A broadband jammer could be built, although I don't know
how much of a PITA it would be to build one that could
be hand-held; but as others have noted, in the US at
least, using it could land you in the slam.

I've got some neighbor with a leaky microwave oven or something,
which almost every day, around mealtime, jams my TV, usually
right in the middle of my favorite show. Can I call the FCC
and ask them to investigate? I get two noise bars at 120Hz
across my screen, and the sound drops out completely. I went
to ask the neighbors if they were cooking, but there's some
hostile mexican guy about three times my size, and a dozen
times more tough than I am who scared the hell out of me and
made me run away.

Bug zappers are bad, as they kill the wrong bugs. Just get some
army-surplus 15% DEET. Works like a champ. :-)
(so-called "ultrasonic" mosquito repellers don't work either.)

Well, I'm hard-pressed to imagine anyone admisistering CPR and talking
on the telephone simultaneously. It's about the brokers and so on,
and I still say the best jammer is an 18" piece of water pipe. :-)
There was one time in a movie theater when I wished I had an Uzi.
But if I'd had one, and used it on the teenage asshole, I'd probably
still be in stir. (I'm not in stir at the moment, BTW - in California,
I'm completely clean.) :-)

And variants for years before.

"Emilio Goldstein" has *always* been getting scanners smashed and lead off
in handcuffs for years now. Police, store security, CIA, men in black,
space aliens, etc. If you ask me, they should handcuff the scanner and
smash...

What that troll needs is a Thinking-Brain dog to help him out.

Ron of that ilk.
They're coming to take me away, hoo-hoo, hee-hee, ha-ha...

"Simply" banning phones? If only life were so easy. You think a cell ban
would have stopped this kid from cheating? I think his objective was to keep
his phone conceiled, so uless you want to add metal detectors and with the
new mini-phones, full cavity sdearches...your plan is somewhat flawed.

Yes, there is something to that effect out on the internet. I happened
to see it several weeks ago. Check out this page:

It's funny that many posters mentioned emergency workers, because I don't
think those same workers wod'nt want any cellphones in thier hospitals now
would they? There ARE places where cellphone use can be justifiably blocked.

>>
>>Price $175.00 plus shipping
>>

Bill Cheek's "bible" on these receivers (2004-6) suggested taking out the internal transformer to avoid heat. The suspicion was this would be the last of the unblocked radios and would have to last the user a long, long time. Also, a wall wart is more likely to keep a surge or lightning hit confined to the wall part and out of the receiver. The 120VAC lead in to the built-in transformer could bring in something that would arc over to the delicate parts of the radio. The convection would also draw in more dust.
If I were looking to buy a radio this old, even the small amount of heat from the transformer inside the case would possibly be an issue after all these years.These aren't like really old radios, with easy to get, easy to change parts...

>will give best results.
>
>Most scanners and amateur gear use 50 ohm.

Few scanners actually come anywhere near 50 ohms at all the frequencies
they cover. The included rod antenna, which usually hooks in at the same spot
as the "50 ohm" coax connector can present an impedance from 20 ohms to 100's
of ohms at different frequencies from 25 to 1300 mhz.
Go with the lowest loss cable you can afford which will accept connectors
that match the antenna and the scanner with the fewest adapters. I have found
many commercially sold adapters, splicers and elbows to occasionally be very
lossy.

This issue has been discussed to many times in a great way. I advise
you to check these places and SEARCH for keywords:
http://groups.yahoo.com/group/BC245XLT/ = keyword: PRO-93

http://groups.yahoo.com/group/PRO-93/ = keyword: BC-245XLT

I personally have recently chosen the BC245XLT because 1) as Im a
beginner in this hobby, the bc245xlt is more easy to use and more user
friendly, 2) The multitude of commercial, shareware and freeware
programs you can use with the 245xlt and the possibility to use the
245xlt with your computer, 3) The bad reputation (in my case)RS has
achieved with the quality of their products.

But it is a tough decision. A lot of good comments have been heard and
said about the PRO-93.

Thats my .2

Maybe...

But, if you are trying to block cell phone signals in hospitals because the signals play havoc with life support machinery, it doesn't make any sense to do it with a strong enough signal to block cellphones. It just seems like you would be compounding the problem.

But what do I know...

Have a look at the ICOM literature that you got with the radio.
See if it mentions replacement or repair under warranty.
Might also be an idea to contact the person at ICOM with whom you were
dealing and ask them about a replacement directly.

I have been listening in on radio traffic at my local international airport and can understand most of the stuff being talked about, e.g. airline names, wind speed and direction and altimeter settings being called out, etc. as well as other weather conditions and birds in the area if applicable. There are, however, some things I have heard which I don't understand, such as:

"Wingspan Airlines [not their real name] contact departure 19-8 airborne"

"Wingspan Airlines contact ground 21-9"

What does this stuff mean? What are the numbers about?

I took the entrance exam for air traffic controllers twice about 10 years ago but flunked, so I don't have sufficient background to know this.

More likely, you'll need to call the maker of your TV, and tell them
you won't be buying any more of their products until they put in
proper shielding.

Now if only I could find a TV as well shielded as the better NEC
monitors...

Personally, I just have to wonder what emergency can't be announced by
a vibrating pager or phone.

SMS messaging to the phone would also alleviate distractions during
driving; unless you're on the interstate, you'll hit a red light in a
block or two, and can read the message then.

I'm still wondering just how sensitive the equipment has to be to be
killed by a couple hundred mW from a cell phone, but not harmed at all
by a ham with a 50W rig in the parking lot. Considering that we've
provided emergency comms for hositals many times in the past, (some
from inside, some from outside) using several VHF/UHF bands, without
blowing anything up, there's something pretty fishy about that.

Problem solved... I turned the MIC input to mute. Still picking up the audio and don't hear a thing now!!

Thanks!

Jeffrey

Hello,
Anyone living in the Chicago area that knows some frequencies I can monitor the MDT traffic? I already have ISP and some local departments.

Please email me any others you might know about.

Thanks for your time

Jeffrey

>>I had one of these for years and it never even got warm?
>>
>>

See! I guess I learn something every day! Sounds logical.

I guess I just have bad feelings about the 2004, 2005, & 2006. I had a 2004 and I know some that own 2006's. I was less than impressed with the sensitivity of the receive of these radios and always thought what's it worth if you can program 300 - 400 channels but yet the receiving range is limited in comparison to any Uniden model I've ever owned.

But, yes your response on the power supply does make sense.

Just My Opinion

GBT

Every response so far has been correct. Purists will tell you to stick to 50 ohm when your rig is "designed" for 50 ohm connections (noted by the SO-239 connector). However, in actual practice it makes little difference. In fact, even shielding makes little difference in RX only applications.

Indeed, however the recever for this purpose can be the cell phone
handset, and while the base station may be running 200W ERP, you
have the inverse square law firmly on your side! Your jammer is probably
a hell of a lot closer to the phone then the base station is.

I tried to put my scanner online to broadcast Olympics scanner audio
at shoutcast.com but MSN blocks my IP address from the shoutcast
server and I can't find a way around it.

There is very little digital being used, a couple of TGs on the UCAN
system are digital and there is some encryption on fed freqs but the
vast majority of comms are in the clear.

That's true. I don't know at what power level or at what frequencies medical equipment is sensitive. I guess if you had it below the threshold for the medical equipment, but above the relative power of the tower, it would block the phone. But it really wouldn't keep cell phones from putting out a signal, it would just keep people from using their phones.

One consideration for the use of shielding,
is if your feed line passes near a source of interfering noise,
like your computer, or other electrical device.
OTOH: sometimes a leaky feed makes up for a poor antenna.

Other jargon often heard is the use of runway identifiers based on shortened
compass bearings.
927 = 90ï¿½ - 270ï¿½
1331 = 130ï¿½ - 310ï¿½
and so forth.

I have a feeling that the real reason for the ban on the use of cell phones in hospitals it that the noise is irritating! The EMC problem makes a lovely excuse however.

I should note that I have actually suffered embarrasment due to RF from a phone, I was working FOH sound at a gig and without thinking I had put the phone down on the dog box behind the main sound desk. This mixer was feeding 20KW of Nexo alpha and when someone called me the whole audience got the benefit of some lovely 'static'.

Regards, Dan.

My comment was more about the BS from the website.

And you're way low on the ERP. Hmm, I wonder if a google for "TACJAM"
would get any info, or if it's still classified..... I do know it gets
google hits. I haven't looked them all up.

If the receiver has a capture ratio of >6db.

Unc's jammers jam mostly AM signals - cell phones are FM.

With synchronous detection you'd have to generate a signal 15db or so
higher than the signal you're trying to interfere with (at the
receiver, again). Even higher if the receiver was really good. (We
used to receive RTTY signals that were ~10db below noise, and I think
there are some off-the-shelf detectors that are better than that now.)

In your assumption of a guarantee that they would? Yes, you were
mistaken.

>Oh and I love the previous comment about jamming police communications -
>which is, of course, much less difficult than disabling cell phones.

Not at all. A PD walkie-talkie can get its job done even if the
receiver is being jammed. A cell phone can't register with no
received signal.

Since the path was the same for all of them, #2 is the most likely.
Unless someone posting to your provider's news server is playing
games.

They normally leave off the first digit - 1. So if they say "contact ground
on 21-9" the actually mean 121.9.

Have you tried Ebay... several HP-IB / 488 boards out there... search in completed items and maybe contact someone who (if your lucky) didn't sell there's. I have been forced to look for difficult to obtain items on Ebay and with a little patience been very successful.

Source record: 52311
Cross-posted to: alt.radio.scanner,rec.radio.scanner

What's the difference? The RS is 60 some bucks; the radials are crimped tubing. The rest of the unit seemed ok. The Diamond is costing me $116 (inc. UPS ground and the Motorola/UHF adapter). It's radials are stainless steel rods and the adapter is solid brass. The only drawback is that I live 40 miles from Diamond and they would not permit me to come to their plant in San Marcos to pick my stuff up. A minor complaint.

Will the Diamond withstand next years 67 MPH winds? Ask me in a year and I'll tell you...

Otis

If you are planning to use it indoors (mounting it in the rafters) you'll be O.K. However, if you are going to mount it outdoors...read my posting from Sunday: "67 MPH Winds Destroy My RS Discone..."

In most of the hospitals I've been in recently the hospital personnel all carry cellphones issued by the hospital and linked to an internal cell system. So I guess those workers don't mind having cell phones on premises.

And they never seemed to mind when I used my cellphone in a discreet, non-obnoxious manner.

I think this is mostly a case of throwing the baby out with the bath water. One cell phone user acts in an obnoxious manner, and we respond by jamming all cell phones? No thank you!

I don't think it's a matter of annoying people, it's a matter of interfering with medical electronics.

This is like the folks who use their scanners or portable radios on aircraft in a "discreet, non-obnoxious" manner in complete oblivion of the fact that they may be radiating on frequencies required for safety of flight.

Some years ago I was involved in testing low powered hand-held communications equipment in and around intensive care equipment - it is surprising what chaos a low power radio signal can cause to equipment which is monitoring the very weak electrical signals generated in the normal operation of the heart. And, of course, the cell phone not only radiates any time it is turned on, it actually transmits - that's how the system knows what cell you are in.

Internal cellphone systems may very well be, I have no personal first hand knowledge, certified to meet medical electronics standards; just as equipment can be certified for use on aircraft - provided you can afford to pay for the tests.

Dave

Ok, what is the bandwidth of your normal pocsag paging transmitter,
and then the bandwidth of your normal Cellular NAMPS signal?

Share your facts with us. Please.

Depends. On most public safety trunking systems, if the subscriber unit, ie the PD walkie Talkie, cannot hear the control channel, it is useless. Won't transmit. If you jam the control channel, which is easy, then the radio will not work.

Those are not normally "Cell" phones, but simply wireless phones, that
can operate on any number of bands, and different formats.

I'm looking for information on understanding the Tallahassee Police Department calls on the radio from car to car and car to dispatch. Anyone with experience please post! Also any info on the codes/terms that Tallahassee Fire Department and Tallahassee Memorial Hospital uses would be of great help.

On a less important note, I'm looking for TPD ten-codes and signal codes that are more complete and up to date than the typical (and awesome) Tallahassee websites.

Thanks for any help,

-Alex Calderon

It isn't - unless it's very badly designed or made! All medical electronics has to be EMC tested and certified (at least it does in Europe). A cellphone, handheld radio or whatever will have NO EFFECT at all on medical electronics. The reason that hospitals ban phones is simply that the noise is irritating, though they love the EMC excuse.

The only "cure" for the cellphone menaces that insist on bellowing into their phones in public is re-education. Perhaps with a baseball bat.

On phone frequencies, many transmitters are set up to only broadcast the OUTGOING (from the landline) side of the conversation. There's no reason to "repeat" the mobile's side, as it's going only to the landline phone. Of course if two phones are talking to each other you could hear both...if you have two radios and can find oth frequencies.

On FRS, it's probably just a function of the radios' distance from you. FRS don't use repeaters, so you'll hear only those relatively within "line of sight.

Search www.ebay.com for FA-126. This is a Casio Boss programming/data cable. Im not telling you to use the buy it now but only a $2.00 difference and they have been going pretty fast.

The FA-126 is a 2-way cable but you still need the Radio Shack adapters 274-397 and 274-368. You would need that if you bought a www.pfranc.com cable for $22 plus $5.00 shipping. You can also search for a Protege II Data Organizer. It comes with a cable that works (unknown if you still need the adapters). That should run $22-$30. Some say run to Best Buy for that since they are in a clearance status. I found some online but that $4-$7 for shipping. The advantage of the Protege is you have a electronic notepad for next to the phone now. ;)

Good luck and the waiting is the hardest part.

Yes.
One adapter changes the size (sub-mini to mini) and the other changes from stereo tip to a mono tip.

I found some schematics for the TI-85 on the web. Of course they use the same pins from the DB9 with the Pro-93 but one TI-85 plan had it using a 3 contact or stereo plug and another had a mono 2-way adapter. Weird.

You will enjoy the ease of programming it with the cable and the software from Mr. Don Starr, Win93.

Its a really good unit, even with the first revision text bugs.

If that's the case, an RF detector instead of a jammer would be
more appropriate from every perspective I can think of.

We have reduced the price to $199 !!! Get one while they last.
We have a supply of Optoelectronics 3000A Plus Counters. A very special
purchase allows us to offer Optoelectronics 3000APlus top of the line
portable frequency counters that are absolutely brand new, complete with
accessories, still in the original factory boxes!. See more details at the
ebay auction link below. Go to this link for details on purchasing one -
http://www.datadeliverydevices.com/opto.htm or you can email me (remove all
CAPS from the email address)
The Optoelectronics website has all specs, details and the pdf manual at
http://www.optoelectronics.com/3000a.htm

What a bargain. I got mine today (Melbourne Australia) and it is one hell of
a counter. Anyone want to buy my Scout? This baby leaves it for dead,
especially with the RS232C cable & software. At US$199 it HAS to be a
bargain. I'm sure glad I took the plunge & so will you be if you buy one.

When a storm came by my RS discone would lose some of its rods and I
would have to walk around the outside of the house looking for where
they were blown. Of course I replaced it with a diamond which, like the
poster above, is about 13 years old and is still as good as it was the
day I bought it!

This is what I use, however mine is installed in an attic so it's always protected. I've had both the Diamond and a RS discone (circa 1987 or so - no top element). The RS model worked great (except for HF - no vertical, remember?), but was a toy by comparison when it came to construction.

John...how well does it work in the attic???? I have mine on my old TV ant. pole on the roof, but this means running 50' of coax to my basement den. My Diamond is only about 8 to 10' from my power lines. Does anyone think this can degrade my reception of lo-band??

Message-ID: <3C6AA853.FF8D125@optonline.net>
Source record: 52212

The PRO-92 cable is 100% compatible with the PRO-93.

BUT, Radio Shack does not sell a PRO-92 cable in the store, only through mail order at the store or over the phone. This package sells for around $70.

If you bought a cable/software package at the store, and it does not say FOR THE PRO-92 on the box, take it back. The cable will not work with the PRO-93.

2548. Antenna for 108MHz - 174MHz

Newsgroup: rec.radio.scanner
Date: 2002-02-13 18:46:00 UTC
From: Hanno <hannoo@hotmail.com>
Message-ID: <3c6ab48d.0@news1.mweb.co.za>
Source record: 52217

Hi Everybody,

I have been an avid shortwave listener over the last 2 years and have now taken an interest in lsitening in the VHF range. I have an old Kenwood R-5000 with a VHF converter installed.

My question is: what inexpensive VHF antenna can I construct or purchase that would suite my rig and that frequency range? I don't live in the USA either so that cancels out many purchasing options for me. A pity, you folks in the States have so many more options than myself living in a third-world country.

Advice is welcome. Thanks.

Hanno

OK, now I'm confused. What I have is something called the "Scanner PC Programming Kit" (Cat.#: 20-048). It only cost $14.99 and I bought it at the store when I bought my scanner. It came in a plastic pouch and consisted of a CD-Rom and the cable (DB-9 on one end and a 1/8" stereo mini on the other). The guy in the store said it would work with the scanner I was buying (93), however, I found he was mistaken after I loaded the program. The closest model in the set up to the PRO-93 was the PRO-92 (or at least I thought it did after looking at the website, it didn't list the Cat.# for the 92). Unfortunately I'm at work and the program is at home.

I'm not familiar with a setup that costs 70 bucks. I couldn't find anything but the one I mentioned above on there web site. Can you help straighten me out??? Your help is greatly appreciated.

Once again, Thanks, Stan

I was at an airport at the edge of the airfield once and I saw a sign
that said "HOLD 16-34." 160 degrees plus 180 degrees equals 340 degrees
and this was the approximate orientation of one of the runways as far as I
could see. The sign appeared to be facing any aircraft about to enter a
runway from a taxiway. Was this sign a sort of "stop sign" for aircraft
about to enter runway 16-34? If not, what did this sign mean?

FYI, mine is 11844 and is probably around 9 months old.

However, they may well have different serial numbers for the UK, Euro or
US models...?

I have my discone in the attic, and I find it better as it doesn't bring in
so much *white noise* static, I have compared it indoors and out, signal
strength is identical, just a clearer signal when its in the attic.

People please! Focus on the scientic means and not on the legal or moral rights. Todd questions not on how to break laws. Todd is questioning on "how", not on why. I know of a great number of reason to jam an RF signal, each being as important as the existance of communication itself. I will not trouble myself with the burden of convincing, or supplying explanations. Lets assume inocense and work from there. Besides, where is all the hoop-la contradicting FM and Police Radar jamming? How many traffic laws the dammers here adhere to? Cable stealing, product modifying hipocrates are inumerable, so raise your hands just for the hell of it!

>I understand you are saying that a cell phone won't work with no
>received signal but a PD walkie-talkie will??

When you push the button on a walkie-talkie, it transmits. Period.
It can't even be looking for a received signal at that time. If
there's an emergency (say a gas explosion right under [or in] a
restaurant), a cop will call for help, even if the jamming device is
preventing him from hearing anything.

Stan-

Just after turning it on (immediately when the "Welcome" message appears)
hit "3." That'll give you the version-it'll say version 1.0 most likely.
Then join the Yahoo "Pro 93" group--go to the documents section and you'll
find a file listing all of the (minor) bugs. Most are totally
inconsequential, but some "power users" are in a bit of a snit over the
so-called "alpha tag" that repeats tags on two banks. You can read a lot
more than you will ever want to know about it in the group. Frankly, I have
version 1.0 and wouldn't even be bothered exchanging it if I had the chance.
It is simply not that big a deal to me personally given the fact that this
is ONE FANTASTIC SCANNER (and none of the "issues" affect it's primary
function). To each his own.

Stan, from what I understand PA needs a minimum of 250 towers in place, presently they only have 125 .

I hear that some of the metro areas in the eastern part of PA are up and running and as expected are having problems.

Almost forgot, Erie area is supposed to be up also. That makes sense, Ridge was from Erie.

It would not disappoint me if this new statewide system wasn't totally up and running in the next three years. They are going to have continual problems with 800 MHz in PA with all of the mountains and hills. As you may know, 800 is line of sight communications when at it's best. Around the country Motorola keeps pushing a system in areas that it will not work effectively. Pittsburgh is a very good example, police and fire went back to UHF (400 MHz) and the garbage collection crews are the ones on the 800 MHz system from what I hear.

>consisted of a CD-Rom and the cable (DB-9 on one end and a 1/8" stereo mini
[snip]

A lot of people have been mistakenly sold that package.

The cable/software Radio Shack sells for the PRO-92 is available
on-line at:

http://www.radioshack.com/product.asp?catalog_name=CTLG&product_id=940-1223

It's $70, and the software won't do you any good with the 93.

For a rundown on cables for the 92 or 93 (same cable) visit:

http://www.pro-92.com/pcifcable.htm

If you're going to buy a cable, the one from Purple Computing is very
good.

For excellent free software for the 93 visit:

http://www.starrsoft.com/freeware/Win93/index.html

There is a bunch of discussion on cables and software at the Yahoo!
pro-93 group. But Win93 and the Purple cable are the quick answer.

and indication of the problem is the cell phone service in PA....you
often cant get a signal at the philly airport, or on the PA turnpike.
large areas of PA are virtually inaccessible by radio without a
facility in the immediate area. besides, PA state govt is very, very
backwards..

"This difference between liberalism and conservatism
must not be obscured by the fact that in the United
States it is still possible to defend individual
liberty by defending long-established institutions.
To the liberal they are valuable not mainly because
they are long established or because they are
American but because they correspond to the
ideals which he cherishes."

CIA puzzled by Olympic radio messages
02/12/2002

Salt Lake City (dpa) - The CIA must feel puzzled by some strange communications after revelations on Tuesday that coaches and other training staff used their frequencies for radio messages at several Olympic venues.

Citing unnamed sources, the German National Olympic Committee said that there were some serious radio disturbances during the first days of Olympic competition. The NOC said that the frequencies had not been co-ordinated before the Games.

The NOC said that the U.S. Central Intelligence Agency (CIA) ``could not make a lot of sense of the instructions for obvious reasons''.

Radio messages are mainly used at alpine and cross-country ski events as well as the biathlon where the coaches are spread all over the course.

The CIA cannot have been happy with the incidents as the Olympics are the scene of unprecedented security measures in the wake of the September 11 terrorist attacks in the U.S.

Hi,

I'm a programmer so I see everything from the programmer point of view.
Here is the problem, if my 780 can receive digital signals but is doesn't know how to decode those signals, maybe we can get them in
some ways inside in our computers and decode them using software?
if there is a way to get those signals inside my computer, and if we can find the algorithm they use to code/decode those signals...
then the problem is solved...
I am right or I am wrong?

I didn't have time to read the zillion replies so I hope i'm not being redundant. Most people on the cellular NGs will take offense at your request , take that into consideration.
The Israelis make and sell tri-band jammers. They are commonly available in the waterfront markets in NYC or S.F. ..! Like the (also commonly found) 15 watt cordless phones , cb amplifiers , active radar / laser jammers , and other " non type approved " electronics sales they aren't supposed to be available ..but are VERY common. IN NYC , restaurants, churches and many other places use jammers regularly to control the rude and disrespectful phone users.
They are illegal ..they irritate people on the cellular NGs (they take away the " power " they feel about pocket phones) .. but they are all over the place ..in many large metro areas. They are pretty kewl because most people NEVER get they are being actively jammed. Lots of the NG users have had them used on them and didn't have a clue.

Doesn't Rat Shack sell the discone without the top loading coil and whip? At least that's how they did it a few years back, as far as I can remember. That cuts out the low end frequencies.

I've had a Diamond D-130J since 1972 (I bought it from the Heathkit store in downtown L.A.), and it's been up at about 40 feet for all of that time, at 3 different QTHs. It's down right now because I recently re-roofed. It's still immaculate, but the black plastic loading coil has discolored. The label finally fell off (but it left an image of same in the aluminum underneath, and I can still read it clearly). No corrosion. It's been through 50 to 70mph Santa Ana winds that rip trees out and bend masts. No damage. Even the rubber rod tips are in great shape. I'm so happy with that antenna that I just bought a second one from AES in Las Vegas for about $89, and the pair will soon be up again, hopefully for another 30 years. For what it's worth, I hope that this helps.

Dewayne, I ordered mine just a couple of days before you said on the newsgroups that you ordered yours from Burghardts as well. Mine is 4021 and there is NO FCC sticker that says, "It is illegal to modify this radio balh blah blah."

Hmmmm.....

I thought I read somehwere concerning the stickers and the Q7a mod. ... You made me VERY curious and found that my mainboard rev is B-5146C

Does that help anyone any?

My case,box and manual were OBVIOUS new. I have NOT had the same power problems that you have.

I use a 2066 in my mobile, and had some problem with VHF pager interference, but eliminated it with a PAR Electronics notch filter. Not the cheapest solution (though certainly not the most expensive, by a long shot!), but, IMHO, well worth the price. I've been using PAR filters for 6-8 years now, at least, and have always been satisfied with their performance and quality. Here is their website: http://parelectronics.com/index.html They are also available from various dealers, such as Grove, A.E.S., etc. There are some tunable units on the market, but performance is likely to be lower, and the tuning could change. PAR filters are tuned to exact frequencies and sealed to prevent drifting. No, I don't work for PAR, nor do I get a kickback. I've had occasion to deal with the owner on various things over the years, and he has always been friendly and helpful.

>decode a APCO-25 digital transmission. Uniden

that is why if we make a software application to do just that maybe we can listen the decoded transmission in the computer's
speakers. my question is "how to get the coded signal inside in the computer?" maybe is as easy as connecting the *speaker out* from
the scanner to the *line in* of the computer and then decode the signal?

And most 800MHz systems, at least around here, are trunked.

The only non-trunked 800MHz systems I can think of off the top of my
head are DART and Park Cities. All of Plano, Denton, Richardson,
Carrolton, Lewisville, Frisco, and their associated county offices are
on various trunked systems.

Thanks Ken, I have decided to return the scanner. That really sucks that the charge $70 for a cable. In some browsing last night I found a design for a cable that you can make. I'm confident that this is with in my capabilities to manufacture.

Its a bummer, I have been looking at buying a scanner for some time now. My PRO-2021 looks like it came out of the box but as you may know it only scans into the 400MHz range. With the PRO-93 on sale ($80 bucks off) it offered the features I wanted for a price I could handle. BUT, even at $169 I really don't like buying a product that is defective (my opinion). Its not that I think any less of the scanner, I'm really bummed out that the unit has buggy firmware. However, what little money I have to spend on myself these days, I want something that does what its supposed to. I've waited this long, I can wait till I can find a PRO-93 with the newer firmware.

Thanks again, Stan

Sorry Stan, I don't know what he got that scanner for, but it's not for the PSP system. In fact, I wouldn't expect that he would need a scanner to hear his own system since he'll no doubt have a radio on the system. It's probably to monitor other systems. In any case, Pennsylvania is going to a M/A Comm (formerly Ericsson) "Open Sky" digital 800 trunk. It's also supposed to be open to other agencies that want to buy the equipment. It's a non APCO 25, proprietary system. There has been a fair amount of discussion about it on various scanner related lists.

Thanks to all for the great feedback. Looks like the difference is in durability rather than performance, which is what I suspected. The RS discone does come with the loading coil and vertical whip tunable for transmitting on the 6m band, which is one of the reasons I was looking at it.

Are you sure thats 100% correct?

If the code/app is not being sold, then what specifically is being violated? Decryption software is not being proposed here. Aren't the taxpayers paying for the damn system?

The Trunker and Etrunker applications decode the Motorola and GE EDACS trunking control channel respectively and I'm quite sure they didn't pay or get permission from Motorola/GE http://www.trunkedradio.net/digital.htm . I believe the key is that the code is not being sold! (I understand that the control channel is different from the voice channels.)

Avraam,

There are two common methods of getting 'the digital signal into the computer' (that I know of)

1. connecting the audio output of the scanner into a sound card
2. tapping the FM discriminator output on the receiver, connecting it to a 'Data Slicer' FSK circuit, which then toggles the RS232's CTS line rapidly. Software then decodes the bitstream being transmitted via the CTS line (on and off).

The 2nd method is generally preferred, as it provide a clean unamplified, unfiltered baseband digital signal for software to interpret. In many cases, Method #1 is unfeasible as the receivers AF (audio) stages filter/amplify the signals for listening to voice. With many digital modes, this process distorts/damages the baseband signal beyond what software can recover from.

www.trunkedradio.net has an excellent page about APCO25/ASTRO with a wealth of information and links for you to consume.
http://www.trunkedradio.net/trunked/apco25.htm

There's also a very interesting USENET post that was posted several years ago about a college student discussing at length how he would use PC hardware and software to decode the ASTRO digital audio. I've been looking for the post via Google/AltaVista, but its been awhile. If I find it, I'll send it.

Here's some other resources that you may want to check out. They don't address APCO25 per se, but they all deal with decoding digital data that has been transmitted over RF.

Info on Method #2:
Digital Signals Decoding Interfaces
http://www.trunkedradio.net/digital/interface.htm
Trunker / Etrunker Information and Downloads

Indoor antenna. All the channels except the really high UHF
ones. The first few times this happened, I thought it was
the TV, so I turned it off, figuring it might be a thermal
problem, and when I turned it back on a few minutes later,
the interference was gone. After a few times of doing this,
I thought, "Well, I'll just listen to the radio," and the
same interference was on the FM band! So I did a little
experiment - one of the times that the interference popped
up, I turned on the radio and TV simultaneously; they both
had the interference, and when it stopped on the TV, it
also stopped on the radio. It's not being generated by the
TV, as it was on the radio even with the TV off.

If this interference was shielded against, I wouldn't be able
to get any reception at all! Cable is available in my neighborhood,
and would probably protect against the noise, but I'm on a really
tight budget these days - I'm so poor I can't even pay attention.

Just curious if you've made actual insertion loss measurements on these adapters. My experience is that decent adapters have virtually no loss (typically 0.1 dB) below about 1GHz. What do you consider "very lossy?"

The old "one piece of coax from the antenna to the radio" advice doesn't really make sense as long as all connectors are properly installed and weather-proofed.

Taking a moment from the Fredricks catalog, Email to above or see post sig for address! <KXDPHYAXUJTB@spammotel.com> spake thusly

>This is a ComNet/MA-Com/Tyco Open(Closed)Sky system

Yes, and if you're a news hound like some of us (instead of just a scanner hound), you'd know that Tyco is in DEEP doodoo now, because they also use Arthur Anderson for their accounting (like Enron did), and they're having other problems, and may not be around much longer.

Which would be bad for some people, but a real benefit for others.

If you want a discone that more durable than the RS but cheaper than
the Diamond, you may want to check this out:

Voice/speech Frequency Inversion

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

You can find a FA-126 (Casio Boss programming cable which works with the Pro-93) from ebay using buy it now and WITH shipping for $10.00

Its a two way cable with serial AND parallel. I never used the parallel so I dont know and am not sure it will work with Win93 even.

... this in response to several emails I got on this post. Guess that the Miami beach area (south shore , coconut grove ??) is the cellular jammer capitol of the world ... this according to several replies. (easy to buy in that area too)

Also ...guess another interesting use (and they are supposedly heavily used for this) is at giant L.A. , Texas , and N.J. swapmeets. Guess there are so many people at these events that the vendors have a hard time accessing the cellbands to verify their credit card purchases. They station jammers at the nearby celltowers and use CB to talk to the jammer operators to tell them to stop to allow the vendor/s use the tower for a minute. h ah ha ha ah a Pretty wild ..never thought of that one ....!!

There is probably more of this kinda stuff , all over the place ...

Hi,

Has anyone heard of a scanner manufacturer other than Uniden that incorporates trunk tracking/scanning into their receivers? Trunking is very popular in my area and a scanner without it is not nearly as useful. I can't understand why companies like Icom have not got into this. I sent a message to Icom America asking if they were close to producing a scanner with this capability and the response I got was "probably."

Any rumors floating around?

Thanks

Darryl

Al,

Just ideas being exchanged, nothing physical like a mixer with 45 MHz.
I did jam my own phone with this simple setup one time to prove the
concept to a friend. He thought that you needed lots of power and a
wideband noise. Kids, do not put a mixer and a 45 MHz local oscillator
near a AMPS cell site, you could jam the entire cell site!!!

Better to feed the "full fidelity buffered" signal from the data slicer output into the computer.
The speaker out is attenuated and filtered such that you might experience unsatisfactory results.

That would be as bad as an 8.xxx oscillator mounted on the wall right
near the antenna of a certain repeater, as was done about <mumble>
years ago in New Jersey.

I have a bottle in the closet. I can't remember exactly what all it says on it but, its about a 4oz spray bottle with DEET written in big brown lettering I think. It is 100% DEET. I came across it when I was about 14. I used it one time and it melted the soles on my boots. That is why it is in the closet. I kept it around just as a conversation piece. Then I moved and haven't seen it in a year or so.

I am no expert but I don't think I microwave oven would do that. Personally sounds like a 10 or 11 meter rig with the TVI circuit disabled. So it owner can see those useless watts on a meter.

Look up the Digital Millenuim Copyright Act and Patent laws. It doesn't matter if you give it away for free. Open Source Software and hardware makers the world over are being impacted by this law. Currently it is illegal to import serial cables for some computer devices without a license. See today's Slashdot.org article on Sega stopping serial cables that work on their machines from entering the USA.
Besides you can't just make a data slicer and decode TDMA with a sound card, you need hardware to accomplish this. Uniden has paid about $200,000 just for the licensing fee to develop the vocoder for their scanners. You could develop software if the organization gives you a waiver, but you need to apply for one. MIT owns some of the patents on APCO-25.

Openness.org has campaigned for six years to raise the issue of open versus closed public safety radio systems. Almost since public safety departments began switching to trunked and then digital systems en'masse, Openness.org has been the place for free media advocates and scannists to vent, compare notes, and illicit positive action for change and preservation.

To help make the point, an online database of open examples highlighting the scores of open systems is available. The database points to online audio streams, webcams, policy pages, online CADs, and more. Scannists, journalists, and others may find the site collection invaluable. You are encouraged to use the system as-is and to contribute new information.

Visit http://www.openness.org for more information.

Cordially!

Dave

If you had a PRO-92, that $70 package is IMHO a fair deal. Half for
the cable, half for the software, each part is in the ballpark.

If the plans you found were for the two-transistor cable, that's
fairly easy to build. Should be easy easy if you don't insist on
getting everything inside the DB9 shell. :-)

[snip]

The sale is through March 2nd or 3rd, and (from posts on the Yahoo
group) people have been finding the updated version. Depens on how
much you enjoy scavenger hunts. :-)

DeWyane:
I got mine basically the same time you got yours. I tried some tests with just WFM on a local FM station. I fully charged the 2xAA (NiCad) at 700 mAh and they lasted 5.5 hrs. Is this normal? My radio Serial is 04021 and it was purchased the same time as yours... I am going to send Burghardts an email as well. Seems short for 2xAAs.

I will try some new RS 1600mAh tonight.

This area in Central Penna. Dosen't have any 800mhz traffic at all. So I have no idea why the seperate receiver in his office but the Comm room is a ways away from his office.
Radio shack has the freq book with 800 mhz freq's for NJ and Penna the last few years.
All I will say is that I am from a Barracks A area. There are only designators of "A", "B" and "C" for barracks. The said Captain may be useing it to listen in to other traffic such as local and regional TX's
Who knows?

406-420 MHZ or 163-172 MHz. The only thing you will hear are boring opening and close the prisoner cells talk. Once in a while an escape may occur, but that is very rare.

A simple 1/4-wave groundplane cut for the center of that range (~140 MHz)
would do an OK job. That would consist of a 20-inch vertcal element and four
20-inch horizontal (or downward sloping) radials.

It could be cheaply constructed from an SO-239 chassis mount connector and
some stiff copper wire.

2663. AR8200 Flexible Antenna

Newsgroup: rec.radio.scanner
Date: 2002-02-15 18:48:16 UTC
From: uid0-41441-bla@catastrophe.net
Message-ID: <71f23384.0202151048.60a32f7@posting.google.com>
Source record: 52132

My AR8200 is a great piece of hardware. Most of my scanning is geared towards "in the field" work where people might get nervous of seeing a scanner. With this problem, I'm required to throw an earphone on a scan more covertly.

I like the whip antenna that came with the 8200, but is there a better flexible antenna? I mainly ask as I don't want to run the risk of bending the whip antenna.

Thanks

Hi De Wayne
Take the radio back to where you bought it from, tell them you want a
replacement. If they try and blame Icom, Point out to them that you bought
the R2 from THEM not Icom. Under the Law, the seller is responsible for the
radio.
They MUST replace the radio, it is upto THEM to contact Icom, not you.
If they still piss you about, tell them that it is against the law to trade
or sell goods that do not meet the standards to which they are intended,
i.e.. if your radio has a fault and you only just bought it, then they are
selling defective goods and that is unlawful
You are well within your rights as a consumer to DEMAND either a replacement
or full refund.
I would contact your Consumer protection dept, the number should be
available at your local library or the telephone company will have it.

I wonder if DEET is oil-soluble or water-soluble. In either case,
it's an absolutely awesome mosquito repellent. I was visiting a
friend one time in Minnesota, whose back yard was right next
to the woods, and you could literally see clouds of mosquitoes.
This guy had some greasy cream that he'd got at the surplus
store, which I guess was the type used in the jungles of
Vietnam. He also had a couple of those candles, and "mosquito
coils," which seemed to have no effect at all.

Why did you apply it to the soles of your boots?

Nah - you could turn your restaurant into a Faraday cage,
and there's nothing illegal about that at all. It's
transmitting jamming signals that's probably illegal. :-)
(The shielding merely "obstructs" the signal. The
"willful interference" is when you send a signal over
the top of theirs.)

Interestingly in Europe they never do this. Although all civil freqs start
with a 1 and can therefore be dropped, it appears that only the North
Americans do. Listen to BA flights coming into your city and they will read
back the full frequency.

It depends on how you jam them. Not all forms of signal denial would be
classed as illegal.

Personally, people - I think this is all BULLSHIT - and I'll tell you why: If these radio waves are entering MY space and going through MY body - then I should be able to do with them as I please. Is this not a violation of property? I didn't give anyone permission to shoot THOUSANDS, possibly even HUNDREDS of THOUSANDS of RF energy through my body - and I can't control the direction of radio waves (unless I build a home out of lead) and when I drive to the store, walk in the park, sit down to go fishing - whatever - there are a MAGNITUDE of unseen forces penetrating the air and the environment we live in. Studies are INCONCLUSIVE as to the harmful effects of RF radiation on the human body - look at cell phones specifically - first they are released as being "safe" then there are reports out 8~10 years later that exposure to radiation from close-range use of cell phones COULD cause brain damage. Apparently the parties responsible for doing the research were early pioneers of close-range radiation. Personally, my feelings on this are simple - if you are going to pass radiation through my body - whether directed, intentional or not - I should be able to monitor what effects my person. That being said - let's talk about realistic directions... I'm not condoning the monitoring frequencies for the intent of illegal practices. But if public transmissions ARE PRESENTin MY AIRSPACE - I feel we have a right to know what they are. I consider any UNSCRAMBLED radio waves to be PUBLIC. If you want privacy - use another medium or SCRAMBLE / ENCODE your transmission. In this type of approach, we retain the right to listen - but not the right to decipher.

And yes, I am an avid scanner buff - I'm not here to make a stink about leaglity issues - more like along the lines of MORALITY issues. The FCC doesn't want us to be able to monitor CELL frequencies - but they will charter some cellular company rights to put a cell tower in your backyard and irradiate your immediate airspace with varying amounts of RF.

So do we have the right?

-Dirk

I have been retired for a while, and although I am still an avid listener (Just can't get over that need to know what is happening in my airspace!), I can't really comment on the current state.

However, I cannot recall this being a common practice in U.S. or Canadian ATC units I have worked in or visited. Some, mostly smaller, airlines have shown a tendency to drop the leading one but it is not a common practice.

While operating in European airspace I cannot say I noticed it either, but that was quite some years ago.

Certainly I don't notice it being used by controllers or pilots on frequencies used by Boston, Cleveland, Toronto, Montreal, Moncton or Gander ACC's. And having flown the flight deck from coast to coast a copule of times in the last 3 years I have never noticed it from any ATC unit, Centre, Terminal, Tower or Ground; or even any aircrew.

Not to say it doesn't happen, but I know it would have been brought to my attention if I had done it, along with a statement to the effect that if I didn't take my job seriously maybe I should look for another line of work. ATC folks are not exactly renowned for their tact.

I don't wish to drag this discussion on, but thought I'd share my
experience. I have an ICOM R2, purchased it from www.kjielectronics.com
about a year ago. I've used regular alkaline AA's from and start and have
no negative report - in fact, I've been impressed at how long the batteries
have lasted. Lately, I've been using Panasonic 1600 mAh NI-MH batteries,
and these have been superb!

Also, I have beep turned off and the background lighting turned of in the R2
setup - figuring that beeps and lighting take away from the batteries.

In the entire building, from INSIDE the building. Which would
probably require much more than 200 mW (depending on the particular
building).

It's called CYA and wilful blindness. They don't want any
transmissions from inside the building that they aren't aware of, but
they'll put up with signals from unknown transmitters if those signals
are helping them. (My club used to be the "telephone system of last
resort" for the hospital that hosted the club repeater whenever the
phone system was undergoing repair - which was quite often at one
time.)

Ok, here's the deal. I'll try to keep this short but sweet. Where I live, with MY 93 file in my unit, I can only once in a while pick up traffic from a TRS (trunked radio system) in the next county to mine. Once in a while I can, usually I can't. I do get the data channels loud and clear, but I always figured I never got much traffic because no one opened up the repeaters in my area to allow traffic through them. IE: no units would come into my county enough to "drag" their TG,s with them, thus opening up my local repeaters so they can stay in contact with their little cop buddies.

Yet when I load in a 93 file from someone 3 counties south, I hear it all (everything between me and him, or what I can't hear with my file). Now, I have all the same data channels and settings, I copied them verbatim to my file to do a test with my file, as to why it only worked once in a while, and no difference.

So in a nutshell, my file is EXACTLY the same as his, the ATT is off, scan direction is the same, order is the same no typos, it's all identical, except the actual name of the file. What would cause one file to pick up traffic, when another identical file will not?????

Hi fella's

Do any of you know if there is a car stereo/scanner combo unit in existence? I have never seen or heard of one myself but it sure would save a lot of grief for me if I could find one. It might be a tall order to jam a great stereo (Alpine) and a pro 2006 grade scanner in the same box but I thought I'd ask anyway. Ya just never know. :-)

Thanks Mike Burch K8MB

I often hear all sorts of things on the scanner.
I always travel with TWO scanners..... on I-10, I've heard the CHP (California Highway Patrol) talk about a medical emergency. On the other radio, I monitored the local EMAS frequencies. I found out where on I-10 the incident was so I could plan accordingly and also what happened......

I also have heard chases, as well as stake outs and surveillance. If I am waiting for dinner at a restaurant, I often take a scanner and ear piece with me.. never know what I might hear....
of course If it's something that may make the news, I can share that information.. but if it's sensitive I don't

I was on my way to the gym and was passed on the left by a speeding car....then on the right by a police car..... I took the scanner with me to the gym and learned that the suspect
who nearly hit me was fleeing from a robbery.. I was stopped at a red light.. the speeding suspect crossed over into the opposing lanes to get around the slow traffic......

of course, I have heard aircraft incidents too.... sometimes airline flight crews have interesting problems..... then there are the ground crews who don't know which way is up
(one Airline in particular that has White planes)......

Are the p93 files identical? If you do a fc /b on them, does it come
up "no differences"?

If not, I can think of a couple of people who'd be interested in
seeing the files. ;-)

I have been keeping up on this subject and understand your
concerns. FRS radios are extremely dangerous for small
children (under 15) because unwanted strangers can locate
your home with a device called an "s-meter" which reads
the signal strength. This allows the listener to "zoom in"
on where the child lives. In the past year FRS radio use was
responsible for the majority of child-adults meetings/molestations
and associated problems. In our tri state area here is the list:

Number of children contacted and engaging in sexual conduct: 372

Contact means:

57% - FRS radios
27% - Internet (newsgroups, chatrooms, email, etc.)
11% - Approached in public (playgrounds, malls, streets)
03% - Introduced by another child to offender.
03% - Unknown or not listed

Don't allow your children to use FRS radios. And be careful
or avoid net use by your children. Find a good book or
allow them to watch the Disney Channel.

Please be careful.

2711. Re: Icom R2 Problem

Newsgroup: rec.radio.scanner
Date: 2002-02-16 09:15:06 UTC
From: proma1 <proma1@ntlworld.com>
Message-ID: <Lopb8.60016$as2.10169510@news6-win.server.ntlworld.com>
Source record: 52079
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,alt.radio.scanner,alt.radio.scanner.uk

for some strange reason both Icom and Yaesu seem to supply some of there scanners with the background light already on,and this wastes the batteries big time and could be the cause of the problem.

the people i work for,disable the backlight before sale,also on the R2 its set up from factory for resuming scan after 5 seconds regardless of whether transmission has finished,both these standard set ups probably account for a good percentage of extra work in convincing the R2 is a good set.

Why on earth do they supply them like that????

anyway as for having to replace the set,depends on the country,all people on this group are not from UK,and i think the original question was not from the UK,but also i have never seen anything in a warranty that allows a replacement for batteries going down quicker than expected,wher in the manual does it say how long the batteries should last for???.

Manufacturers can change specs on equipment and that can include battery consumption.

Nice they have replaced it though,and in my opinion they should if youn are not happy,but in law there are so many loopholes,i know from experiance.

i buy things from P* W**LD and D**ONS in the UK and they wrote the book on get outs,the reason i still buy is because they are in every town and easy to purchase from,but when you have a problem they come up with differant rules every time,i phone trading standards and so far they have always been legally correct.

My fault for buying from them,fool.

i know i have gone slightly off topic so i will leave it there.

Hello,

I'm using an BC780 to track the local police EDACS network, and an old scanner (Pro-2022) with discriminator-output and HamCom modem to decode the control channel with the programm etrunker.

No I was wondering, instead of making an RF-tap on the discriminator, wouldn't it be possible to make a data-tap in the 780? The 780 itself decodes the control-channel and decodes that information to track the network. Is the required data (equivalent to the slicer-data) produced inside of an IC or processor, or can it be tapped at some point and transported to the computer's comport so that etrunker can decode this data???

Bye, Peter Hunt.

Hello!

I downloaded this amazing program this morning ant it works great!

Im having one problem though that I thought you might be able to help with. When ever I try to edit the frequency directory or ID directory I get an error that says:

RUN TIME ERROR 372

Failed to load control 'MSFlexGrid' from MSFLEXGRID.OCX

It says my version of what ever this is is outdated and a newer one should have been provided with the software.

Any ideas?

Thanks

Emergency Situation Report e-mail list for Pennsylvanians

PA-SitRep is a free, 100% non-commercial,
nonprofit, e-mail list and web site.

The PA-SitRep emergency traffic e-mail list is a
tool that will enable you to monitor and report on
major emergency situations throughout the State
of Pennsylvania including weather emergencies,
natural disasters, environmental disasters, civil
disturbances and threats of terrorism, major fires,
manhunts, and Amateur Radio Emergency Net
activations.

Subscribers are encouraged to utilize their home,
work and cell phone e-mail addresses for receiving
messages from the PA-SitRep e-mail list.
Subscribers are also encouraged to post major
emergency situation reports that directly relate to
Pennsylvania, but posts must consist of confirmed
and accurate information.

Message volume on PA-SitRep is EXTREMELY
low and users may subscribe and unsubscribe
at any time.

PA-SitRep is also building a list of PA-SitRep
Contacts, many of whom are Amateur Radio
Operators with HF capabilities.

Please visit the site to learn more about the
PA-SitRep mail list and volunteering as a
PA-SitRep Contact:

http://www.pa-sitrep.com/pasitrep.htm

Thanks. We'll look forward to your participation.

Actually I find it pretty normal. We refer to them in the ways they are
most often labelled. Nearly everyone I know calls 144-148 MHz by it's
wavelength as with 50-54 MHz. But .70 cm is most often referred to, at
least hearabouts, by it's frequency. So it seems perfectly normal to
me.

It's a nice scanner for my purpose. I bought one a few months ago when RS had them on sale at a considerable discount. They now show them at $249.00 on their web site but also list them as unavailable.
I like the fact that you can scan trunked and untrunked freq's at the same time and it seems quite sensitive.

Whoa! That sounds difficult to believe. I'd like to see some references
too.

I'm no parent, (yet ;) but I work with kids frequently in my volunteer
work (I'm on the board of directors at a local summer camp). So I take
abuse concerns to heart. I would caution kids to be careful with FRS, for
sure, but I don't think it's nearly the risk you make it out to be.

> Number of children contacted and engaging in sexual conduct: 372

> Contact means:

> 03% - Introduced by another child to offender.
> 03% - Unknown or not listed

OK, you've defined contact. Now define "engaging in sexual conduct". The
predator actually, physically meets the kid? Kidnap? Abuse?
Harrassment? Maybe they talked dirty over the radio or in the chat room?

Are the numbers you cite just a subset of total abuse cases? Where's the
percentage of "contact" cases where the child already knew the attacker?
That alone is probably 90% of abuse cases that you've discounted, so this
57% claim is probably more like 57% of 5% of some non-specific group.
Statistics can say anything you want them to say.

I'm no expert on radios and I don't know what an "S-meter" is, though with
my engineering background I can guess. I can't see it being much of a
risk. You'd have to keep the child talking for quite a while in order to
pinpoint their location, and even then, it puts you in no better position
than if you had simply wandered around, stalking prey at random. So what
if an FRS conversation tells you that there's a 10-year-old girl living at
35 Spruce Lane? Couldn't you have figured that out by sitting in a car
and watching where the school bus drops her off, or watch her play in the

summer?

The vast majority of assault and abuse cases I read about in the paper are cases in which the assailant was a friend of the victim -- a priest, a babysitter, a hockey coach. You very rarely hear about complete strangers picking off a kid at random to target. I'm not saying it doesn't happen, but I don't think it happens nearly as much as you claim, and even when it does, I highly doubt your claim that FRS is frequently involved.

Besides, a predator using FRS would be putting themselves at serious risk by allowing anyone within 2 miles to eavesdrop and figure out exactly what they were trying to do. How do they know the local police or neighborhood watch aren't listening right in?

Dirk, there can be no legal argument that justifies criminalizing a person intercepting anything on their own property, and the format that it was transmitted in (clear or secure) has no bearing on that. Only a criminal government whose aim is to destroy the Constitution in the so-called name of socialist desires for "privacy" could attempt such an act. Disobediance of illegal acts is a duty, much much more than a right. It was your priviledge to be born free, it is your duty to die free.

Very interesting. Please tell us what an s-meter is. I'd be interested in the names of any manufacturers, too, so I can read their specs and see if s-meters can _do_ what you claim.

>SNIP<

> In the past year FRS radio use was
> responsible for the majority of child-adults meetings/molestations
> and associated problems.

Child-adult meetings is when you meet your own child, right? "Honey, come home right now." "Aww, Mom. Alright." So they come home and you meet them. Your terms are meaningless. And what are the "associated problems" that you refer to. And please provide the resource for your statement.

> In our tri state area here is the list:

Where is your tri state area and who compiled the list. Kindly provide a citation so that I can see the resource for myself.

>SNIP<
> Don't allow your children to use FRS radios. And be careful
> or avoid net use by your children. Find a good book or
> allow them to watch the Disney Channel.

Yeah, right. I thought all the fundamentalist Christians had decided Disney was run by perverts. I think you need to boycott the Disney Channel. And all those Harry Potter books are about <gasp> witchcraft. Don't let your children read _them_. Maybe you have a list of acceptable books -- woops -- you let your children watch the Disney Channel, so I can't trust your judgment.

>
> Please be careful.

With people like you, care should be taken.

By the way, for the rest of you, take a look at
http://www.landoverbaptist.org/news0899/jar.html
which is a spoof of people like Stephanie (it's really a spoof).

Then see
http://zapatopi.net/
for Aluminum Foil Deflector Beanies to protect yourself and your family
from mindcontrol, and
http://www.noah.org/trepan/trepan_clinic/trepan_clinic_why.html
for an explanation of why _you_ should stop putting off brain surgery and
have your cranium ventilated -- not unsightly scars or stitches. (No
appointment necessary.)

Have fun, Steph.

Troll BS.

An S-meter is not an effective way to track FM signals and with the proliferation
of FRS radios I don't think Chester the Molester is going to broadcast in the
open for every one to hear!!! This survey looks like BS and facts without
data is just opinions and yours stink!!! Carrying around a communication device
usually wards off most attackers.

Troll BS.

Hello,
Just wondering if anyone lives kind of near me? I live in Mundelein, IL which is in Lake County? Kinda close to Six Flags Great America. I have been a Ham for over 10 years and been scanning the airwaves alot longer. However, just been getting into truncking and all that is still a novice. I would like to find someone in the area who can teach me all the basics about Trunking and more.

Ommm if your in the area please email me and we can hookup.

Hope to hear from someone around here soon.

Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have a Pro 93 radio scanner. I'm able to use WIN93 to download data to the scanner, but this software does not allow editing of the Startup Welcome Message.

ScanPro92 has the ability to edit the start up message but I can't get it to work properly. Before I waste more time trying to get the software working, I'd like to know if ScanPro92 will program a Pro 93?

If ScanPro92 *will* work with a Pro 93 (for changing the welcome msg) then I need other help:

When I change the welcome msg and attempt to save the SPG File, I get this error msg:

"No SPG file was created. You may have entered invalaid information into the data fields. The previous .spg was backed up but the current data cannot be downloaded until the ASC data is corrected."

After getting this error message I have gone back and completely removed the data from the welcome message area and attempted to save the SPG file again. Unfortunately, I get the same error msg.

How can I find out what data is invalaid?

Any ideas?

Thanks,

Gordon J.

>software working, I'd like to know if ScanPro92 will program a Pro 93?

The 92 and 93 are different scanners. Software is not interchangable. Data formats and internal memory maps are different. The serial communication protocols are even different.

You'd think a professional outfit like GRE would standardize things, but they didn't.

I have setup the scanner on the NASCAR freqs and NASCAR Officials.
Right now (during the Bush class race) I'm broadcasting the NASCAR
Official frequencies. Tomorrow I will be broadcasting live
Driver/Crew comms.
Check it out at http://www.MilAirComms.com

Since I live 2 miles from the track I can pickup up all the Race
communications pretty well.

Good point Dave. Sorry, I didn't mean to be rude on the subject. I see computers as objects of viewing information and radios for listening. But I presume you can tell I am from the old school.

I am also from PA and have no particular interest in listening to public safety out of my area.

I have tuned in Cleveland, and a few others on occasion by just turning my 2 meter 19 element stacked beams around.

Have a wonderful day.

The best way to get trunking information is to go look on the web
site www.trunkedradio.net

Then go in the lower right and select the state you want. Next
go select the system your interested in. Most of the work has
been done for you.

Hello All,

Sort of off the commercial programming topic but.....

I am looking for the ICOM RS-R8500 Software. I just
did a harddrive upgrade and did not back up my original.
It was on a website but is no longer available there.

Already have the cable so I hate to have to re-buy the
ICOM Software as you have to buy both.

Thanks for any help,
Eddie

Cross-posted to: alt.radio.scanner,rec.radio.scanner

Ok, here's the deal. I'll try to keep this short but sweet. Where I live, with MY 93 file in my unit, I can only once in a while pick up traffic from a TRS (trunked radio system) in the next county to mine. Once in a while I can, usually I can't (in that county I hear it all, at home a few miles north not all the time). I do get the data channels loud and clear, but I always figured I never got much traffic because no one opened up the repeaters in my area to allow traffic through them. IE: no units would come into my county enough to "drag" their TG,s with them, thus opening up my local repeaters so they can stay in contact with their dispatch or whatever.

Yet when I load in a 93 file from someone 3 counties south, I hear it all (everything between me and him, or what I can't hear with my file). Now, I have all the same data channels and settings, I copied them verbatim to my file to do a test with my file, as to why it only worked once in a while, and no difference.

So in a nutshell, my file is EXACTLY the same as his, the ATT is the same (off), scan direction is the same, order is the same, no typos, it's all identical, except the actual name of the file. What would cause one file to pick up traffic, when another identical file will not????? It's like my 93 doesn't like the actual name of my file so it's not letting me hear the traffic..

Christ! Why not just put a leash on the kids if you have
to go through all that trouble?

Remember when kids used to be kids, and life was easy?

Why do parents worry so damned much? You actually sit there
and monitor when they aren't at home? Don't you trust your kids?

It's my understanding that a data slicer is merely a signal level
buffer for the discriminator output,
that is fed into the onboard processor for trunk tracking.
In the case of MDT decoding,
where the onboard processing capability isn't available,
this output has to be exported into a computer and the data slicer
output is already buffered for that purpose.

David,

They went on sale at 'Shack for $149 around the holidays. Be sure you get a Pro94 "A", as this revision allowed simultaneous trunk tracking and conventional scanning. I have one and like it very much. Very similar performance to my Uniden BC245XLT. I have added a Diamond RH77CA antenna. Only complaint is treble emphasis in the audio. The internal speaker is the culprit, since adding an external speaker cures this nicely. While portable, 'Shack's lapel speaker ($10) works great. I like to travel with the scanner and 1000 channels is terrific! Too bad no computer interface.

RESCUE RADIO: HAMS AID AT FALLBROOK CA. FIRE

Ham radio was on the scene as a wind-whipped fire raced through the remote north-western portion of Fallbrook California on Sunday February 10th. Sixteen homes were destroyed along with one sheriff's vehicle and two fire trucks. Among the houses that suffered damage was that of Grammy winner Rita Coolidge. An estimate 2600 acres were burned as this report is being prepared. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the details:

--
According to Bob Gonsett, W6VR, Amateur radio operators were more than ready when the emergency the emergency hit. And so was their local repeater system:

--
W6VR: “We have two repeater systems that are tied together on Red Mountain that serve Fallbrook and Fallbrook is fortunately a hotbed of Amateur Radio activity. Lots of logistics communications took place in support of Red Cross activities, animal evacuations, people evacuations and it was a very, very busy repeater system which, incidentally, is backed up by emergency power.”

--

Gonsett, who is editor of the CGC Communicator broadcast industry newsletter says that hams were posted at key points in the community. This included the fire department, the sheriffs department, the hospital and the evacuation centers. Some hams provided mobile communications for animal rescue operations. Others, who specialize in evacuation matters and health and welfare traffic worked in conjunction with the American Red Cross to provide support. W6VR says that it was just about a textbook ham radio communications effort for both people and equipment.

--
W6VR: “Their performance was outstanding in every respect. The repeaters worked flawlessly. There was no jamming. The greater community pulled together on this one.”
--

Volunteers came from across the region. Bill and Wayne Dewey, WD6AHW and WD6AHX, served as the Net Control operators. A father and son team, the Dewey’s spent hours directing all radio communications on the Fallbrook Amateur Radio Club's repeaters. Another ham volunteer was Jess Mauk, KD6YEI, of San Diego. He manned a RACES van sent in from San Diego County. In all close to thirty radio amateurs served in the first wave of volunteer communicators. Gonsett says that hams were there because they wanted to help:

--
W6VR: “It was really heartwarming to find such an outpouring of devotion from the ham community in people coming up here and making their presence known and contributing as they could. They were all useful and the community leaders thanked us repeatedly for our roles.”
--

Most communications took place over the Fallbrook Amateur Radio Club’s dual redundancy repeater system This is actually two separate machines designed and built by Chris Durso, AA4CD. One outputs on 146.175 MHz and the other on 445.600 MHz. Both carry the same audio. In time of emergency anyone with a scanner radio in the Fallbrook and Temecula California area can tune to either frequency and hear all of the ham radio communications.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

One last note. According to Gonsett, one of the luckiest hams on Earth has to be Joel Brown, KE6FHS. Brown is the president of the Fallbrook Amateur Radio Club. His home survived the wildfire. Sadly, his immediate neighbor’s' house burned to the ground. (ARNewsline(tm), W6VR)

**

RADIO LAW: COURT THROWS OUR PIRATE RADIO LICENSING BAN

Just because a person one operated a pirate radio station is not enough reason for the FCC to ban him from ever getting a broadcasting permit. So says a Washington D.C. Federal Appeals court. Amateur Radio Newsline’s Paul Courson, WA3VJB, reports from the nations capitol:

--

The government is not allowed to use your past as a bootleg radio operator to block you from holding a legitimate broadcast license, according to a ruling from a federal appeals court February 8th.

But any victory might be short-lived for onetime pirate operators wanting to turn legit.

The case out of Washington DC involved Greg Ruggiero, a onetime bootleg radio station operator around New York. He challenged an FCC rule that bans those found guilty of pirate broadcasting from ever holding a license, or being formally associated with the recently-created low-power radio station service, an industry that has become known as FM microbroadcasting.

The appeals court agreed with Ruggiero's claim such a ban is unconstitutional as the law is now written. But the court also left open the possibility Congress could write a more narrow law in line with the First and Fifth Amendments. Part of the argument centered on a protest philosophy held by many unauthorized microbroadcasters, who see their bootleg ops as civil disobedience.

The appeals court, siding with the former bootlegger, said there was some evidence Congress, in writing the ban into broadcast law, meant to punish those with a protest message, without really improving future compliance with the law. They called it viewpoint discrimination, and said ... not allowed.

Communications law experts are mixed whether the ruling has implications beyond FM low-power broadcast licensing, including whether FCC can use violations in one service to administer broader punishment.

Traditionally, the FCC has kept open the option of revoking other licenses held by a violator, beyond the service where the violation took place. For example, someone in violation on the ham bands might have his commercial radiotelephone license pulled as well.

In Washington, Paul Courson, WA3VJB, reporting for the Amateur Radio Newsline.

--

And what might this decision mean to Amateur Radio? Especially those cases where ham licenses are challenged based on character issues. According to retired ARRL President George Wilson, W4OYI, probably very little. George, who is also an attorney, says that despite the ruling, the FCC still has the authority on a case by case basis to deny a license to a pirate broadcaster. They can also still designate for hearing the license of any station who breaks the law or violates government rules. (Published news reports)

**

RADIO LAW: FOIA BECOMING MORE DIFFICULT

Hams fighting the FCC over enforcement and other issues are finding it a lot more difficult to obtain government records under the Freedom of Information Act. This is because of an administration policy change made a month after the September 11th terrorist attacks. That’s when Attorney General John Ashcroft directed all agency leaders to be more cautious in releasing records.

Over the years, some hams who have been tagged with violations by the FCC have tried to use the federal Freedom of Information Act to try to get a line on their accusers. Most of the time the government refuses unless the person making the request can show good reason for the information to be released.

While not of a national security nature, none the less, bureaus like the FCC will most likely be heading the words of Attorney General John Ashcroft who says that agencies must carefully consider things including the effectiveness of law enforcement before releasing any documents. Ashcroft says that agencies that legitimately turn down requests made under the Freedom of Information Act will have the backing of the Justice Department in doing so. (Published news reports)

ENFORCEMENT: LOS ANGELES AREA PAROLED RADIO OPERATOR RE-ASSERTED FOR PROBATION VIOLATION

A Bell California man on parole for jamming police communications is now being held without bail for violating his probation and allegedly making death threats on the 2 meter band. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details.

--
You may remember that back on November 14, 2001, the FCC set aside an Amateur Service license and the call sign KG6IRO that it had issued to one Jack Gerritson. That grant was made only a few days earlier on November 8th. The Commission took action after it received information that Gerritsen had been arrested in 1999 and convicted in 2000 for interference to the Los Angeles Police Department radio system.

Gerritsen was out on parole after serving one year of a five year prison term on that conviction. On January 29, Los Angeles FCC agents participated in the pre-dawn re-arrest of Gerritsen after authorities received complaints of death threats allegedly made by him on several Amateur frequencies.

As Gerritsen was on parole in the earlier case, a no-bail search and arrest warrant was served. This is because the terms of his probation banned him from possessing any kind of radio transmitting equipment.

But at the time he was taken into custody Gerritsen reportedly had over twenty radios at his premises. Of these the FCC says that eight were capable of operating on frequencies in the Amateur, Marine, Land Mobile and Public Safety bands. The FCC says that Gerritsen even had a Marine radio with batteries connected to it, and a length of antenna line running outside his residence hidden in a closet.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The FCC says that after they set aside Gerritsen license that he continued operating and causing deliberate interference to numerous Amateur radio repeaters in the Los Angeles area. It acted on these complaints. Now Gerritsen may spend the next four years in jail. (FCC release, other sources)

**

ENFORCEMENT: FCC ORDERS POWER COMPANY TO HELP A HAM

The FCC has told an Alabama power utility that it has to clear up interference it is causing to a local ham radio operator. Amateur Radio Newsline's David Black KB4KCH, has the latest from our South East Bureau in Birmingham:

--

For more than two and a half years, Dan Jeswald, W4NTI, says his ham radio communications have been hampered by a pesky problem: interference. Jeswald moved to Anniston, Alabama, in June, 1999. It wasn't long after that, he says, that he began experiencing interference on numerous high frequency bands. He says 6 meters became unusable because of popping sounds and other interference Jeswald says sometimes rates full scale on his equipment. He says the noise is worst during cold weather and sometimes goes on for days.

Jeswald suspected a faulty transformer or other power company equipment. He says he contacted Alabama Power. Jeswald says the power company responded and began working on the problem. But in midstream before the problems were eliminated, Jeswald says there was a change of people he dealt with at the power company. Jeswald says his efforts to get help with the problem since then
have gone nowhere.

With few options left, Jeswald contacted the ARRL, which put him in touch with the FCC. On January 30th, Special Counsel Riley Hollingsworth sent a letter to Alabama Power's Chief Executive Officer. In the letter, Hollingsworth advises the utility about Commission rules governing equipment that generates unintended interference. And he informs the company of its responsibility to fix the problem, or possibly face fines if a violation is found.

A call to the power company seeking comment was not returned. Meanwhile, Dan Jeswald just hopes the airwaves clear up--and soon.

From Birmingham, Alabama, David Black, KB4KCH, for the Amateur Radio Newsline.

--

Alabama Power was given thirty days to advise W4NTI as to what steps it was taking to solve the interference. (FCC release)

**

THE CHANGING OF THE GUARD: WAYNE WILLIAMS, K4MOB - S.K.

A radio amateur who dedicated almost a quarter of a century editing a ham radio magazine has crossed over to the other side of the Ethereal Abyss. This with word that Wayne Williams K4MOB, editor of the SouthEastern Repeater Association magazine "The SERA Repeater Journal" has passed away.

According to Gary Pearce, KN4AQ, Williams died at home early Tuesday morning, February 12th of complications from cancer. He was 65 years old.

Pearce says that Williams passion in Amateur Radio was FM and repeaters. He became active in SERA's predecessor, the Carolinas-Virginia Repeater Association, in the early 70's. This, at a time when two meter FM was just beginning to gain in popularity.

In 1977 Williams became the editor for the group's magazine, the Repeater Journal. The Journal was already a respectable size 44 page booklet, with regional advertising from local dealers and hamfests. But over the next 23 years, K4MOB built it into a quarterly magazine featuring full-color covers and both national and regional advertising.

--
Gary Pearce KN4AQ: “Through the Repeater Journal and through the coordination body Wayne helped to provide the infrastructure that we enjoy today on VHF and UHF FM. Repeaters that we can operate with a minimum of interference and maximum of range and quality of enjoyment.”
--

In parallel with his SERA activity, K4MOB also established Williams Radio. He started the business by amassing a huge inventory of crystals. In that pre-synthesizer era, two meter FM radios required a pair of crystals for each frequency used. Other crystal sources made hams wait days or weeks for delivery but Williams Radio was one of the few instant sources of crystals for almost every frequency, and for almost every radio. Later, the business added accessories and several lines of radios. It was a family affair, with Williams wife, brother and sons pitching in at hamfests across the region. K4MOB retired from Williams Radio in 1997.

Wayne Williams, K4MOB, is survived by his wife Gerry KB4SER, and two sons, Wayne Jr. and Chris. A third son, Greg, passed away in 2000. Pierce says that Wayne Williams was a very special man in ham radio. All that knew him say that he will be missed. (KN4AQ)

HAM RADIO IN SPACE: HAMS ASKED TO HELP NANOSAT PROJECT

Ham radio is being asked to provide technical support for an upcoming satellite project. Jeramy Boot, G4NJH, says it is a bird called Nanosat:

--

John Heath, G7HIA, the Secretary of the National Space Centre Amateur Radio Society, reports that Bristol University is asking the world-wide amateur radio community to assist with data capture from their forthcoming Nano Satellite Project.

Hand-launched from the Space Shuttle during a space walk, the 6.5-kilogram satellite will send data that can be decoded with software available free from their web site. The software is not yet written because the university wants to give amateurs the chance to have input into how they would like the data stream: 1200 baud AX25 packet, 9K6 packet, Bell 202, or Soundcard etc. More information and an on-line survey form is available on the web at www.handsat.co.uk

Jeramy Boot, G4NJH

--

If you missed that website address you can find it in the print edition of this weeks amateur Radio Newsline report. (GB2RS)

I just installed a Radio Shack Discone Antenna about a month ago and the antenna does pretty good for pulling in the reception. It"s on a 20 foot mast tied off at the side of my house. For the price I paid for it is good. My question is the same. What is the difference in both of them? Their design is the same. The construction, for the radials on the R/S you have to screw them into the apex assembly and tighten the nut. On the Diamond, there is holes on the apex assembly where you insert the radials and you tighten them down with a Allen Wrench. Maybe that's the difference. Which one out performs the other. Maybe your buying the name.

Portable radios for Sale: Sorry, No chargers.
Best REASONABLE Offer:

2 - MT1000 low band radios - 6 ch 42-50 with battery. Batterys seen to hold charge - I am conditioning now! Radios are MINT!! I can get programmed if needed.

3 - Icom F4S UHF portables - no addtl info known - battery condition unknown, but held a charge for a few days. radios talk to each other - thats all i know! - Radio condition: scuffed cases.

1 -P1225 UHF 450-470 portable - 16 channels - battery seems ok. Radio case very good - has # 6266 engraved on front.

1 - JT1000 UHF 450-520 - Radio battery antenna only- I dont have the programming key - missing. I know it is keypad programmable from 440-520. Excellent shape!

1 - VHF HT1000 works well, case could use replacing. battery is pretty good.

1 - GM300 UHF 25 watt 16 channel - 438-470. Radio powers up but condition unknown. Radio only - no mic or 16 pin connector.

3 - HT600 VHF portables - No batterys. antennas are good.

1 - GP350 VHF portable. 16 channel - battery condition unknown.

*** All radios were working when taken from service. I have described them as best as I can. All radios are sold AS-IS. No warrenty expressed or implied. Please email me any questions or offers. Please be reasonable with all offers.

Thanks!!

2781. Wtd: Info on Park Air Electronics commercial scanner

Newsgroup: rec.radio.scanner
Date: 2002-02-17 12:01:48 UTC
From: vk2ua@yahoo.com
Message-ID: <3c6f9b71.47230282@news.zip.com.au>
Source record: 51951

Hi

I have a Park Air Electronics 19" rack mounted air band scanner (model 16 WSS 1) about 20 years old. It is still a great unit for scanning up to 8 channels with xtal control for each. I would like a manual (copy) or at least sufficient information so that I can calculate the xtal frequencies in the event I wish to operate the set elsewhere.

I live in Sydney and the unit has the major channels set for our international airport. The unit used to be owned by a major airline.

Emails to Park are unanswered, so I assume they have no info on this set.

Can anyone help?

Thanks

Simon B.

You are awfully late into this thread. The Radio Shack is hollow elements
that can easily break in assembly (I had one do that when hand assembling
it even with no tools) or the wind. The Diamond is solid elements and
several of us have used them in the air and wind for years.

2783. Live Scanner Broadcast Sched- Daytona 500 Race

Newsgroup: rec.radio.scanner
Date: 2002-02-17 13:03:17 UTC
From: GeorgeF <av8tor@licensed4fun.com>

Finally getting most of the bugs worked out of my Live Scanner
Broadcasting.

As of right now I'll be broadcasting Daytona Beach Air Traffic and its
very busy due to the race. Starting a few minutes before the race
starts (about 1300 EST) I'll be switching the broadcast to the NASCAR
Driver/Crew freqs. And if possible during the last lap I'll try to lock
in on the lead car.

Once the race is over I'll switch back to Daytona Beach Air Traffic. As
stated this morning by a controller "right after the race is over is our
worst time for air traffic!".

Being that I live less than 2 miles from the airport you'll be able to
hear all the aircraft while on the ground as well as the tower/approach
side of all comms.

You can use this URL for getting to the live broadcast:
http://www.MilAirComms.com/live_nascar.html

Have Fun!

Try seareching the SSTV sites. The older DOS programs used the data slicer
(known as a Hamcomm interface). One great place to start is K4ABT's pages.
If it isn't there it isn't anywhere.

Max

Parents who raise their kids to be responsible won't have to
worry about where they are. However, parents are ultimately
responsible for their kids' actions by law, and responsible
kids will make sure their parents know where they are and
with whom they are hanging around. That still doesn't mean
that the parents have to know every gritty detail of every
second. There is such a thing as moderation even in this
topic.

Obviously you didn't try very hard ..as ALL the info you need is
available within the first 5 listings and only 3 of the first 75
are dead ...! You truly ARE pathetic and lazy ..or perhaps just a
Troll judging from a Google / De-Ja search of your other posts. ALWAYS
exhaust your own searching resources before asking others to do your
work for you ...!! Yuck ....

YOU sir are the prime example of an ass. (and a
lazy one at that) A quick check (also in Google / De-Ja ,
but obviously WAY too much work for you) will reveal
that " I " have helped people for over a decade and am well
documented for it ..! YOU on the other hand have helped NO ONE
and appear to be a spamming troll , from your contributions .
(I'm NOT too lazy to look) Try to get a hint when people ARE being
nice to you. If suggesting that you have NOT tried to help yourself
adequately first , is being an asshole (as you claim , as if you had
the right to call anyone anything .... and you definitely DO NOT ..
as YOU have contributed NOTHING here) then YES ... thats
me , for sure. Wake up .... be a man. (if you are one)

Bob,
I have three of them. I love them for mobile use. There is no other scanner on the market with such a large easy to read display. For mobile use its nice to glance down and see where the last audio came from. I can't say enough about the display.
The frequency range is limited to a "normal" scanner range, meaning no military or TV bands. It does all other bands. There is no search capability so you will have to program in the 100 channels you want to listen to.
Using the scanner mobile its hard to judge intermod. Sometimes the radio will hang up on a freq but again, hard to tell whats causing it while you moving.
They are readily available from Dennis on Ebay. He sells them for about 100.00 bucks plus shipping. They are obviously used and came out of CHP vehicle where they have probably been since they were manufactured in 1989 or so.

P.S. ....

If you asked questions like ....

I've looked at the material in Google and yahoo ..but really don't
understand enough about slicers , can someone help me ...??

or

I've looked at the web info on slicers , ...2 level ..!! ..4 level
..! ... (it can be confusing to many people and is)
homemade ...!! factory made ....!! what are YOUR opinions and
experiences and what do I need to know ... ???

or any questions that show that you are infact trying to help yourself
(and NOT trolling for attention ... cuz you're mommy isn't here
dude) and in genuine need of help ..then that would be different.

Even a poorly disguised attempt would even be OK .... but YOUR
posts show NONE of this .... I'm actually giving you the benefit of
the
doubt (about not being a troll) by bothering to answer you at all
... and not just dropping you into the kill filter. I hope you don't
prove me wrong ...

Are we using our resources wisely as a society? In the final analysis,
law and order is a choice and we need to use our scarce, law enforcement
resources wisely. But they are wasted in this manner:

http://www.geocities.com/mobaster/victims.htm

Aren't we wasting the opportunity to enforce the law?

I found some software on the web, for the Yaesu VR-5000 communications receiver!

Anyone working with this?

Thanks,
Bill Crocker

Uniden Bearcat BC 100xl Scanner 4 Sale.

Technical Specifications:
16 channels
Priority, Delay, Lockout features
Search for new frequencies (lower and upper search limits)
Display light
Direct frequency entry keypad

Frequency coverage:
30-50 Mhz
118-174 Mhz
406-512 Mhz

The Uniden Bearcat BC 100xl is in good condition and works fine. The purchaser will need to provide their own AA Ni-Cad batteries (6). I have the original owners manual, carrying case, antenna, and charger. The selling price of $50.00 includes shipping costs within the continental United States.

Please email me direct if you are interested. Do not reply to this message.
My email address is: rbird2@peoplepc.com

Thank you,

Rodger

It might be good for getting $10-20 out of somebody's pocket if you put it on Ebay (who knows, maybe more!). It would make a good radio to leave in the storm cellar. It would make a good weather service radio.
I have a couple old 10 channel base radios. I leave one bouncing between Red Cross and Nuclear/Chemical Hazard cleanup freqs for the area, another one on the ESDA freqs for this and the next county. That way I don't have to run the "good" radio 24/7 when there's really nothing going on. When the old junkers go off, I know it's time to fire up the good radio and listen to all 400 channels.

I owned one for several years! Programming them is a pain, the intermod in a big city (Atlanta) eats you alive! But, on the plus side, the display is great! Big knobs and buttons on the radio. If I didn't live in the Metro Atlanta area, and it would do trunking and ctcss (hint to Uniden), I'd buy another one.

Message-ID: <a4pocn$25du3$1@ID-12493.news.dfncis.de>
Source record: 51982

Hello all,
I have had a Regency D310 for years and have lived with its technology of "no battery backup for power drops, just a capacitor." To my knowledge, this had never worked and with the age, I hate to keep it running 24/7. The least little power drop, it goes and we reprogram.
I have the manual but it doesn't have a schematic to find this "magic capacitor." Does anyone have any info on this capacitor, where it is in the circuit or how it can be modified so that I have a backup for the frequencies that are in memory.
Any help would be appreciated.
WH

Are you in an apartment? Does the 'standard design' for your area
include light dimmers? If your neighbor has one in their dining room,
that would explain mealtime interference.

>If this interference was shielded against, I wouldn't be able
>to get any reception at all! Cable is available in my neighborhood,

If you're not in an apartment, an outdoor antenna would probably help
a bit. You might try wandering around the neighborhood with the radio
to see how far the interference goes in each direction. That would
give you a better idea of where it's coming from.

I'm actually in a 4-plex, two up, two down, each with our own door.
The standard installation doesn't include light dimmers. It's
sort of back-to-back with another 4-plex, where I suspect that the
noise is coming from, but that whole other 4-plex is occupied
by family members, and there's this one guy who chased me away
when I simply went to ask if they were cooking something. The
other three occupants of my building, when I asked them, said
that they hadn't been cooking anything in the last few minutes.
So I want to call the FCC because the neighbors in the other
4-plex are assholes. Would the FCC send a crew out on a stake-
out? Those people also have a dog, which is against the apartment
rules, and I complained the landlady, and she claimed that she
had warned them, "Either the dog goes, or you go!" but that
damn dog is still there. I normally like dogs, but this thing
yips and yaps and howls and whines and makes all manner of
noise, which is especially disturbing in the summer, when I
like to open my windows. Maybe I should just let the stray
radiation implement The Darwin Effect on them.

Both are quite old and you will find these receivers only as surplus. If it has to be one of those (I had both of them) I would always go for AOR. If you have to decide between the actual models AR8200 and Yupi 9000 (I have both actually in use) also go for AOR as you will find the computer interface very valuable and in my experience the AOR beats the Yupi hands down when comes to reception quality.

Best regards
Howard

IMO The 2004, 2005, 2006 series may have been something in their time (mid 1980's). Easily modifiable, Wide range, Channel storage ability were all new to most scanner enthusiast. But as for myself I have found their sensitivity in comparison to other makers was disappointing. What's the deal with a scanner that can do all of what RS scanners can do if the sensitivity is limited?

I understand that those who swear by these models defend them by saying that they were manufactured for use in urban areas. If that's the case RS should have said that in their marketing.

I know I'm gonna catch hell for this but I'd by a Uniden over RS anyday, but as I said it's only "my" opinion!

Actually Ron, while most of eaton county is 162.2 it seems this delta
freqency uses DCS of 654.
Now, I'd say maybe it's a fluke in my reciever,(I have an Ft-50 that will
scan DCS and CTCSS) but it's also the only code that will allow my Icom
F21 Fire Radio to recieve them.
Any thoughts?

>experience with these receivers?
>

Yup:

Faster scanning
Better audio
All around great performer
Sometimes open to interference by other devices in the house.
No 30 KHz steps

AOR

Muddy audio
Slow scanning speed
More menu's to play around with
Decent receiver-- May be better than Yup, but has too many faults like
scan speed and poor audio.
In search mode, it takes a block of freq. out rather than the one
freq. you want to lock out.
PC controled.

If I had to choose one, I'd probably take the YUP because I like good
audio quality.

The 2006 was brilliant in its day, but like all the older RS scanners, it is now better confined to our memories and collectors homes, some die-hards still use them, but they are easily outperformed by nearly all the latest models available, if you try and compare one with some of todays top radio's, they come a very poor second

"Jon Van Allen" <jonvanallen@msn.com> wrote in message news:3C713F5C.E257EDF1@msn.com...
"The deal" is that Uniden scanners are so sensitive they have no selectivity. The 2004/5/6 series scanners have slightly reduced sensitivity so they didn't get blasted by intermod which has always been Uniden's big downfall. Even my two BC-780s gets blasted by intermod at my location near Salt Lake City to the point it is worthless for anything but trunktracking. Same for the BC-9000 and every other Uniden scanner I've owned in the last 30 years. No matter what the application, my GRE scanners flat outperform my Unidens. I use my Unidens only for trunking, GREs for everything else, especially searching.
Some people don't realize is the sensitivity in the Pros is plenty adequate. For every 1dB reduction in sensitivity, you realize nearly 3dB in intermod and image rejection! That's a more than fair tradeoff in my book. Take a look at the numbers, there isn't that much difference, yet the old urban myth crap still persists. I've owned nearly every GRE-made Pro series scanner and a lot of the Unidens.

A friend down the road from me lives near a cellular tower tried to use his Uniden BC245 on an external antenna. It got clobbered so bad with cellular images that it was totally useless. He tried two or three different GRE scanners and the trunked system he wanted to hear came in loud and clear with NO cell images on any of them. You tell me who has better front ends...

Can you (or somebody else) please refer me to the North Carolina statute that would make them "fascist" wrt scanner laws? The only law I'm aware of (at the state level) regarding scanners is that it's illegal to use a scanner to aid in committing a crime.

That would work but after 3 computers I have
misplaced the originals.

Most Software companies will charge you a
replacement media charge which is a fraction
of the original cost and you just have to show
proof of purchase. ICOM does not provide this
option unfortunately.

I FINALLY GOT A REPLACEMENT thanks to a
contributor out there.

Thanks for the suggestion,

Ed

Can't D/L service manuals..... Only OWNER's manuals.
The parts list that you can D/L will include the RSU# for
the Service Manual. The Service Manuals usually contain
an addendum to cover things like CPU changes etc.....

The 2002 catalog lists the yellow rechargeable battery holder for $6.99.
Part number is 940-0898 and it will probably have to be ordered. The stores
generally do not have 940-xxxx parts numbers on the shelf.

> Which of these two are better or are they both similar?

2 totally different concepts. The CE232 loads a scanner with frequencies and is not used to control operation of the radio. The OS456 adds computer control to the radio but when not in use allows the radio to be used in the regular mode. It does not load freqs into the radio for use without the computer.

If you want a way to log hits or use the computer to control the radio then the OS456 is for you.

If you want to load up your scanner for later use without the computer then you will want the CE232.

The OS456 is a cinch to install, it can be done in 20 minutes with no soldering. The CE232 is more complicated and requires soldering etc.

I have five UHF hts that are motorola made for Radio Shack.These are work style radios and work great.Two of them need replacement batteries which are dead.They are 7.5 volt batteries.I am asking $200.00 shiped in the USA.I also have a Motorola Radius SP-21 VHF that does multi channels.I will throw that one in also.It works great and uses the same batteries.I do have a dropin charger and two wall warts.No paperwork or boxes.
Email me or call 978-281-3359 use *82 in front of the number.I am interested in trades for particular police scanners.

I have for sale two Yaesu hts.One is the dualband FT-470 that comes with several batteries,charger,box and paperwork.This radio is in execelent shape and works flawlessly.Its a great radio for someone starting out,as its easy to program and work.I am asking $225.00 shipped in the USA.
The second is a Yaesu VX-5r triband that has box,manual and charger.This radio does mars/cap and freeband.It is a little finicky when in vfo mode but does work ok.I think it may be a bad solder joint with who ever done the mod to it.Anyway I am asking $225.00 for it shipped also.
I am looking for a Bearcat scanner,either the 3000 or the 9000 model which I would trade for one of these radios.I am also interested in the 1000 channel scanner that Radio Shack puts out.
Let me know what you may have that may interest me.(Triband mobiles etc?)
Email me or call 978-281-3359 dial *82 first.

I have for sale one Optoelectronics Xplorer Nearfield Receiver. Unit is in excellent condition and has seen little use. Will include Opto DB32 "stub" antenna. With original box, manual, telescoping whip antenna, PC download cable, software, and AC adapter. This is the newer Xplorer that also decodes LTR trunking ID's. It is cellular blocked. Battery pack is in excellent condition.

Reason for selling: Seeing virtually no use, liquidating for other radio purchases.

Price: $600.00 shipped UPS ground US only.

Payment Method: Pre-pay with U.S. POSTAL SERVICE MONEY ORDER ONLY!!! No substitutions, please!

Upon receipt of US Postal Service money order I will ship unit to you and will contact you with UPS tracking number.

For more information about this device, please check this link:

http://www.optoelectronics.com/xplorer.htm

Please contact me via e-mail if interested.

Thanks for reading.

2865. For Sale: PRO-2004 with HB-232 Interface/many modifications $300 shipped

Newsgroup: rec.radio.scanner
Date: 2002-02-19 02:58:38 UTC
From: kc1ua@scancapecod.net
Message-ID: <9b093b3c.0202181858.43985624@posting.google.com>
Source record: 51934
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.swap

Greetings,

I have a Realistic PRO-2004 scanner for sale. The following info describes it's condition, modifications, accompanying HB232 Interface, included items, and payment method. Photos of the package are available through the link at the bottom of this message. If you are interested after reading this long-winded message, please contact me at kc1ua@scancapecod.net. Thanks.

Condition
---
1. Case is in good condition. Some minor scratches.
2. Display is in good shape. Not as bright as day #1 but doing well.
3. An analog signal meter has been mounted on the lower left front of the radio. This eliminates the earphone jack.
4. A blue keypad overlay has been placed over the original yellow keypad. This overlay shows a 400 channel plan instead of the 300 on the original yellow.
5. Radio does use a 9 volt battery as memory backup. Care must be taken to replace this battery. I would recommend twice a year.

Modifications
---
1. Full coverage restoration.
2. Removal of power transformer to reduce heat issues, facilitate HB-232 interface components, as well as toggle switches mentioned in #4 mod below.
3. 300 to 400 channel modification.
4. Modification that creates 64 independent "banks" of 400 channels each. Controlled by toggle switches on rear of radio. Diagram for operation is included. It is not possible to scan across these banks, but 64 different configurations are possible.
5. Pushbutton switch on back of radio defeats keypad beep.
6. Discriminator tap (RCA jack).
7. Analog S-Meter mounted on front lower left. Eliminates earphone jack.
8. Radio did have problems with cold solder joints, which is common in this radio. They have been repaired.

HB-232 (a.k.a CE-232) Interface
---
1. Allows for computer control of PRO-2004 through supplied DOS software. Demo of Windows software is available for download from www.steaksandwich.com.

2. HB-232 Interface is mounted in a project box, 8" wide, 6" deep, and 3" high. Short DB25 connection from box to rear of PRO-2004. DB-9 connection from interface box to computer.
3. Supplied software is able to program radio and will display a "virtual" panel that controls radio's functions. Again, it is DOS based software. I would primarily recommend using it for programming/backup of memory banks. Many scripts that can make the HB-232 perform various functions are included.
4. It IS NOT imperative that you use this interface. The radio operates just fine standalone. However, it is included as part of the package for obvious reasons.

Included Items
---
1. Original manual.
2. Service manual.
3. Power supply is NOT included. You will need a 12V positive tip wall wort type supply. I would recommend one that handles about 1 AMP just to be on the safe side. I was powering the radio from a 12V power system in my shack. Transformer was removed as outlined above, so this radio DOES NOT have 120 VAC capability. Radio did not come with a wall wort type supply.
4. HB232 software and scripts burned on CD.
5. My support for your first days of operating this radio! I won't disappear on you.

Payment Method
---
1. $300. Will ship UPS Ground USA only on receipt of US POSTAL MONEY ORDER ONLY!
2. Shipping and insurance included in asking price.
3. I will provide you with a UPS tracking number when the radio is enroute.
4. Reason for selling - I am simply not using this setup any longer. It is sitting here doing nothing.

This is a unique setup. I would not recommend this setup for anyone looking for their first scanner, but the radio works fine as a standalone unit and/or with the HB-232 interface. Please contact me if you have any questions. Photos of the package are available at this link:

http://www.scancapecod.net/2004sale.html

Thanks for reading this saga!

We're a mutual aide neighbor to Delta, so it's in our preps for mutual
aide reasons. I could have called our radio provider for the info, but
since I'm trying out some new gear from a different vendor, not so sure
they would have been real happy releasing the info.
Fortunately, my ft-50 scans the tones, once I managed to get the idea in
my head.
Thanks to all for the help

Very close.

I received a warning from my ISP. The X-10 company complained to them
that my use of the internet was slowing down the propagation of their
pop-ups. They were particularly irate that I once let another window
cover theirs.

Calling all tech geeks...

Go to my page and look at my mod for my headphone output, there's a picture you need to see.

http://www.favorites.com/~robtaylor/Pro-93%20Modifications.htm

The red wire that's in place is the same as shorting out R138. It's also the same as sticking a knife between the BNC connector and the outer ring on the headphone connector. All this does is really boost the headphone jack output. You can actually hear an external speaker that's hooked up to it.

But will being connected to the BNC, part of the antenna, hinder the reception qualities of the radio? It's not gonna degrade the reception or anything, right? Is it an extra ground that might bugger something up? I'm not that smart with electronics, so I'm unsure. I live in a fringe area as it is, so my local trunking system is spotty. I don't need to be messing up the reception of my radio.

Thanks,

Rob in Salt Lake

2875. Yupi 7300 (was: Yupi or AOR?)

Thanks

>The 7100 is available brand new in numerous locations.
>As a first scanner it is brilliant.

so far most reactions were in favour of the Yupi 7100. How does the Yupi 7300 perform? The 7300 has the new 8.33 step for aero stations. Switzerland already uses the 8.33 spacing and other countries are expected to follow later this year.

I've located a website listing all of the frequencies for the area around Williamson County, TX. There are only 11 frequencies listed, but each separate channel has a trunking ID. I haven't had any experience scanning trunked frequencies yet, and have no idea what the trunking ID is. Also, once I figure that out, how does it work entering the frequency ID's into a Rat Shack PRO-26?

Thanks,

jaybird

Your life is not my fault.

The pro-26 is not a trunk tracking scanner.You could progam in the frequencies,but you would not be able to follow the conversation.The ID's are worthless with a pro-26 you can not enter them in.If you want to follow trunked systems I would suggest a new scanner.

If you can point me at the protocols used I can write some software. I
have done stuff for Garmin GPS and I have just ordered a bc245xlt so
will write somne software instead of paying the 60-bucks being asked.

I'll do a search on protocols and see what I can find.

Hi

I have a 7100. I like it a lot, although I wish it had a bandscope like
the 9000.

When I bought it, an article I read on the Strong Signals web site led
me to think the 7100 was a little better than the 9000 for HF. This
predates the MkII though so you might want to check again.

The audio quality is quite good for a portable with a relatively small
speaker.

The Yupi has SSB capability.

I like the leather case Javiation sells much more than the plastic one
Yupi makes for it. They were priced about the same.

Regards,

Mark

Right now in the market, if you want an scanner that can follow trunked conversations you can buy a RS or Uniden scanner. Oh an a Optoelectronics one but you need a computer. Ok, as more and more systems are using trunking conversations nowadays is almost useless to do scanning without a trunk tracker scanner. So my question is, WHY does companies like AOR, ALINCO and ICOM that make professional and very high quality scanner or receivers havent offered us yet a trunk tracker radio? Why do we have to get stucked between only RS or Uniden? Why?!

Hi,
yes! I have codes for most of the Sony range of mobile phones that will enable you to use a different sim in the phone other than the one that it is registered with.
They are £10.00 each, if you would like to send me a cheque or IMO I shall forward one to you depending on your model of phone.

>And many more
>Most say that the AOR 8000 has better reception than the 8200

Bandercom is a good company. IMO. the 7100 is a better deal than the
9000. It's (9000) not as good in the 400 range and is terrible in the
800 range. The 7100 doesn't have faults like this. The AOR sucks
because the audio is muddy and it's slower. I like the 8000 though.
The global delay on the Yup radios really sucks.

2900. Re: Trunk Tracking, why only RS or Uniden?

Good question, just think how a radio like the Icom R-2 would sale if they trunked and scanned conventinal at the same time.

I hope I'm not stating the obvious, but have you visitied Radio Shack's website? http://www.radioshack.com. They usually have manuals for everything that comes with manuals.... Just type in the model number of your scanner into the search box and you should find it.

> nuisance? Thanks!
> DeWayne KE9K

I like the 7100. The 9000 is cool but not worth the money for most
people IMO.
The delay sucks! The bandscope is only the cool feature that the 7100
lacks. BTW, the Yup 7100 has SSB. The 7100 lacks a 30KHz step if you
like cell.
Both have good audio.

The only one that I know of that was really free was PC895 and he seems to have pulled the plug on that unless he has just moved his web site. Radio Manager is a really good program that seemed to work much better than demos to other programs that I have tried and it is only 40.00. I intend to get it if I can ever find the time to play with my radios again.

If it is Digital Voice Privacy there is NO way to decode it. The code
changes so fast and constantly that unless you have the computer out of the
local police station you are out of luck.

Nice 3000, works great. All functions work perfect. Has OEM battery pak but ni-cads will need replacement (recommend Nickle Metal Hydride insert)
Slight wear on the BC-3000 logo on top of scanner. With AC charger/Adaptor.

$170 shipped

NEEDS:

New battery insert for exsisting pak ($26) various sources
Antenna, (OEM Uniden is marginal at best)
Manual-Downloadable from Uniden website.

Price is firm.

2914. Re: Duluth frequencies

Your best bet is to simply scan the marine frequencies. The pleasusre boats as well as the big ships use those frequencies when they are so close to the harbor.
I have done that many times and it can be interesting. If you hit a busy weekend day you will get alot of pleasure boat traffic.

Hi,

I've heard that the 2.4GHz GigaRange models use an analog 900MHz
transmitter in the handset.

What about the straight 900MHz models? Are they analog also?

I'd like to buy KX-TC1851B for about $80. Do you recommend something
else?

Thanks,
John

The Wavehawk became popular about 2 years ago when it went on
clearance for $89-$99. Many people including myself bought them up.
The radio is an excellent performer. It is also about the size of a
brick. Here is a review of the PC version, which is basically the same
radio with PC control.

If the innards are the same as the PC1, it is the best scanner I have owned.
Very sensitive, NO Intermod in NYC that I can find, great audio.
VERY hard to program, the PC version makes life a lot easier.

2935. Icom R2 vs Alinco X3

Newsgroup: rec.radio.scanner
Date: 2002-02-20 17:29:45 UTC
From: tucansam@whodis.org
Message-ID: <a50me9dom1@reader1.panix.com>
Source record: 51803

Hello all,

I found some discussion on this topic, but am still finding myself uncertain as to which product I want to buy. I'm looking for a very small scanner with very broad coverage. The Icom R2 and the Alinco X3 both seem to fit the bill. I just can't decide which one to buy. Does anyone have experience with both and, if so, which do you prefer and why?

Thanks.

Yes, the PC version is easier to program than doing it manually, but the Wavehawk software is the biggest piece of crap ever cobbled together by a human.

Icom unit is VERY popular. I love mine.

Alinco has inversion (UK ver) if you need that. Universal Radio sells theirs (w/o the inversion) for $250.00. I think Javiation (uk ver w/inversion) should run you bout $180.00

As far as the Icom unit. Try http://www.burghardt-amateur.com/ at $129.99

2944. Icom R2 US Version VS Unblocked Sensitivity

Newsgroup: rec.radio.scanner
Date: 2002-02-20 21:35:10 UTC
From: DeWayne <ke9k@mac.com>
Message-ID: <iEUc8.73242$Hu6.17358630@typhoon.neo.rr.com>
Source record: 51812
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,alt.radio.scanner,alt.radio.scanner.uk

I recently received the following info in an email. Can anyone confirm this info?

"However - a real good reason to buy the unblocked version is sensitivity in the 400 Mhz band. The US cell blocked version has been desensitised in the 400 Mhz band to reduce the intermod. Comparing a Canadian and two US versions side-by-side - same frequency (~490 Mhz WFM TV signal), same antenna, same location, same time shows the Canadian version to be far more sensitive. This is pretty common - Radio Shack did this to the later model PRO-26's when buyers found cell images in the 300 Mhz range. Then buyers figured out how to restore that sensitivity. I suspect that could be done on the US version of the R2..."

Source record: 51815

: Icom unit is VERY popular. I love mine.

: Alinco has inversion (UK ver) if you need that. Universal Radio sells theirs
: (w/o the inversion) for $250.00. I think Javiation (uk ver w/inversion)
: should run you bout $180.00

Thanks very much for the information and the site. I will be buying from them when it comes time. I
read a little it about inversion and was wondering just how useful it would actually be. The two
scanners are very close in size and in feature set, and in price. This makes it very hard to decide,
heh. They also both have gotten great review, further complicating the matter.

I wouldn't say "none whatsoever" but in my case it's barely noticeable. I haven't bothered to correct it because I hardly ever notice it. The only time I can really hear it is when listening to aircraft or other AM freq's.

I don't know what this person is trying to prove here, but, I did not post this part. I know what the proper info is, and the following is not. I don't know why you people go out to try an hurt people, but your just shit.

Anyhow, Like I was saying, all I wanted to do was to collect email addresses to try an promote things, I guess I'll just go back to the usual way an harder way an that is to find the proper style of web sites I am looking for and go to each one of them and invite the webmaster of those sites. I ain't out to cause shit here people, I was just looking for a little input.

Randy.

BTW, here is all the info. pertaining to the following post, in which case, this person just switched there email address with mine, now here is there info, but with my email address. How do I go about reporting them about abusing my email address: The NNTP Posting Host in the following, is not mine.

Randy

I would like to end this whole thread right now, but I just thought I would post what I could find on this person's IP. This is what I found from the deja.com site. If anyone can shed some light as to who this person was that was using my email address that would be great. In the following It does show a name of Pete Stephenson. Is this the person that owns that IP adress.

Your help would be great.

You're not going to believe this! My boss totally busted me
looking at P0RN, today at work!

Here's how it went down:
Someone sent me an email about this website

www.hardcore18.net/quix

I made sure no one was around, I thought I locked my door (thought
being the keyword here). I got to the 1st page, and damn there was
the hottest girl on the front, she looks like she just turned 18 an
hour ago. The tightest, most perfect body, pouty lips man, no lie,
she is the hottest girl I've seen online!

You don't believe me? Check her out your self at

www.hardcore18.net/quix trust me!

Anyway, my boss walked in as I was gawking at her, then he told me
to come into his office. He proceeded to tell me that he could fire
me right there on the spot! I started to stutter through an excuse
until he interrupted me.

He said, "this time I'll let it slide, on one condition. You must
send me the website that you were looking at, because that girl was
totally amazing!" I smiled and told him, www.hardcore18.net/quix

He gave me a box of tissues and told me to start locking my door!

If you don't want to hear about the other fantastic sites we have

I can not, owing to some measure of personal ignorance, comment on the total substance of this article. I can say, though, that you have beautifully captured the essence of how the world works. My compliments, indeed. It is so typical that commercial interests and technical ignorance often combine to deny us the fullest benefit of our tax dollars.

2962. Best Software For AR3000a ???

Newsgroup: rec.radio.scanner
Date: 2002-02-21 05:42:09 UTC
From: MadDogMcQ <tom.mcq@btinternet.com>
Message-ID: <a521bh$7n8$1@knossos.btinternet.com>
Source record: 51831

Forgetting price for a minute, what's the best control software for the A3000a ?

If you make a recommendation, could you say whether you actually bought the software or whether you're recommending it based on indirect experience of it.

Please try to include webpage links if you know them.

Many thanks for your help.

Regards,

TM.

I wish they could list scanning speeds. Both are PC programmable which is
almost neccessary in my opinion. I would try to NOT get a radio w/o it now.

Yes, Ted, I remember when "kids used to be kids, and life was easy".

I also remember NEVER reading in the newspapers about a childs
lifeless body being found after being kidnapped. Times have changed.
You can change with the times or suffer the consequences.

To be fair, though, I wonder if it has really increased that much, or if it only appears to have increased now that we get instant news and nobody's afraid to report the slightest thing (or benefit from a lawsuit from the slightest things)...

You gotta wonder, over the past centuries, just how many kids were molested or abused, but never reported it because they were too scared, or didn't realize it was wrong, or accepted it as part of growing up, ... stuff we'd never put up with today.

Pros and cons - regarding what? SW performance?
Scanner performance? Reliability? Features?

As for SW receiver: better buy Sony SW7600G (or similar)
- much cheaper and much better performance (however
it still has the one of the best HF performance among portable
scanners).

As for portable scanner: well designed, well built, many features,
good performance (but AR8200 MkII is better on UHF), very
easy to use. But: 2 sec fixed delay (can be only changed it to 4 sec),
no PC interface, heavy, doesn't track trunking. (And eats batteries,
but most of the scanners do that.)

I think I remember hearing something like that before. Icom and at least one more company hurt the performence of the cell blocked receivers instead of blocking them out the "right" way. If given a chance, I'll always get the import version rather than buy the crippled american version.

>I recently received the following info in an email. Can anyone confirm this

I've got an old Uniden Bearcat 590XLT, roughly 10 -12 years old.
It's lost all sound, from both internal & external speakers.
Still picking signals, just no sound.
Now not being an expert, I presume the Pot for the volume has failed.
Is replacement an option, are replacements available?
Is it worth repairing or should I just scrap it?
Could it be something else?

Cheers,
Flingel.

Yes, as little as 40 years ago, even the most public officials like
the President could bring whores into the White House without anybody
raising an eyebrow... now he has trouble sneaking a little consential
number from an intern in the hallway.

> You gotta wonder, over the past centuries, just how many kids were
> molested or abused, but never reported it because they were too scared, or
> didn't realize it was wrong, or accepted it as part of growing up, ...
> stuff we'd never put up with today.

Yes, I agree with these points... crime is actually down all over the
nation compared to 10 or even 50 years ago. The public has been
programmed to "FREAK OUT" over any little incident. The reason that
these events are NEWS, is because they are so rare - if they happened
all the time, nobody would report on them, because the public wouldn't
pay attention to them... because they wouldn't be "sensational"... the
public craves "sensationalism".

With instant communications and sensationalism, things aren't getting
worse - they're actually getting better... it just APPEARS that things
are getting worse.

I used to work on those, under warranty.
They are not all that great a unit in actual fact.
Not bad, but far from the best of the time.
I wouldn't give more that $100.00 for one, if I wanted one.
Far better units out there now.

Greetings. I have a 1 week old 780xlt complete in the box with receipt purchased by me via mail order. Works as new and about an hour use. I don't understand trunking and would just like a regular base scanner. I will only consider a trade on a like new 2006 in the box with original antenna and manual. No other trades or the scanner is yours for $275 including shipping UPS in the US. I accept mo/checks (clear).

A better way of promoting your site,
than email spamming a bunch of people,
is to include a meta tag with keywords into your site,
so search engines will hit on it more readily.

If you mean voice inversion, yes. Ramsey (in Rochester, NY) sells a kit (I think it's the SS-70) that will un-invert it. If you modify it slightly with a potentiometer, you can adjust the frequency to decypher non-standard inversions, too.

I live in NC, and I am NOT aware of any State statute that makes listening
to any radio comms
illegal. Except, of course, for the Federal restriction on cellular
monitoring. There are no *Local* statutes I know of, either, and it isn't
illegal for an ordinary citizen to have a scanner in
his vehicle so long as he does not use what he hears for monetary gain, nor
reveals what he hears to 3rd parties, OR to evade capture while committing a
crime.

I have gone to Disneyland in Anaheim, Universal Studios (Burbank), Magic Mountain (Valencia), Knotts Berry Farm (Buena Park), Sea World (San Diego), Great America (San Jose) all with my scanner. I usually brought along an ear piece (ear phone) and either put the scanner in my pants or jacket pocket. I did not have any problem at any of the places noted.. made some interesting listing

Disneyland Security 464.325, 464.4625 (search 464.0 to 465.0)
Knotts Berry 462.1625, 151.655
Magic Mountain 154.54, 151.855, 461.4375
Sea World 156.70, 156.80, 464.4375, 464.2125, 151.515
Great America 490.1625, 466.25

If you teach your kids about everything then they won't step in doo-doo.
Most people don't do this. Kids control themselves, and if told the truth
from day one they do it much better than you ever could!

No, there aren't, that's mostly a television myth. But if you teach your
kids from day one the absolute truth about people and the world they will
do a much better job of taking care of themselves than you could ever do!

You teach them about sex by leaving your bedroom door open, and you explain
everything to them about what some people do and why they want to do that,
and you tell your kids how to not get fooled and dragged away, how not to
ever get taken to a second location where they get hurt or die.

Only kids whose parents don't teach them anything about sex are in danger!

Well RIch you have it all wrong the CE-232 does not only PROGRAM the scanner, but it gives you full computer control of the scanner and the memory that are in it, something the os456 will NOT DO!!!

I think you have the CE-232 mixed up with the Programmit, all it does is program the scanner and nothing else, thing is if you are going to modify the scanner for the programmit interface why not spend a little extra time and add the few more wires for the CE-232 and have a real computer controlled scanner!!!!!!!!!!

If you have the regular 400 channel scanner it will allow you to program all 400 channels, if you have upgraded it to 6,400 or 25,000 channels it will program all of them!!!!!
CE-232 will allow you to log and search and store.

For more info on what can be done with the CE-232 look here

http://www3.sympatico.ca/len.c/

Cheers

Len

If you use the os456 you have no control over your scanner or its memory, once the computer is disconnected you loose all channels that you had programmed, in fact when you shut down the software it reverts back to a regular scanner and what ever was programmed into its 400, 6,400 or 25,000 channels.

3007. North NJ scanning, state police

Newsgroup: rec.radio.scanner
Date: 2002-02-22 03:30:27 UTC
From: James Lee <jwl@superlink.net>
Message-ID: <3C75BB53.3F60@superlink.net>
Source record: 51773

Hope some one can help here.

Just got my BC7800 and I have been trying to track Troop B (North) of the NJ State Police. I have the scanner working just fine. At least until the control channel heads south. I have all 12 published frequencies entered and at times there is no hint of the control channel. A little later it comes back and the trunking works just fine. With the control channel missing, as I step through the frequencies, I do hear the normal communications (mostly state police).

Anyone out side NJ, this system is the Motorola Type IIii Hybrid Smartnet.

Makes me think there is another frequency that this system is using that the control channel hops to, since I don't have it in my bank, the 780 never locks on to it.

Is it possible that if the radios out in the field loose the control channel they retain the same operating parameters??

If any one has any similar experiences or knows a fix or work around I'd appreciate anything you can send my way.

Jim

There are really only 14 radio channels on your FRS radio.

"Privacy codes" set the tone of a small hum sound that gets inserted with your voice when you talk on your FRS radio.

Privacy codes have been used in the professional radio industry for many years. Privacy codes are also called "sub audible tones", Continous Tone Coded Squelch System (CTCSS) and Private Line (PL).

Explained in simple terms the transmitter sends a very low frequency hum along with your voice. Each privacy code (1-38) causes a slightly different frequency of hum to be included with your voice when you talk, except for code 00 which turns the tone circuit completely off. If you set the privacy code on both your radios between 1 and 38 and listen carefully to one while transmitting with the other you should be able to hear the low hum. for you techies out there the hum frequency is between 60 and 250 Hertz (cycles per second) depending on which privacy code you set.

Your FRS radio will listen only for signals with the the correct tone for the privacy code you dialed in (except privacy code 00). If you set the radio to privacy code 00 then the hum detector is turned off and the radio will hear ALL the codes.

So... if you let your children use your FRS radios then I would recommend you pick a privacy code other than 00 for your children to use. That way other people on the channel will only have a one in thirty eight chance of being on the right privacy code to talk to your children. This is assuming that they are smart enough have their radio set to privacy code 00 so their radio is hearing everyone using any privacy code.

As was suggested in a previous post, You as the parent should also listen to your children's use of the radio, but do it using privacy code 00. You will hear your children eventhough they are on another code that you have selected but only you (not your children) will hear everyone else on the channel. If someone else tries to talk to your children you will hear it and your children most likely will not unless the stranger knows the privacy code your children are using which is not very likely. Tell your children never to announce any personal information (or the privacy code they are using) over the radio.

An S-meter is short for Signal Strength Meter which is a common circuit on professional grade radios. It gives you an approximate idea of received signal strength so, yes, as you move closer to the person who is talking the S-meter will tell you but I wouldn't worry too much. It only works while you are actually talking on the radio and when you get within about one city

block to the person talking then the signal strength becomes so strong that the s-meter usually goes "off scale high" so someone will have a difficult time pinpointing the exact house your children are in. Directional antennas can also be used to find the location of an FRS radio but they are complicated and difficult to use (and it only works while the person is actually pushing the talk button on the radio).

Hope this information helps you get more fun and enjoyment from your FRS radios.

Craig

Source record: 51778

I have a DX-398 that is about six months old, padded case, original box, manuals, and power cord adapter. I would like to trade this for a euro version unblocked Yaesu VR-500. I am looking for a better scanner and hopefully you are looking for a better portable SW receiver. If you are interested email me at frequent_listener at hotmail dot com. I would also consider a BC780 with some cash from me as well.

Thanks,

Chris N

I guess if we had any idea what a CC&R was, we'd already know about the petition.

Can I send a petition over the radio through my TV antenna?
That way they'd get my gripe, and I'd get to use my antenna.

Here is a one month old Radio Shack PRO-2067 500 channel MULTI-SYSTEM trnking mobile scanner. I took it out of the box plugged it into power for a few hours and returned it to its box. This is a moble scanner, and comes complete with all the mounting hardware, box manual, mounting bracket. Never been installed. Looks 100% works the same. Sells new at Radio Shack for $249.99. My price is $200.00 shipped. Thanks Patrick K8CMA. k8cma@arrl.net

>decypher non-standard inversions, too.

Ramsey's and most other units divide down something like a color burst crystal. You cannot adjust the frequency on the Ramsey unit unless they have changed it in the last year or so, which I doubt. You might get lucky, but probably not. The Ramsey and most similar units will talk to each other since they are on the same injection frequency, but it would purely be luck if any of the cheap kits decoded simple inversion transmitted from anything other than a unit identical to the one trying to decode. The kits are crystal controlled at a fixed frequency and you can't vary them enough to make a difference.

It is possible and not too difficult to make an RC oscillator so you can vary the injection frequency, but it is difficult to make them stable over long term, temperature changes, etc. It could be done with proper design, but I'd leave a pot on the front panel with a knob just to be safe.

The nicest one I've personally played with was sold by Capri, but discontinued probably fifteen years ago.

There is a fellow who posts a link on some of these scanner sites periodically about a kit or something he sells. I took a look at it once and it seemed to be a fairly decent unit. If I needed an inversion unscrambler, I'd go to him.

And I am not related to the fellow, never communicated with him, don't even have his site bookmarked. He has no idea who I am.

Another thought might be to get one of the boards from Midian or whoever (NOT Transcrypt, I think they are a joke) and use the dip switches or whatever to get as close as you can to whatever injection frequency your locals use. Typically the injection frequency is 3000-3300 cycles.

I did want to make the point which often is mentioned incorrectly, that the Ramsey inversion scrambler/unscrambler kit is crystal

controlled, not adjustable, and would be a crap shoot whether it would unscramble your local inversion encoded transmissions.

I am just wondering what the going rate would be for a Radio Shack 200Ch. Pro-2037 Base Radio to sell. I might look at possibly selling it or trading in for a better scanner prefferably one that has trunking capabilities.

The rate would have to be $$Canadian of course. Excellent radio and has done me great for a number of years, I am just at the point of stepping up a bit in scanners. I still have the box and manual that came with it when I bought it brand new. I think the price when I bought it was around $299 Canadian.

And if I did look at a possible trade, what would be a good choice to get in return that has PL/CTCSS and EDACS trunking.

Source record: 51789

After actually reading the wording of the measure here, it seems to me that it was set up (and amended a number of times) to protect and preserve the consumer's right to television reception by prohibiting restrictions on antenna installation for television reception in areas previously restrictive in their allowance of such equipment.
I fail to see where this somehow changes the status of the amateur operator,SWL, or scanning enthusiast as regards the current state of CC&R's.
I personally abhor most CC&R restrictions as being unduly limiting, and therefore when purchasing a dwelling I chose to stay away from such associations... but they also serve purposes that in most cases the benefits of which cannot be ignored.
The measure allows for reception of non-video signals, such as voice and data, which is a loophole for someone worried enough about it to complain.
But antenna restrictions are essentially the same as they ever were, at least as regards homeowners associations and CC&Rs. This particular law and its set of ammendments doesn't change this status in the least, beyond prohibiting such HAs or CC&Rs from banning TV dishes and antennas.
The bottom line is, you should know going into any community what is expected and allowed, and what is not.
The concept that attaching a non-TV receiver to your otherwise legal TV antenna makes you a criminal is a bit of a stretch. Even if technically true, I fail to see how this somehow is new, or is any more of a threat to our hobby than any other set of restrictive laws which already command far more attention and place far more undue stripping of personal freedoms where radio is concerned.
I don't want to seem crude, but this type of non-enforceable ruling is a bit like the storied anti-oral sex laws... who's to know, who's to enforce, who's ever complained?
If you want to fight against the general trend toward banning certain types of radio reception, believe me I'm all for it. But battling private restrictions in the realm of private ownership and community agreement, particularly with non-verifiable names (sorry, without street addresses and/or some other verifying data the signatories have no weight or impact) is neither the most efficient nor the most effective place to start.
My opinion of course. I applaud your concern... it is only your method with which I take issue.
Linus

Before you go, I just wanted to warn you about putting other people's info online. An email address is one thing. Digging up personal info and posting it online is a whole different thing.

Your phone number could be posted here easily too. It ends with *2055*. You shouldn't post other people's private info here if you don't want your own phone # posted here too. Get it, spammer?

BTW: My ARIN record has a PO box and an old work phone that I no longer use. Go ahead and post it if you want, but someone might post your entire phone number if you do just to show you how it feels.

Is it possible to program a motorola radio to follow a trunks system
just like a trunktracker scanner?

Here is my situation:
i have a 800mhz visar and i also have a trunk tracker at home. I want
to program my visar so it does the same thing as my uniden scanner. i
dont want to talk on the system but just listen and follow the radio
traffic.

thanks

Not that I know of. There are some third party scanning packages here
and there (not sure if there is one for the R7100), but nowhere near
as powerful. WinRadio rules. IMHO, Icom should license their software
from WinRadio. (Or just buy the company ;-).

I am also considering a UBC 3000xlt. I notice the battery pack can be expensive. Any of you have experience with this radio. Is it worth $260 new? I notice it's extremely fast compared to my Icom R2. What else is worth considering? Thanks!

[snip]

So you feel this law interferes with the property rights of the CC&Rs
and their members? And the law should be repealed? So that we will
no longer have the right to install TV antennas?

Do you understand what this law is for? It's to ensure that cable TV
companies do not wind up with monopolies in neighborhoods with
restrictive covenants or landlords. Without this law, if you wanted
TV in such places you could get only cable. No local broadcast,
unless rabbit ears were enough. No satellite. Or (and I've had this
happen personally) no antenna of your own, but you can pay the
landlord monthly to hook up to his.

From: Jim Mac Donald <jmacdon@mitre.org>
Message-ID: <3C763170.D62A5C84@mitre.org>
Source record: 51796

The ICOM IC R-2 will slowly search and display the CTCSS, but dose not do Digital tone
coded squelch. The BC 780 searches for both type tone codes slowly. RS PRO 92 PRO 2067 search and display both CTCSS and Digital tone coded squelch codes instantaneously. But
only allows 50 CTCSS tagged channels and 150 for Digital tone codes out of 500 CHs.
The RELM HS 200 MS 200 and Racing Electronics HS 2000 radios use both CTCSS and Digital tone coded squelch BUT will not search them out, If you do not know them they have to be sampled manually until the correct tone(can do all channels). opens squelch. They will all let the radio us tone codes or clear squelch (i.e. a channel with out a tone code enabled) the Uniden 760 with the tone board installed will not let you use
clear squelch when the tone board is engaged. The ARO Mkr 8200 may also have a add on
tone squelch board.
Better frequency directories and publications will have the tone code when know for

the frequencies listed.
The BC 780 and RS PRO 92 PRO 2067 are the way to go to find ALL the tone codes or if

they aren't using any codes or non standard codes. The PR- 92 and PRO- 2067 may display non standard tone codes and be able to use them!

Yes, I did sell it. I didn't use it at that time and didn't need it.
Actually I'm looking for comparisons with newer models as I'm not familiar
with most of them.

This is a very neat looking radio and a bit on the Rare side. I am looking
for the best offer over $250.00 It is a STONER PR-10 transceiver that works
on 10-11 meters. I was amazed how sensitive this radio was. The stations
just
boomed in. It has been checked out on both receive and transmit and is fully
operational. AM-USB-LSB multi speed scan, RIT control and a neat looking
digital display. I don't have any DC power cord or operating instructions
for this radio. The wood case is in good condition. Each side has a small
screw hole from a mobile mount. The up-down microphone works great! I would
rate this radio an 8 on a scale of 1-10. Please look at the pictures below.
Questions can be sent to roblonn@cox.net.

3041. Optoelectronics Frequency Finders

Newsgroup: rec.radio.scanner
Date: 2002-02-22 18:03:06 UTC
From: jimdpeters@aol.com
Message-ID: <20020222130306.17743.00000031@mb-fn.aol.com>
Source record: 51708

I'm thinking of buying the "Optoelectronics Micro Counter" one of the Techtoyz. Which leads me to the question . . . . I know the SCOUT has many more features but I'm only looking for something that will get me the frequency I'm hunting for. Is there a difference between the "Micro Counter" and the "Scout" as far as distance that each one will detect a signal, or are they pretty much the same?

Thanks . . . . .

Jim Peters
Portland, Oregon

3045. Re: North NJ scanning, state police

Newsgroup: rec.radio.scanner
Date: 2002-02-22 18:17:23 UTC
From: Walt Bertram <wbertram@optonline.net>
Message-ID: <3C768B32.151435F9@optonline.net>
Source record: 51712

The frequencies for NJSP Troop B North, as decoded by "Trunker", are:

c v856.4625,da,ffff,f44
v856.9625,ee,ffff,2efd
v857.4625,102,ffff,127a
dv857.9625,116,ffff,85b
v858.4625,12a,ffff,1681
dv858.9625,13e,ffff,39b
v859.4625,152,ffff,1f73
dv859.9625,166,ffff,e9
v860.4625,17a,ffff,5629
dv860.9625,18e,ffff,e5
v866.5625,26e,ffff,1ac1
v867.7625,29e,ffff,1bf4

The "d" frequencies are the 4 frequencies used for data, i.e.,the
control channels.

I know that where I live there is trunking systems BUT there is no way I can get any specific frequencies because in for my country there is no books like PoliceCall, etc,.
Ok, so, what do you suggest me? I have a Bearcat BC245XLT. While in normal mode I do a SEARCH I get a lot of frequencies, thats how I do my exploration. How can I hear all the TRUNKING CONVERSATIONS out there without having any frequency guide? Can I hear the conversation that are taking place in trunking systems while searching in normal mode or what am I supposed to do? Am I doomed? Thanks!

If the radio has scan ability then it would scan the talkgroups that are
programmed into your radio.

This is unenforceable and just a silly interpretation of the law. Nobody has time to sit outside your dwelling and try to determine what is hooked to your TV antenna (unless you are pirating FM). Now if you are trying to pass off a 20 meter beam or an 80 meter dipole as a "TV Antenna", you might be able to run afoul of this law. As far as anything hooked to an antenna that even vaguely resembles a TV antenna, you'd have to go 500 miles out of your way to get anyone to notice you were doing it, let alone to find anyone who would try and get you arrested for it.
It's still illegal for you to reveal what you hear on the scanner or the contents of a ham conversation. Unless you are using the information in the comission of a crime, a blackmail or publishing the information in a newspaper you'll never be prosecuted for it. It doesn't bother me a bit that "they" could throw me in jail for this. If the government gets to the point where they are using excuses this flimsy to arrest people, there will be plenty of company in the slammer. The fact is you can choose to not sign the agreement, not to buy in those areas.
It seems to me that if you want to have a nice big antenna farm the smart thing to do would be buy yourself a few acres in a rural setting where you won't bother anybody and they won't bother you. A lot cheaper too.
Just my 2 cents worth on why I'm not as excited about this as you are.

Oddly, I have a BC2500XLT also. The battery packs (BP2500) go
bad quickly because the voltage detect threshold of the radio is
too high, and it shuts down before the pack is discharged.

Repeated recharging of the pack and overcharging kill the
internal NiCad cells.

If you want to use the radio, the best solution is to replace
the internal cells with a drop-in "guts" pack with NiMH cells
that can be had for under $30 from companies like
"nicadlady.com" or "primecell.com".

Be advised though that the BC2500XLT has many performance
problems. I eventually put mine out of service and purchased a
UBC3000XLT (which peaked my interest in this thread), but
neither of these radios is very useful to me any more because
they are not trunk trackers.

3060. BC-780xlt signal stength bar behavior

Newsgroup: rec.radio.scanner
Date: 2002-02-22 23:17:00 UTC
From: Brad Steinman <bsteinman@core.com>
Message-ID: <3c76d177$0$15925$4c5ecdc7@news.erinet.com>
Source record: 51727

I've noticed that my BC780XLT will have the a few signal strength bars lit when sitting on various frequecies at ~155Mhz. All antennae and radio are in the same location.

Heres the situation: BC780XLT is in manual mode, tuned virtually any frequency from 25-512Mhz (. Speaker is squelched (though it doesn't have any effect on these symptoms)

Here's the facts:
1. There is no carrier on that frequency, peroid. I have verified it with other radios! Releasing squelch reveals normal static, not even a trace of carrier.
2. The number of signal strength bars varies by whichever antenna is connected to it. Results from 155.850.
a. RS version of the Grove Scantenna (20-044 - has elements for 800/900Mhz reception) - all bars lit constantly
b. RS Scanner Ground Plane (20-176) - moves between 3,4,5 bars lit, usually 4 bars
c. Homemade 1/4 wave Ground Plane inside apartment (tuned for ~850Mhz) - 4 bars
d. no antenna connected - 1 bar blinks intermittently
e. 50 ohm terminating resistor - 1 bar blinks intermittently, 2nd bars blinks even less frequently
3. Same as above except Attenuator activated.
a-c. All lose 1-2 strength bars.
d. no change.
e. normally no bars though the 1st bar flickers once every 10-30 seconds
4. I have confirmed that my residence the unhappy receipient of high RF levels of 930Mhz paging traffic. In fact, my PRO-2006, (when tuned to 159Mhz and having anything less than 3 layers of heavy aluminum foil encasing the entire unit) is overloaded by a particular transmitter on 929.6125Mhz. Of which the FCC license database has no record of within 25 miles..... I've spend quite a bit of time of this...even locating the likely location of the transmitter.
5. The signal strength bar effect only occurs on frequencies >512 Mhz. I have not found a >806Mhz frequency to exhibit this problem.
6. All of the modes NFM,FM,WFM,AM all exhibit the effect, except for in WFM you can subtract 1 bar.... to be expected.

Even though the BC780 is wisely not breaking the squelch (as there is no carrier on that frequency), I am wondering if the BC780 is somehow indicating how much 'undesirable' RF that it is currently dealing with (filtering,etc) in the IF Stages with the signal strengh bars. Or it could be a defect and/or a firmware bug. Has anyone else experienced this???????

p.s. Also, I am in the process of acquiring a Notch Filter for 930Mhz. I've found a company that will make a single cavity version for $155 (w/ 16db att) and a double cavity for $325.
http://www.microwavefilter.com/cable/narrowno.htm Anybody else have a good idea... pls drop me a line.... :)

Source record: 51729

Since you know some of the frequencies of that particular trunked system it should
be fairly easy to find the control channel by doing a limit search a few mhz wide around
those frequencies(the control channel has a steady data flow to it).

I don't know if the 245xlt has a control channel only mode, but if it does the easiest
thing is to take advantage of that mode so the scanner details all of the voice channels for you
and bingo you are following in trinked mode.

Another option is to tap the discriminator of the radio for use with a data slicer and
a computer program like trunker to display the details of your trunked system. You can then
key the info into your scanner. You have to find the control channel for this to work.

The last option is to find as many channels as possible doing a limit search and key them
into the scanner as you find them. Of course you also need the control channel for this.

Good luck

>It's lost all sound, from both internal & external speakers.
>Still picking signals, just no sound.
>Now not being an expert, I presume the Pot for the volume has failed.
>Is replacement an option, are replacements available?
>Is it worth repairing or should I just scrap it?
>Could it be something else?

More likely to be something else... headphone socket passthrough,
audio amp failure, squelch switching fault, discriminator failure etc.
Pots tend to go intermittant/scratchy over time and sudden failure is
rare (unless subjected to impact).

It may be worth getting a repair estimate - repair cost will depend on
the nature of the fault (and integrity of the person/outfit looking at
it).

3064. Frederick, MD Frequencies

Just moved to Frederick, MD. Can't find too many frequencies to scan.
Anyone have a list of frequencies for this area? (primarily
interested in State Police frequencies and anything elsethat may be
interesting)

Thanks!
I can be emailed at chrism99@adelphia.net

I have for sale the Fairmate HP-2000 scanner. This is an OEM version of the AOR AR1000. This is a 1000 channel, 500khz to 1.3 ghz CONTINUOUS receiver. Receives am, nbfm & wbfm. It comes with the box, manual, Hint manual, two antennas (one for vhf\uhf, the other for low-band & sw) and a vinyl case. Radio is in very good shape, 8.5 out of 10. $175 or best offer plus shipping.

Cross-posted to: alt.radio.scanner,rec.radio.scanner

Stopped off at Ham Radio Outlet today. They have an previously owned, ICOM R-7000, unblocked w/ tv adapter for $675.

I looked at it and it's an 8+ in the cosmetic department. They don't have a UHF/VHF antenna up, otherwise I would have asked for a listener demo.

Just thought you'd like to know...

3070. Disneyworld / Reedy Creek Freqs / talkgroups

Newsgroup: rec.radio.scanner

From: ejwatts@home.com
Message-ID: <3C7714E6.95648B5B@home.com>
Source record: 51736

Is it my imagination, do I have a problem with my Trunktracker, or has Disney /Reedy Creek
moved their talkgroups around? I don't hear Reedy Creek Fire at all anymore, and the
following security talkgroups have changed:

400-1 now 58672
400-2 now 58704
400-3 now 58736
400-4 now 58768
400-5 now 58800

All the housekeeping (300) Downtown Disney (500) and Construction (600) talkgroups are still where they were. I verified the fleet map programming, and
it is matches my records as:

0 S-3 1 S-3 2 S-11 3 S-11 4 S-4 5 S-11 6 S-4
7 S-0

Can anyone help me out on this? Any idea where Reedy Creek (Fire / Ambo) went?
THANKS!

NOT EVEN CLOSE! CC&R stands for Covenants, Conditions & Restrictions.
These are filed with property deeds and have nothing to do with neighborhood
associations. When you purchase property, it is up to YOU to research any
conditions by going to the courthouse where the property is defined (a
plat) and READ the deed restrictions. Anyone can enforce a CC&R, it doesn't
have to be a neighborhood association. However, neighborhood associations,
usually called Homeowners' Associations, can have their own set of rules or
"Architectural Standards" which only they can enforce.

As a homeowner, you are legally obligated to BOTH kinds of rules.

Don't bother. Scancat is a primitive piece of software that hasn't changed much since the early DOS versions in the early 90's. There are much better programs around, several of them freebies. Try

http://members.core.com/~parnass/

or look in your email for a copy of NRDWin. Hope you like it <g>.

Message-ID: <u7ee08d8bb1m38@corp.supernews.com>
Source record: 51742

Looking for anybody in the Calgary Alberta area that can help me out with some freqs for that city. I have a TrunkTracker, so trunked freqs are welcome as well.
I have already found some trunked freqs at:

http://trunktracker.com/states/canada.html#ab

&
http://home.att.net/~wwhitby/canada.htm

I have also been to the Canadian TAFL listings for any offerings there.

I am aware that Calgary City Police are using a digital system, therefore not listenable.
I am interested in any other freqs that you may have to offer.

Thanks in Advance
Peter

Ah, comes the weekend and the resident troll suffers from krauesening poisoning and vents himself of some incredible piece of racist horseshit crossposted to a bunch of groups with nothing in common.

Well, it must be Friday nite.

This question appears here often. There is a program called *MDTMON* or something similar which is supposed to work on some *old* MDT systems. Recent MDT systems appearently are encrytped and can't be decoded.

This info comes from the collected "wisdom" of the news groups, so take it for what that's worth. I think those of us who want to monitor MDT are out of luck. :(.

Yep, "IF" they didn't have anything to bitch about they wouldn't have
anything to say.

Point: When you buy those over priced scanners always expect to pay big
for accessories. If they don't get you now, they WILL get you later.

You know, there are these magical things called search engines. ;-)

I put "invert.zip" into yahoo's search window and found (after a
bit of surfing) this:

http://krasnodar.online.ru/hamradio/rw6at/1998/invert.zip

Hooking up to the PC is just as easy. Run a line from the scanner's
external speaker jack to your soundcard's line input. You will probably
have to build an attenuator to cut the signal down.

Just for the record, it isn't very clear, but the only part of any of the
above that I wrote was the one sentence about playing the stereo loud.
while the FCC is pretty dilligent on sending a crew right out to
investigate when it gets a complaint from a commercial broadcaster that a 1/4
watt pirate FM is stealing the commercial station's audience, they have no
staff for much of anything else.
Look what gets by on the CB and certain parts of the ham bands these
days. I'd tell you all about it but that would be a violation of the
Communications Act of 1934.

You'll probably won't have a problem in locking on an active channel in the system but it would be very difficult to follow the same conversation (one Talk Group) if the system is busy with multiple active talk groups.

It is best to find out what kind of MDT encoding is used on the system
you are going to try to monitor. It's WAY best to find out first
before knocking yourself out trying , only to waste 100s on manhours
for nothing.
Only MDTs with 4800 type encoding can still be monitored with
software available on the web. Most metro areas abandoned
this type of encoding years ago. There still are ,however , a few
remaining areas where it is used. (not L.A. , S.F. , NYC, Atlanta ,
Miami , Chicago, Denver , K.C. , and most large metro areas)
Occasionally you can find suitable equipment on eBay that will
do many modern types ... it often sells for the $1100 to $1800 range
used. (if it's less ..it's NOT going to do what you want.)
Be smart ... sniff around ..ask others ...find out first ...
you'll be glad you did.

K ....

Possibly yes, but it is difficult. System information is
confidentially maintained by Motorola for it's customers.
This information along with specific information on
your Serial numbered Visar (with appropriate options) is
assembled into a special programming file that is given only
to your Motorola dealer assigned to program only your radio.
Of course you must be authorized by the firm whose fleet
you want to listen to before this effort may be put into
motion.

In my experience, it is fairly intensive for all parties
concerned for just one radio. We have cracked jokes
about the cost of cracking such a file, because it would
far cheaper to hire someone to carry your scanner for you.

This kind of operation is considerably easier for Nextels,
but still requires fleet owner's authorization for billing on
your unit.

3097. PRO2066 for $39.99

Newsgroup: rec.radio.scanner
Date: 2002-02-23 19:30:48 UTC
From: NJSCAN <njscan@altavista.com>
Message-ID: <I5Sd8.43147$co1.7632099@news02.optonline.net>
Source record: 51665

I just discovered that Radio Shack slashed the price on their first trunking scanner, the PRO-2066 (20-195) to $39.99
Here in NJ, I had to call stores in 5 different districts and have them search the other stores on their computer. I finally found what appears to be the last one in NJ in the Englewood store. If you are reading this from the NYC metro area you are probably out of luck. RS stores in more rural areas may still have some.

Good luck!

From: Patrick Dickey <pdickey43@hotmail.com>
Message-ID: <u7fsdic1pfsa6b@corp.supernews.com>
Source record: 51667

hey there everyone,
I have an old Realistic Pro 2030 scanner, and am curious about how to modify it.. I'm not so much interested in getting the "cellular Frequencies" (realize that's a shock), but I do want to open it up between 174 and 380MHZ.. Currently, it has all of the channels between 30 and 174 (minus the FM radio stations), and then 380 to 512, and the 800 and 900 MHZ.. I want to get the areas that I'm missing out on if possible..
Any information will be greatly appreciated, and I do have a copy of the technical manual, so I can find the areas that you will be addressing..
Thanks again.
pat.

This is a very nice handheld scanner with excellent sensitivity. The scanner is in excellent condition and comes with the manual, AC Adaptor, Antenna and optional carrying case.
400 Channel Continuous Band Scanner. 25 MHz-1.3GHz. FEATURES: 400 Channel, High Performance Continuous Band Scanner, 20 Banks, 10 Priority Channels, Frequency Transfer, Automatic Store, Automatic Sorting, Speed Key, Delay Key, Channel Lockout
Key, and more. Step Key, Turbo Frequency Search, BRAND NEW BP-2500 1000mAh NiMH Rechargeable Battery Pack. (Excludes Cellular Frequencies.)

$250 including shipping to CONUS

Bob

This is a very neat looking radio and a bit on the Rare side. I am looking for the best offer over $200.00 It is a STONER PR-10 transceiver that works on 10 meters. I was amazed how sensitive this radio was. The stations just boomed in. It has been checked out on both receive and transmit and is fully operational. AM-USB-LSB multi speed scan, RIT control and a neat looking digital display. I don't have any DC power cord or operating instructions for this radio. The wood case is in good condition. Each side has a small screw hole from a mobile mount. The up-down microphone works great! I would rate this radio an 8 on a scale of 1-10. Please look at the pictures below. Questions can be sent to roblonn@cox.net.

Hi David...Additionally, the RS discone received poor performance reviews in the 30-50 mhz. range. The Diamond discone is a better product.
It is similar to the ICOM in construction and performance.

A correction...it is not the FCC that wants or does not want you to monitor cellular transmissions. It is the cellular phone lobby that was successful in lobbying Congress to pass the legislation. The FCC then takes whatever actions based upon federal law. We have the best money Congress can buy. Begin first by blaming the idiot voters who keep returning some of these jerks to Congress term after term.

i dont know who this dumb ass is...but "la raza" simply means "the race"
meaning the mexican race of people. it is also the name of a political
organisation comprised of mexican nationals and mexican americans,dedicated
to the imposition of their particular political views.some of these views
are not necessarily in step with the best interests of america.

You are correct. One of the major problems I have found with the search engines is that except two or three, the other search options basically are useless. Additionally, in my state, there are independent cities. The FCC does not recognize independent cities. It assumes that every city is located within a county. The FCC refuses to revise their data query searches to allow searching on city, city & frequency, etc. But they do introduce new often worthless search features. Additionally, sometimes a user found on one search option does not appear on a corresponding related search such as callsign to state and county, etc. Further, they cannot seem to standardize a format. Why are 2 to whatever submenu levels required to obtain detailed frequency information? Everything could be on one page.

Select the "IBFS" option and for EVERY frequency something like AT&T Violet appears. It is useless and serves no purchase except to confuse. Their servers also have a habit of crashing all too frequently. Finally, when the west coast users hit in the morning their time, you can see the longer query seek times when it is around noon on the east coast.

3110. W4UVV Virginia Frequency Directory Information

Newsgroup: rec.radio.scanner
Date: 2002-02-23 22:37:56 UTC
From: John Wilson <jwilson9@erols.com>
Message-ID: <3C7819C4.584E1C0A@erols.com>
Source record: 51678

Repost...ISP email server problems. Attached text file is virus free.

The W4UVV Virginia Frequency Directory 2002 edition is in its' 16th year of publication and now is available on CD ROM. The master file currently contains approximately, 101,000 listings for both private sector and government users. The directory does not exclude any "sensitive" frequencies such as surveillance, etc. Major services include but are not limited to: Public Service(Police, Fire, Rescue), Aviation, Business, Federal, Marine, Military, Press and Utilities. Among many past users have been three TV station news departments that use it as a "Bible" frequency/user reference some commercial two way radio businesses. The directory covers the frequency range 25-2,500 mhz. with some additional frequencies of interest below and above that frequency range. Some additional adjacent state frequency information such as federal and military and Press users in the DC/Maryland area are included. The directory, where known, also provides information as to the location of the control station for a remote site transmitter.

The W4UVV Virginia Frequency Directory was reviewed in the October, 2001 issue of Monitoring Times magazine under "Product Review".

File data record fields and information contained where known are: FREQ1(T or R or S or X(trunked output)), FREQ2(T or R or S or Y(trunked input)), SV(Service), CALL(Callsign), USER, CITY, COUNTY (or Independent City), LAT(Latitude), LON(Longitude), TAH(Total Antenna Height), R(Repeater),B(Base), M(Mobile), P(Portable), PL(CTSSC analog or digital) and CH(Channel). Master file sort sequence ascending: FREQ1(Major), FREQ2,(Intermediate 1), SV,(Intermediate 2), USER (Intermediate 3), CITY (Intermediate 4), COUNTY (Intermediate 4), LAT, (Intermediate 5), LON (Intermediate 5) and CH (Minor).

For MS DOS users, the Master File and file extract files Aviation, Business, Federal, Marine, Military, Press and Utilities are in DBASE3/DBASE4 format. Also in "dbf" format are file extracts for every county and independent city in Virginia. This new feature allows the user to customize a "local" frequency file for monitoring selected counties or cities. The "local" file can further be customized, for example, to delete paging or broadcast or other services or frequencies of non-interest.

For Win 95/98 and ME users, the aforementioned files, excluding the county/independent city extract files, are available in MS EXCEL and text formats. MS EXCEL can import DBASE3/DBASE4 format files for record data processing, editing and printing. Because MS EXCEL does not support front/back page printing but only one side printing, the use of a separate software file print program called CLICKBOOK2000 is highly recommended. Files are also provided in CLICKBOOK2000 format.

CLICKBOOK2000 is reasonably priced and available at <www.bluesquirrel.com>. Printed at 4 font, 160 records per page, the master file is approximately 1,120 pages. It is huge!

Now a few comments about the FCC database. News flash! It is not 100% accurate. Where errors are obvious, entries on the W4UVV VFD have been corrected. Additionaly, it does NOT allow the user to search by the name of an independent city except by a radius of entered latitude and longitude option. I have discussed this problem on more than one occasion with the FCC reps. Their response were arguments as to why they couldn't (read wouldn't} change the database query programs. The FCC ASSUMES that every city in the county is located within a county. This is not the situation in Virginia. This independent city status causes problems for license application filing. Often an independent city is listed in an adjoining county and this is not correct. To further muddy up things, actual off air monitoring of a number of licensees has disclosed that some are not using the frequency assigned for output, but as input. Some are licensed for repeater operation, but operate simplex. Others are operating on frequencies for which they were never licensed and some still operating without renewing their license.

In our opinion, the W4UVV VFD has no significant competition because no publication or frequency source comes close in providing the scope and detail of information provided in the W4UVV VFD. Did you say Police Call? Please! Police Call basically extracts FCC database information and depends upon individuals to submit corrections. Except rarely, does it tell you who the user is of a specific frequency? Does it tell you the analog or digital CTCSS tone? Does it tell you the Fire/Rescue station ids? Does it give you the latitude, longitude and total antenna height of the structure? Does it tell you where the remote transmitter and/or control site is located for an licensee? Can you tell who the users are of the "PW" bundled frequency assignments? Is it Fire? Rescue? Police? Utilities? Animal Control? Where known, the W4UVV VFD identifies them. You know the answers to those questions and it is "NO".

Within the past 3 months, off air monitoring has discovered two new analog in the clear federal users 24/7 on high VHF in state. Recently a surveillance body mike has been monitored on high VHF.

The W4UVV VFD is a dynamic document. Literally hundreds of hours have been spent updating this latest edition. The CD ROM files size is approximately 640 mbs! That is almost a FULL CD ROM of information! If you spent 10 seconds sight checking each record on the database currently at approximately 101,000 records, it would take you approximately 280 hours or 35 eight hour days or approximately one month and one week or approximately five weeks to view the entire file.

The W4UVV Virginia Frequency Directory is available for $75.00 which includes shipping via USPS. The CD ROM is shipped within 24 hours of order receipt of a cashier's check or USPS money order. Sorry no CODs or credit card purchases or refunds. Allow 5 work days for personal checks to clear. Include legibly the name and mailing address and telephone an/or or email

address in your order in case we need to contact you.

If you wish to purchase a copy of the W4UVV Virginia Frequency Directory, send an email to: <jwilson9@erols.com> for specific mail ordering information. Upon request, a copy of the "Readme1st.doc", "User's.doc" and "DBASE3instructions.doc" files will be emailed for your review prior to purchase.

This is a repost of how to adjust the S-Meter to a better response.

Hi,

A few days ago I asked for info on how to adjust the s-meter
senesitivity on my BC780XLT but go no response. I just dug
in and figured it out for myself and am sharing it with you. I found that
the way the s-meter was adjusted at the factory a bit
off. Any signal of any strength at all was full scale. Even when that signal
was far from full quieting. I felt that that made
the s-meter about worthless so went about finding how to adjust it.

To adjust the s-meter you need the following. 1) A phillips
screwdriver. 2) A small jewlers flat blade screwdriver. 3) A
constant carrier signal (I used a NOAA weather channel.) To begin, remove
the 4 screws holding the bottom cover. The speaker
wires are attached to the BACK of the cover so flip the cover over towards
the rear of the radio being careful not to break the
wires. Look towards the center of the circuit board for two large shielded
enclosures. At the junction of these enclosures are
two tiny pots labeled RT1 and RT4. RT1 adjusts the s-meter for narrow FM and
RT4 adjusts the meter for wide (broadcast) FM. Tune
your scanner to the STRONGEST weather broadcast in your area. Carefully
adjust RT1 so that the s-meter JUST reaches full scale.
Be careful to adjust the pot so that it JUST gives you a full scale reading
on a very strong signal. This will give you the most
usable range from the meter. That's it! You should find that the meter now
gives more meaningful readings!

One final note. The pots RT1 and RT4 are EXTREMELY TINY AND FRAGILE!
Use extreme care when adjusting them so you do not
break them.

3113. FCC databases

Newsgroup: rec.radio.scanner

Has the FCC database changed the ability of getting Police Frequencies?
The service code of PL is also missing. Local PD Freq's were easy to get
months ago. Any info?

Actually, the Congressmen and Senators just don't want anyone eavesdropping
as they call their mistresses and hookers on cell phones.

In Canada, as far as I know, it is still legal to listen in on cell,
cordless, etc as long as you don't tell another person what you heard.

>As a homeowner, you are legally obligated to BOTH kinds of rules.

It's a civil matter, not criminal.

And the covenants and homeowner's association rules have to be legal. There were (maybe still are) neighborhoods with covenants that specified racial restrictions on home ownership. Those rules are, of course, not enforcable.

The law allowing TV antennas simply outlaws rules that prohibit them. It's not a law prohibiting radio antennas: it's a law allowing the kind of antennas the purchasers of that law have an interest in.

Perhaps we need a petition for a law outlawing CC&R bans on other kinds of antennas. But I doubt if the monitoring and amateur radio community has the same resources (i.e., purchase & ownership of politicians) that the broadcast and satellite TV industries do.

It's the worst. You've been pointed to Win92, which is by far the
best. You might take a look at the software and cable pages at
www.pro-92.com (the hyphen in the URL is important) for more info.

Methinks you have blown this out of purportion a bit. Can you cite the
proposed law and exactly where in that law does it state that you can only
attach certain types of receivers to certain antennas?

Personally, I'd never want to hook up a SW receiver to a TV antenna, but
that's just me.

>Why can't a person put up an antenna for any purpose, instead of TV
>only?

Maybe because in SOME situations it's not allowed by the deed restrictions, and you should have known that going into it.
In other deeded communities, it may be PERFECTLY OKAY to put up other types of antennas. This law says NOTHING about the different kinds/levels of CC&R restrictions. You're REALLY confusing the intent to protect TV viewers, with some kind of 'banning' of non-TV reception.
PLEASE read the laws and see where you're not understanding the wording. I PROMISE you it's not the fascist law you're making it out to be.

I know of no one who has been forced to live in a deed restricted, CC&R
environment. If you are a radio buff you should consider these things
before buying just as you would select carpet or bathroom fixtures.

sounds to me like single use property restriction from the major commreical coprorations in america. The phone company wanted to raise rates dramaticlly when the internet started gaining force but the government and indipendent lobbist saw that it was too late to do that so now the phine comp. will add "special" high spped line for a cost, raise all phone line costs...Or maybe it could be likened to the water rights laws ot west . yoc an use it for that but it will cost you. Just a thought.

It's just another step in making listening to certian frequencies
illegal. Joe Goebbels would love the cell Fone laws (radio).
Do I listen? No. Do I have the equipment to listen, you bet. But the
law itself is anti-American. It is abhorent that an American can't
listen to the radio! The politicans who were bribed to pass these laws
should be stripped of there jobs.

law.

Probably referring to the federal preemption over existing CC&Rs that prohibit the installation of outdoor antennas. Yes, the preemption only applies to antennas designed to receive TV programming (satellite or direct) and internet data. It does not apply to antennas designed to receive AM broadcasting, FM broadcasting, short-wave, ham radio, or other services. It does not discriminate on the nature of the station received -- a short-wave antenna is not covered for either Radio Moscow or the Voice of America.

Note that the law prohibits your local zoning board or homeowners association from prohibiting you from installing such an antenna. It does not regulate YOUR conduct. If you do install your (non-covered) antenna you may be in violation of the local zoning law or homeowners CC&Rs, but you are not in any way in violation of the federal preemption law.

[I have mixed feelings on this subject. I have been a ham radio operator for almost 50 years, and would love to put up an effective outdoor antenna. But I live in a CC&R controlled area that prohibits it, and was at one time the (paid) enforcer of those CC&Rs. But I certainly wouldn't want my neighbor to put up a tri-band quad on a 75 foot tower.]

Speech Inversion is accomplished by mixing the speech spectrum (typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz constituting the speech inversion.

Radio Shack do a good Telescopic antenna which is good for RX 25 through to 1300MHz and for TX it is good for 144MHz, 220MHz and 440MHz... I picked up several on ebay for under £10... it is center loaded and you extend the sections according to which bands you're listening to... I have found it a good antenna as I live quite a bit outside any urban development and its working well in that its allowing me to hear all sorts of radio comms from the city itself. The Catalogue number us 20-006A, Hope you find this useful.

Best of luck to you and yours and good listening.

Regards
Danny

I'd agree, except if it was the only option open. Obvious a stock TV
antenna is
going to offer poor performance "as-is" for SW reception... But, if
someone were
to use the feedline (common mode) and antenna as a long-wire antenna it
might be
much better than an indoor wire antenna. Also, it would be fairly easy to
incorporate
a small active amplifier with a 36" element so the TV antenna could support
an active
antenna for BCB or SWL listening.

I did a stint as chairman of the architectural committee in my
neighborhood.

There was one dimbulb who insisted that TV antennas were not allowed,
even though the architectural rules specified that they required
approval - just like fences, decks, etc. Unlike outdoor clothes
dryers, which were prohibited.

(I'm still trying to figure out how banning clotheslines was a
totalitarian plot. But that's another story.)

Had anyone asked permission for a SW or amteur or scanner antenna, I
planned to advise them that they phrase the request as being for a
special TV antenna. Sorry to hear that the law has been tweaked so as
to close that loophole.

It's actually not the government. It's the builder of your
neighborhood, with enforcement by your neighbors. It amounts to a
contract you agreed to when you moved in.

The government has stepped in and said they can't ban TV antennas.
That law was bought and paid for by the broadcast and satellite TV
interests.

When you buy a house, you need to check out things like covenents and
arhitectural rules at the same time you're checking the schools,
neighborhood, airport flight tracks, etc. Just part of taking
responsibility for your own path through life.

Your local Radio Shack should have it for $10.

I agree that it works quite well. Obviously a bit
more clunky to use then one of the "super
duckies", but for the money it's fine.

3142. EMS frequency for East Cleveland?

Most, not all of you, have missed the boat entirely on the what a diversion from the antennas that Congress PROTECTED you to install in a CC&R would entail. You dummies who think it is "illegal" ie: "criminal" there is no hope for you, and it's a good thing that public defenders are around to defend nincompoops like you when you REALLY break a law defined under a US, State or municipal CRIMINAL CODE.

If a tenant or owner subject to a CC&R varied from the antennas protected by Congress (TV only) then the tenant or owner would be in violation of the CC&R and nothing else. That could allow the association charged with enforcing the CC&R to take leagl action (to the dummies, that does not mean criminal) to compel compliance, up to and sometimes including a court order to have the offending antenna(s) removed and lien against the tenant or owner to pay for same.

The only reasonable resolution of a tenant or owner wanting special relief from the bounds of this protection would be to ask for a waiver of the CC&R in their specific case, in a request made before the homeowner's association. That's called getting along with your neighbors, and a reasonable person usually succeeds there. If that doesn't make your boat float, tough, you don't belong around people and should move to your own private idaho.

They aren't saying you are breaking a federal law by listening to FM with
the TV antenna. They are only saying they won't come in and defend you from
someone enforcing a perfectly legal contract which you signed yourself. If you
were coerced into signing the contract, sue for that reason.
If you were honest in the way you word your original posts, you wouldn't
get so much arguement. You are misrepresenting the facts by suggesting the
Federal Government will arrest anyone or even search out violators under this

law. The burden of proving you are in violation of the CC&R's is entirely a civil matter and between you and the people whose contract you signed of your own free will.
The fact the government might, in the public interest, decide to lend aid to people who will fill out a form and say they are using their TV antenna for TV reception, that does not in any way shape or form constitute any penalty against anyone who would choose to say they were using their TV antenna for something else and therefore not gain the aid from the government.
This would be something like saying that because the government gives food stamps to people who will fill out a form showing their income is below a certain figure, that it is unfair that the government won't give food stamps to anyone who will NOT make such a representation about their income level. The government treats water wells differently from oil or gas wells. This is not a basis for a claim of discrimination simply because they treat different wells differently.
The fact is you are breaking no law with anything you do in violation of CC&R's, you are breaching a private contract you yourself signed. The law may intervene in aid to the holder of the contract enforcing it's terms, but any lawbreaking would be related to any resistance you raised against the peace officers involved in paper service, etc.
More power to you, I wish you good luck, but trying to claim the government has made anything illegal that wasn't illegal before is dishonest. Comparing it to Nazi radio regulations is downright silly.

Hi Guys,
Just to let you know there's a new website out and it's dedicated to owners (or potential owners) of the AR3000/a.

There are a couple of pages to finish off yet, but the bulk is ready for viewing. I would welcome any constructive criticism. If you have anything to add to the site, please drop a line to tom@ar3000.info and I'll include your submission on the site (as long as it benefits the community).

The URL is : www.ar3000.info

Hope you enjoy!

Southwest shall secede
from U.S., prof predicts
By Frank Zoretich
Tribune reporter

Charles Truxillo, a professor of Chicano studies at the University of New Mexico, suggests "Republica del Norte" would be a good name for a new, sovereign Hispanic nation he foresees straddling the current border between the United States and Mexico.

The Republic of the North -- he predicts its creation as "an inevitability" -- would include all of the present U.S. states of California, Arizona, New Mexico, Texas, plus southern Colorado."

Stretching from the Pacific to the Gulf of Mexico, it would also include the northern tier of current Mexican states: Baja California, Sonora, Chihuahua, Coahuila, Nuevo Leon and Tamaulipas.
Its capital would probably be Los Angeles.

Truxillo, 47, has said the new country should be brought into being "by any means necessary."
But in a recent interview at a coffee shop near the UNM campus, Truxillo said it was "unlikely" civil war would attend its birth.

Instead, he said, the creation of the Republic of the North will be accomplished by political process, by the "electoral pressure" of the future majority Hispanic population throughout the region rather than by violence.

"Not within the next 20 years but within 80 years," he said. "I may not live to see the Hispanic homeland, but by the end of the century my students' kids will live in it, sovereign and free."

Truxillo said it's his task to help develop a "cadre of intellectuals" to begin thinking about the practicalities of how the Republic of the North can become a reality.

In the past, of course, wars have erupted when states seceded from either parent nation -- including the U.S. Civil War to keep the South in the Union and, in Truxillo's quick description, "the Alamo and all that" when Texas declared itself independent of Mexico.

Truxillo said the U.S. Civil War settled the question of secession militarily but not in a legal sense. States do have the right to secede, he maintained, if -- as was untrue in the 1860s -- the rest of the country is willing to let them go.

Professors asked for comment in other departments at UNM were skeptical that politics alone would find a way to make his proposed new nation possible. But, they said, given 100 more years -- well, who can say for sure?

"How realistic is it? That's one of the key issues," Truxillo said. "It's not unfeasible as a premise -- and a realistic possibility when you consider global geopolitical trends. It could happen with the support of the U.S. government."

He listed a number of international developments that he said would have seemed "far-fetched in the 1950s," including the breakup of the Soviet Union, the breakup of Yugoslavia, the apparently imminent creation of an independent West Bank Palestinian state agreed to by Israel, and ballot-box separatist movements aimed at achieving a Quebec independent of Canada.

The "tide of history" is moving the U.S.-Mexico border region toward political autonomy, Truxillo said.

Why does he think there should be a new Hispanic republic?

It's an idea that has been suggested before. In the 1960s, during the height of Chicano activism, something similar -- a sovereign Hispanic homeland to be called Aztlan -- was proposed by Rudolfo Gonzales and others.

When Truxillo was 14, he first met Reies Lopez Tijerina, leader of a group of New Mexicans who seized the courthouse in Tierra Amarilla, the Rio Arriba county seat, in 1967. It was a protest against Spanish land grants being taken by the federal government and set aside for national forests.

In October, Truxillo was a speaker during a ceremony at UNM's Zimmerman Library honoring Tijerina when he contributed his personal archives to the library's Center for Southwest Research.

At the event attended by about 300 people, Truxillo said it was from Tijerina that he had learned "that I was a member of a people with a country that had been taken from them by war, a land that was our own by treaty."

He listed a number of Spanish and Mexican treaties dating back to 1494 and ending with the Treaty of Guadalupe Hidalgo in 1848, by which Mexico granted to the United States -- after the Mexican-American War -- possession of parts of what are now California, Arizona, Nevada, New Mexico, Colorado, Utah and Wyoming.

"None of the rights of the Treaty of Guadalupe Hidalgo were fulfilled," he told Tijerina. "None of the obligations were upheld. You told us this was our country, our patria, and that we should fight for our rights, that all colonized and exploited peoples should rise up in struggle for independence.

"We will one day be a majority and reclaim our birthright by any means necessary -- and we shouldn't shy away."

Truxillo's tone was more scholarly during the coffee-shop interview. He said New Mexico is the first "minority-majority state" in which Hispanics and Indians and other

minorities on a national level outnumber non-Hispanic whites.

(U.S. census estimates of New Mexico's 1998 population: 52 percent Hispanic, Indian, Black and Asian; 48 percent non-Hispanic white. The Hispanic population alone was estimated at 40.3 percent. The 2000 census is expected to provide more precise figures.)

Texas is likely to become the next minority-majority state, Truxillo said, adding Hispanics are already in the majority in the border regions of all the Southwest states, largely because of a long and continuing immigration from Mexico.

The "overwhelming bulk of Mexican immigrants are attracted by the American economic way of life," Truxillo said. "Not as attractive to them is the American cultural way of life, but they are willing to make the exchange of economic security for cultural anarchy."

Hispanics in the American Southwest "have been ruled by three empires, Spain, Mexico and the United States," Truxillo said. "Under all three systems, we have failed to achieve self-determination.

"Among native-born American Hispanics, there is the feeling that we are strangers in our own land," he continued. "We remain subordinated. We have a negative image of our own culture, created by the media. Self-loathing is a terrible form of oppression. The long history of oppression and subordination has to end. There has to be an alternative."

Truxillo, who describes himself as a Chicano, said he was born in Albuquerque. He attended public schools in Albuquerque and earned his undergraduate and graduate degrees from UNM, majoring in Latin American, borderlands and Asian history.

He was an assistant professor of history at New Mexico Highlands University from 1992 to 1997, but after being denied tenure there, he began teaching in the Chicano Studies Program at UNM where he is now a visiting professor on a year-to-year contract.

Truxillo said Hispanics who have achieved some positions of power or who are otherwise "enjoying the benefits of assimilation" are most likely to be in the vanguard of opposition to his concept of the Republic of the North.

"There will be the negative reaction, the tortured response of someone who thinks, 'Give me a break. I just want to go to Wal-Mart.' But the idea will seep into their consciousness, and cause an internal crisis, a pain of conscience, an internal dialogue as they ask themselves: 'Who am I in this system?'"

Along both sides of the U.S.-Mexico border "there is a growing fusion, a reviving of connections," Truxillo said. "Southwest Chicanos and Norte&#65533;o Mexicanos are becoming one people again."

The Universal M-400 is a self contained unit that can plug into the
speaker port of your radio or take a discriminator tap plug in. It decodes
the following modes.
Baudot, ASCII, Autor (sitor A and B), FEC-A, Swed-ARQ, FAX, ACARS, POCSAG,
Golay, CTCSS, DCS and DTMP.

It is in excellent cosmetic condition and works just fine.

Comes with the unit, power supply (a wall wart) and the manual

The firmware shows ver 2.01

Gosh yes, quite a while back. All the former P~ groups have been lumped into the PW - Public safety pool; so far, most new licenses are remaining in the old sub-bands (PP, PL, PF, PP, PH...).

The industrial freqs have been similarly consolidated into in "IG" Industrial Pool.

there are also a couple new search sites,
http://gullfoss2.fcc.gov/reports/index.cfm
and http://svartifoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts (an alternate to the old & overworked gullfoss site)

3160. pro93 scanner software

Newsgroup: rec.radio.scanner
Date: 2002-02-25 06:06:02 UTC
From: Richard Haugen <rhaugen@mlgc.com>
Message-ID: <6c084ce4cc2f2667434fa46d79f33a33.72723@mygate.mailgate.org>
Source record: 51628

I purchased a pro93 scanner from radio shack and SCANNER DATA LOADING
SOFTWARE. When I gonfigure my software it don't show the pro93. It only
shows the 76, 79, 89, 2016, 2017. So it don't do anything for me. Is
ther an upgrade or did I just get ripped off?

I have no argument that banning the listening of certain radio frequencies
is wrong, but the original argument was that this new law would prohibit you
from attaching a shortwave receiver to a TV antenna. I doubt such a
proposed law exists.

Yes, I'm sure it would, but I seriously doubt that the government will be beating down your door to see if you have a SW receiver hooked up to that antenna as opposed to a TV set. The original poster who started this thread has yet to give a cite or quote the passage in the proposed law that states that this is prohibited.

Simply take it back. It is not designed for the Pro-93.

Get Win93 from: http://www.starrsoft.com/freeware/Win93/index.html
Get a cable from Ebay by searching for: FA-126. It is a Casio Boss cable but works great with the Pro-93 and a few RS adapters.

The Win93 program is free courtesy of Don Starr. I gave him a donation for his efforts and urge anyone using it to do the same.
The cable via Ebay was $10.00 delivered.

WHAT ARE YOU TALKING ABOUT. The law is that you can put up an
antenna designed for TV reception regardless of whether it
violates the CC&Rs. Once you put up a TV antenna, you can use it for
whatever purpose you want -- subject to FCC regulations on interference.

Gee, just two here. One for the am/fm, one for the vhf/uhf dualband rig.
Oh wait, there's still the bottom end of a k-40 on the trunk too, should I
snap the antenna back on??..lol
On a side note, anyone ever check the resonance of a k-40 on 70cm?.. might
be my experiment for the day.

I wouldn't recommend that. It's a combination of a developmental
version of Radio Shack's software (nobody knows who released it) and a
mediocre download program. The good stuff is

http://www.starrsoft.com/freeware/Win93/index.html

which is very well written and well supported.

The correct cable for the 93 is the same as for the 92. Go to

http://www.pro-92.com/pcifcable.htm

for the whole rundown on cables. The Casio cable from Purple
Computing is the one to get if you don't want to build your own.

Howdy, Have been trying to locate a " service " manual for a Bearcat
BC 210XL scanner for quite awhile with no luck. Would like to buy,
borrow or copy a manual, any help would be appreciated. Thanks
Harold

3181. Re: how many antennas on your car

Newsgroup: rec.radio.scanner

I currently have 6 on my Nissan Pick'em up.. One on the front for the am/fm radio, one on the back bumper for my CB (hardly ever use it, put it on long before I got into ham). 4 on top, one a 2m whip, one a 10m hamstick, one 2m/440 antenna for my HT, and one for my scanner.

I also put my call sign on the rear sides of my camper shell and back bumper in 3 inch high stick on letters (sold for address markers in hardware stores).

Makes for some interesting conversations, and lets me talk about Ham to interested folks. Sort of a rolling advertisement.

73's,

Robert / N4IXT

I'm thinking of hooking up all 5 of my home computers together via a
Wireless Network. Wondering if anyone who has done this has noticed
the network causing Interference to HF, VHF or UHF?

Not that the program you are recommending isn't good, but I like the other much better.

It's laid out in a more organized manner in my opinion. Especially when it comnes to talkgroups.

Talkgroups have plenty of room. They are not stuck down in the corner as in the other version

Wireless is 2.4 spread spectrum.

I use a Lucent 128 bit wireless card with my PCR-1000 both connected to a notebook - Inspiron 8000. This then connects to an Airport base station modified with a gold card as well. That plugs into my hub. I have not noticed any interference but to say there is none is crazy, I just don't notice. I have 2 possibilities of interference, the PC and the cards. The PCR-1000 range is up to 1300 MHz.

IMHO of using ALL wireless. Just do wireless where you have to, do roaming laptops and where you are unable to install ethernet cable. 10/100 cards are much nicer to move large files around. Leave at least one port open to plug in a laptop for file maintenance and/or backup. I have everthing centered around a switch instead of a hub but I dont get much traffic on my network ;)

Time was terriblly long to xfer a large directory of MP3s wirelessly. I stopped the process and used the 10/100 port in the laptop finally. Hard wired is cheaper as well, but wireless has come way down. I bought moderately early in its introduction. I use the wireless cards strictly for watching TV and playing on the laptops at the same time. Using 10/100 hardwired is much better for LAN parties!

Look ma! No wires.

Thinking about it you have a point. The talkgroups ARE a major feature of the radio/programming.

I just like Win93 myself. Its easy for me to use. The author is VERY active in the yahoo group. He also makes modifications after listening to bug complaint or simply for better user interfacing. He is a great guy.

I don't talk this good about my brother!

Yep, worked right off the bat with the usual RS adapters. It has a 25 and 9 pin connector in the pc connector. Seems weird but I have yet to use the 25 pin side so no big deal. $10 with shipping and you can not beat that, unless you homeroll.

John
Go ahead and put it on Ebay and see if you get a better offer.If you don't,I will take the scanner for what we agreed on.After all I don't want to be taking advantage as some other people think on here.
So let me know if you don't sell it.You got my email.

Hello Terrence,

why do i have to do trunking?

I think i&#65533;m able receive analog trunked systems.

But it seems that the athlets ever use VHF-simplex-
radio&#65533;s.

Do you know more?

Mark

You can sniff with a linux box, but it takes about 4 GB of data (in some cases) to find the encryption key. I have my setup locked for MAC and a 128 bit key. Plus it is setup for only 2 IPs, mine and my wifes and I switch it on only when I use the laptops for roaming. There was a problem with 1st Gen of Airports having the caps drying out. So far for me no problem but then again I keep them off unless in use.

You can do it but it takes a little effort. ;)

Does anyone have the wiring diagram for the pc clone cable for the DJ-X3 scanner? I ordered the scanner but forgot to inquire about the cable.

Wayne

Hello to the group,

I have an Alinco DJ-X10 and it does a very good job for me however, I never see any comments on the groups about them. Also, I don't see any software for them. Is there a reason for this?

Bill, N5WO

says...
> what's to stop me from picking up my neighbor's wireless traffic.
>

Two things in my case.

First, 128 bit encryption of all traffic. This has no effect on the
already sluggish 5.5 Mbit/s unidirectional speed of 802.11b - no loss
due to time to process and encrypt the traffic.

Second, I block all mac addresses except for wireless adapters that I
own at my wireless access point.

I don't share! ;)

RULE # 1
Ask forgiveness - NOT permission!
As long as you are descrete you should not have any problems. BTW, most of the traffic is now on the 800 trunked system.. moreso in FL at WDW.

Cyberguys also has DB9 to USB adapters. However, getting the software to recognize your radio on the USB port, rather than on the serial is a challenge. I have tried that with my Bearcat 780XLT, using Trunkstar and have had no success.

Here is a one month old Radio Shack PRO-2067 500 channel MULTI-SYSTEM trnking mobile scanner. I took it out of the box plugged it into power for a few hours and returned it to its box. This is a moble scanner, and comes complete with all the mounting hardware, box manual, mounting bracket. Never been installed. Looks 100% works the same. Sells new at Radio Shack for $249.99. Make offer, or what you have to trade. Thanks Patrick K8CMA. k8cma@arrl.net

> I would like a user's opinion.

Not a user but I tried their demo 6 -7 months ago and it kept locking my pentium lll 750 with win98 up. I noticed that they no longer offer demo downloads.
It looks great and it could be that the demo it's self had problems.

I saw one with six on the centerline; my first thought was that it
looked like a porcupine with a mohawk.

I just have the one permanently mounted (NMO deadcenter in the roof)
for the dualband rig, plus a trunk mount for the scanner or HT; it's
there maybe 50% of the time. On the rare occasions when I want both
of those in addition to the mobile rig, I also have an MFJ 5"
magmount.

I have a PRO2022 and just had a look at the PC board around the audio amp stage. Assuming it is the audio stage at fault, I would check the brown wire running between CN2 and the volume control. Check for dry joints and the soldering at the volume pot and the base of CN2.

Check the power amp chip. It's a TDA1905. Gently push down on the board and see if there is an improvement. If so, this could mean a dry joint somewhere. Check the voltage rails on the chip. There is a lot of info on this chip available on the net, just do a search. It is a common audio amp, so it's cheap and easy to replace.

Good Luck!

I am selling my OptoCom scanner, manufactured by GRE for Opto, 100 channel.

I have the original manual and software. The receiver is a 9.5 out of 10, works beautiful. Do not have the original box. It is the latest revision firmware with bit banger. I think I also have Probe Version 5 that I can include, if I can find it.

I will sell for $375 shipped in the US or possibly swap to a medium format camera.

reply to nmar@earthlink.net, I don't spend much time in the newsgroups now.

:>HOw many antennas and what type are on your car, truck, or vehicle ??

Wow. In reading all the followups, I see that I am not insane. I was thinking about putting four
antennas on my vehicle. Well, *in* my vehicle, actually. Which is why I posted this followup... Do
you folks have alarms? Isn't ten antennas on your roof the same as blasting your $10,000 stereo in a
bad neighborhood? I am concerned that having antennas on my car advertises the contents and exposes
me to theft. Since I'm too cheap to put an alarm on a 87 Lebaron with a blue book of less than a
Whopper with cheese, I figured I'd mount the antennas I need inside the vehicle (behind tint) and
stash a magmount in the trunk for when I really need the height.

3237. Re: pro93 scanner software

Source record: 51505

I chose the layout of Win93 because the talkgroups for a
bank logically belong with the frequencies for that bank.
As with the pro93.exe app, Win93 displays one "sub-bank"
of talkgroups at a time. Win93 displays exactly the same
info for talkgroups as the other app, it just does it in
a smaller area.

If you expand the main window size, you can see all 20
talkgroup IDs for the current bank/sub-bank at once. "Stuck
down in the corner" or not, it's the same info as pro93.exe.

As far as "organized" goes, I really dislike pro93.exe's
display of the settings / lockouts for all of the search
ranges. It puts the lockouts on one page, with a jumble
of Atten, Delay, and Group On/Off settings on another.

Try turning on Weather Priority in your scanner, then
download to the PC (oh - you need a separate app for that!).
Load the resulting P93 file into pro93.exe :)

On my Windows 2000 machine, Task Manager tells me that
Win93 is using 2788 kB of memory, while pro93.exe is using
8168.

Hi Guys,
Not sure what you are wanting.
I supply a cable that plugs into USB and becomes a COM port.
Its for laptops with NO coms ports more to run PSK.
The coms port seems to be missing on newer range of laptops.
Is that what you are discussing. Maybe its not what I am thinking.

Try getting into severe wx spotting/observations (AKA "Storm Chasing", but it isn't, really) My next vehicle, a late model Chev. Ext. Cab SB (I'd have it now, but came down with the flu over the weekend) will have the following:

1 Dualband 144/440 ham antenna
2 Single band 144 ham antenna (for APRS)
3 Active GPS antenna
4 Commercial dual band antenna feeding VHF and UHF radios through a duplexor
5 1/4 wave antenna for NOAA weather radio
6 PCS (cellular) antenna
7 CB antenna
8 Austin Spectra antenna for scanner
9 Mobile TV antenna (looks like a flying saucer)

In addition, I may add a second 2M ham rig/antenna. And this doesn't count the broadcast AM/FM radio!

3244. Desktop scanner w/trunking, computer programing and Alpha-tags?

Newsgroup: rec.radio.scanner
Date: 2002-02-26 20:18:42 UTC
From: vhfradiobuff@aol.comspamsux
Message-ID: <20020226151842.21359.00000473@mb-ml.aol.com>
Source record: 51513

Can anyone recommend a desktop scanner that has at least 800mhz trunking (400/500mhz trunking would be nice too) with multiple trunking types, ability to be programmed by computer and can display alpha-numeric characters? The number of channels is not important, as long as there's at least 50 or so.

I am new to this group and have a specific application for a used or refurbed scanner: to listen to taxicab calls from the various companies in a specific locale.

Are these frequencies pretty much standard?

Can they be programmed into an inexpensive used/refurbed unit?

Any suggestions on source of supply besides Uniden refurbs and eBay for-sales?

cc: lon@athenet.net and I'll check back here shortly too.

It's the same radio - the base version of the Pro 93 HH. IIRC the Pro 93
is on sale only until 3/2 for 169.00, while the 2053 goes foraround
250.00.

You can get the RS Pro-2053 for $250. Motorola 1/2/hybrid, Edacs trunking.
RS has not released software for it yet and does not come with programming
cable either. You can get freeware off the internet and i think the pro-92
cable. 300 channels, alpha tags.
Freq range: 25-54, 108-174, 216-225, 406-512, 806-960 minus cell, 1240-1300.

Or get the Uniden BC780XLT for $350. Mot 1/2/hy, Edacs, LTR. 400/500/800/900
mhz trunking. It comes with programming cable but not software which you can
get off net. 500 channels, alpha tags. Private call receive capability
(Motorola and Edacs).
Freq range: 25-512, 806-956 minus cell, 1240-1300.

Depends on what you want to listen to. For local police/fire/EMS, an antenna on the scanner itself should be fine, be it a handheld with rubber duck or a base with screw in telescoping antenna.

Now all though, I live on the second floor of my apt. I tend to switch around from time to time with my antenna's. First off, I use the telescopic one, works fairly decent, I just have to move the scanner around in different spots sometimes, to pull in certain ch's.

Second, I tend to like the Cellular lookalike antenna from Radio Shack. Stick that on the window, close to your scanner or scanner room, and it works pretty decent. Actually I'm using that right now, and am pulling in stuff I didn't get with the telescopic. But then again, it's outside.

The third, is a small magnet mount on my window sill. Works decent, but probably will stick with the cellular lookalike.

The reason I like the cellular like antenna is the fact that it's small, it can stay in one place, and it's out of the way.

If you do use a magnet antenna, I would suggest putting it on your balcony. If you have one.

Now, if you're in a basement apt. and using a magnet mount, just stick it outside the basement window, so atleast it's outside. Another trick I tried before, when I lived in a basement apt. was to put the magnet mount on top of the fridge.

I hope this helps you out. This is all I can think of for now.

I live in an apartment and currently use a Scantenna mounted in the attic. For 800 mhz, the Max800 works really good. You can find it on Grove. I also experimented around with the Radioshack telescoping antenna and wrapped some antenna wire around it and strung it across the ceiling and had pretty good results.

Or get either the PRO-92 handheld or the PRO-2067 base unit. These
radios have all the features of the PRO-93/PRO-2053, PLUS, CTCSS/PL/DPL
capability and 500 channels.

They do a fine job on Motorols UHF-LO (470-512 MHz) trunking systems.

They do not, however, receive the CB frequencies as the PRO-93 does, if
that is important to you.

Just about ANY scanner will pick up the "traditional" taxicab frequencies in the VHF (152 & 157 MHz) and UHF (452/457 Mhz) bands; many cab companies, especially in large cities have gone to Nextel, which no scanner can receive, or to 800-band trunking, for which you would need a trunk-tracking scanner, such as the Uniden BC245, BC780XLT and several Radio Shack models.

I would strongly suggest a handheld model if you'll be using it while driving.

Why do you say that? Besides scanning standard public safety freqs in the 150's and 400's, I'd want to to trunk tracking for 500 mhz and 800 mhz systems locally. Any problems in these areas?

Well, I'd like a base unit to replace my Pro-90. PL really isn't important to me as I would probably just use the included telescoping antenna, so I wouldn't have to worry about receiving far off signals when conditions were enhanced. 500 channels is a bit excessive for me. My current 300 channel scanner probably isn't even half filled. What sort of price difference is there between the 2053 and 2067? How's the performance between the two?

We have reduced the price to $199 !!! Get one while they last.

We have a supply of Optoelectronics 3000A Plus Counters. A very special purchase allows us to offer Optoelectronics 3000APlus top of the line portable frequency counters that are absolutely brand new, complete with accessories, still in the original factory boxes!. See more details at the ebay auction link below. Go to this link for details on purchasing one - http://www.datadeliverydevices.com/opto.htm or you can email me (remove all CAPS from the email address)

The Optoelectronics website has all specs, details
and the pdf manual at http://www.optoelectronics.com/3000a.htm

3269. Digital Scanners and PDA's

Newsgroup: rec.radio.scanner
Date: 2002-02-27 03:38:47 UTC
From: "N. Hall" <no-email@no-email.com>
Message-ID: <bxYe8.5300$r5.889213@news1.epix.net>
Source record: 51538

From what I have read, the cost of digital scanners will be quite high by the time you buy the scanner and then the add-on card. I was wondering if anyone has seen or heard any consideration being given to produce a "Scanner Card" be it Compact Flash, PCMCIA, etc. for use in a Windows CE / Pocket PC based PDA such as a Compaq IPAQ or HP Jornada.

These PDA's can take expansion cards, and already have the necessary sound capabilities. I would think that someone could produce a card at a relatively low cost, and have all of the necessary Digital Support, Trunk-Tracking, Frequency Storage, etc. could be handled inexpensively by software running on the PDA. Not to mention the ease at which users could download updates for whatever the future of digital and trunked radio brings next.

Since the future of Hand-Held PC's is obviously looking very bright and probably within a few years everyone who has a PC today will have one of them, it seems like this would be a good thing for the scanner maufacturers to look at.

There is of course the other major benefit - instead of running around looking like a dork with a scanner, you will look like a cool dude with your handheld computer and earphone and nobody will know what you are listening to.

3270. Re: how many antennas on your car

Newsgroup: rec.radio.scanner

An alarm, and I live in a good neighborhood in a small city in Oklahoma, where we still know how to deal with "criminal offenders", AKA THIEVES. The last time I had anything stolen from my car(s) was in '76. When I mentioned to the deputy sheriff what a pain this was, his reply to me was "You still have your .357?". Case closed. I've since traded my .357 for a (barely) legal 12 GA, and my alarm activates my pager 30 seconds before it sounds an audible alarm.

As for antennas inside the car, apparently you don't need much range. Again, here in Oklahoma, I routinely have to monitor and/or communicate with stations 50 miles or more away

This works quite well for me. My wife and I are both hams and we work
undercover for the sheriff's department using our POV. I drive a Kia
Sportage with 2 dual-band antennas and a cell, (for the 800 2-way)
mounted in the inside rear hidden by the tinted glass. With hideaway
strobes, nothing shows :-)

hmm. I remember this on the group dewayne. As I mentioned before. My canadian model. I have not had any Cell images on my 400 - 500 Mhz band. My 2045 does. But this R2 doesn't. I know it has rf problems in a RF probed town. But Never had the Cell images yet on it. where I live now. with a external and a preamp. I tried to get the images. This didn't work. I dunno if they changed the sensitivity on it or what. but my other radios have that image problem. but not the canadian R2.

That's a great idea!
They really ought, as well, to make scanners more like PDAs. NO more hold button 3 and 8 down while turning on the scanner, Just pick an option from the menu on screen. Who want to remember the instruction book. Just have it all on screen including a nice help file.

I think your idea is great I am dying for a Handspring.

I purchased my R2 from Atlantic Ham Radio in Toronto almost 3-years ago. It has worked great with no problems ever since. No problems at the border, via regular mail, but that was before 9/11, and the cellphone band works awesome. I can pick up signals on the R2 that the modified Pro-43 doesn't even see. I have noticed some intermod problems in the 450-460mhz range but I'm in an area that has an abundance of signals in that range. Once I get out of my area, there doesn't appear to be any problems. Once you get used to its odd function buttons, its a very neat receiver. I also got the computer program so I can program the channels with my keyboard. Sure makes entering channels and banks a lot easier.

Only the PRO-94A will do both trunked and conventional at the same time.
Look for an"'A"
at the end of the catalog number printed on the FCC plate. This is a
version of Uniden's BC 245 XLT.The early PRO-94s will not do
conventional and trunk ant same time.

Do you get funny looks going down the highway? Don't you just need one for
HF and one for VHF/UHF?

Now this begs the question of what applies to the Ham operator since alot of VHF/UHF HT's are wide-band recieve and are getting more and more memory channels?

I wonder how that would apply to them, or even FRS/MURS/GMRS/CB users?

Just some thoughts...

>(400/500mhz trunking would be nice too) with multiple trunking types, ability
>to be programmed by computer and can display alpha-numeric characters? The
>number of channels is not important, as long as there's at least 50 or so.

Andy,

If you want to go top of the line, get the Uniden BC780. It does it all. I use
a RS Pro-2052. 1000 channels, follows Mot 800(Type 1 &2) MOT UHF and EDACS.
Alpha tags w/computer control software. I got the 2052 on sale for $169.00 I
didn't want to get the 780 because Toms River will be going digital soon so I
wanted
to wait for a digital scanner before going top of the line. Good Luck.

3287. FS: Optoelectronics Xplorer Nearfield Receiver w/DB32 Antenna Reduced $520 shipped.

Newsgroup: rec.radio.scanner
Date: 2002-02-27 16:52:39 UTC
From: kc1ua@scancapecod.net
Message-ID: <9b093b3c.0202270852.706c9ad9@posting.google.com>
Source record: 51456
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.swap

Judging by what I've seen around the 'net I originally overpriced this, so I'm re-issuing it at a reduced rate.

I have for sale one Optoelectronics Xplorer Nearfield Receiver. Unit is in excellent condition and has seen little use. Will include Opto DB32 "stub" antenna. With original box, manual, telescoping whip antenna, PC download cable, software, and AC adapter. This is the newer Xplorer that also decodes LTR trunking ID's. It is cellular blocked. Battery pack is in excellent condition.

Reason for selling: Seeing virtually no use, liquidating for other radio purchases.

Price: $520.00 shipped UPS ground US only.

Payment Method: Pre-pay with U.S. POSTAL SERVICE MONEY ORDER ONLY!!! No substitutions, please!

Upon receipt of US Postal Service money order I will ship unit to you and will contact you with UPS tracking number.

For more information about this device, please click on the link below. Please contact me via e-mail if interested.

http://www.optoelectronics.com/xplorer.htm

Thanks for reading.

3288. FS: PRO-2004/HB232 package Reduced to $260.00 shipped.

Newsgroup: rec.radio.scanner
Date: 2002-02-27 16:55:29 UTC
From: kc1ua@scancapecod.net
Message-ID: <9b093b3c.0202270855.294f88c@posting.google.com>
Source record: 51457
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.swap

Greetings,

I can't move this package, so I've reduced the price to $260 shipped.

I have a Realistic PRO-2004 scanner for sale. The following info describes it's condition, modifications, accompanying HB232 Interface, included items, and payment method. Photos of the package are available through the link at the bottom of this message. If you are interested after reading this long-winded message, please contact me at kc1ua@scancapecod.net. Thanks.

Condition
---
1. Case is in good condition. Some minor scratches. Top of case has tape marks from a
2. Display is in good shape. Not as bright as day #1 but doing well.
3. An analog signal meter has been mounted on the lower left front of the radio. This eliminates the earphone jack.
4. A blue keypad overlay has been placed over the original yellow keypad. This overlay shows a 400 channel plan instead of the 300 on the original yellow.
5. Radio does use a 9 volt battery as memory backup. Care must be taken to replace this battery. I would recommend twice a year.

Modifications
---
1. Full coverage restoration.
2. Removal of power transformer to reduce heat issues, facilitate HB-232 interface components, as well as toggle switches mentioned in #4 mod below.
3. 300 to 400 channel modification.
4. Modification that creates 64 independent "banks" of 400 channels each. Controlled by toggle switches on rear of radio. Diagram for operation is included. It is not possible to scan across these banks, but 64 different configurations are possible.
5. Pushbutton switch on back of radio defeats keypad beep.
6. Discriminator tap (RCA jack).
7. Analog S-Meter mounted on front lower left. Eliminates earphone jack.
8. Radio did have problems with cold solder joints, which is common in this radio. They have been repaired.

HB-232 (a.k.a CE-232) Interface
---
1. Allows for computer control of PRO-2004 through supplied DOS

software. Demo of Windows software is available for download from www.steaksandwich.com.
2. HB-232 Interface is mounted in a project box, 8" wide, 6" deep, and 3" high. Short DB25 connection from box to rear of PRO-2004. DB-9 connection from interface box to computer.
3. Supplied software is able to program radio and will display a "virtual" panel that controls radio's functions. Again, it is DOS based software. I would primarily recommend using it for programming/backup of memory banks. Many scripts that can make the HB-232 perform various functions are included.
4. It IS NOT imperative that you use this interface. The radio operates just fine standalone. However, it is included as part of the package for obvious reasons.

Included Items
---
1. Original manual.
2. Service manual.
3. Power supply is NOT included. You will need a 12V positive tip wall wort type supply. I would recommend one that handles about 1 AMP just to be on the safe side. I was powering the radio from a 12V power system in my shack. Transformer was removed as outlined above, so this radio DOES NOT have 120 VAC capability. Radio did not come with a wall wort type supply.
4. HB232 software and scripts on disk.
5. My e-mail support for your first days of operating this radio! I won't disappear on you.

Payment Method
---
1. $260. Will ship UPS Ground USA only on receipt of US POSTAL MONEY ORDER ONLY!
2. Shipping and insurance included in asking price.
3. I will provide you with a UPS tracking number when the radio is enroute.
4. Reason for selling - I am simply not using this setup any longer. It is sitting here doing nothing.

This is a unique setup. I would not recommend this setup for anyone looking for their first scanner, but the radio works fine as a standalone unit and/or with the HB-232 interface. Please contact me if you have any questions. Photos of the package are available at the link below.

The scanner's not hard, about anything less than 30 years old will do . You'll find cabs anywhere from low band to UHF conventional, to trunking & Nextel, in the ham & marine bands or FRS/LMRS freqs. It's the "encryption" that's hard to beat. How many languages do you speak? In a city of any size you'll find a dozen different languages in use by cab drivers & their dispatchers.

You could try a mobile mag mount on an air conditioner, radiator, or
refrigerator. Or tape a wire dipole onto a window pane. Some folks have
used amplified "rabbit ears" designed for TVs.

alarms have dropped lots. If you install it yourself. Way cheaper again. Fairly basic to install too. If you have patience of drilling small holes and such.

hmm, I haven't seen ce-232 chips lately is it a chip so you can interface a computer comport to a radio or anything else external. I know of a ce-232 interface. only 232's I have seen lately are MAX232 chips. but. I probably wrong that they are what you are looking for. I will look further. I am stocked on the MAX232 type chips. but. I have to find out if the CE-232's are the same.

As a realitive newcomer to this hobby, any assistance provided from you good folks would be appreciated.

I recently purchased a Radio Shack Pro-93 scanner, and I am confused as to what cable to use to interface the scanner with my PC. I have seen conflicting accounts on various websites, and I thought I would go here and ask the real experts.

Once again, any help is greatly appreciated.

(...)

http://www.pro93.com/

Consider the two way cable which allows uploads/downloads,and the correct adapter is included with the purchase.

3303. Help selecting scanner for very specific purpose

Newsgroup: rec.radio.scanner

Source record: 51472

Thanks for responding,

I am a newbie with a special problem. I fly remote controlled sailplanes. Some, including the radio equipment cost over $2500.00. Lately, planes at our flying field are getting glitched, swamped by outside interference. So far, none of the crashes have hurt anyone. (Except for their pocketbook.)

The interference is sporatic and intermittent. Finding the culprit is going to be difficult. Obviously, I need a scanner, one that will scan the Remote control frequencies. Because of the nature of the problem I also need a scanner that will keep a history and allow me to view the history in a graph showing the full spectrum of remote control frequencies and their signal strength. I've already figured that I need a computer controlled scanner. I already have a laptop. I need help selecting a scanner and software. Any suggestions?

Thanks I advance for your response.

The cable for the PRO-93 is exactly the same as the cable for the
PRO-92.

http://www.pro-92.com/pcifcable.htm

has information on buying or building a cable. Skip the GRE cable,
since that's part of a bundle with software for the 92.

For software for the PRO-93, get Don Starr's "Win93" from

http://www.starrsoft.com/freeware/Win93/index.html

Anything that Don has on his page about software or cables for the 93,
or posts in the Yahoo discussion board :

http://groups.yahoo.com/group/PRO-93

should be taken as gospel.

Probably a dried out electrolytic capacitor somewhere-try bridging each one(one at a time with a good one(it does not have to be the correct value-but use common sense)-the voltage needs to be the same or higher though.
start around the volume control, and work from there.
As old as the 2022 is, odds are that you will find a capacitor, that when bridged, will make the scanner much louder...when you find it, replace it with the right value.
NOTE:these are the capacitors that look like little metal cans with plastic jackets on them.
The other types of capacitors in the unit are unlikely to be bad.
Also note that the capacitors that you are checking have a polarity-if you reverse them, they short and fail.
So make sure when bridging them, make sure that you match the polarity.

Hears where I herd of this PRO-92 tone code programming limit :

<http://www.strongsignals.net/access/reviews/reviews.cgi?type=display&rtype=fi&class=recv&num=018#PL>

I may have misinterpreted what is meant I. E. there are 50 PL and 100 (150) DPL tones available for programing
and what is not mentioned is programmed in ANY of THE 500 channels in conventional mode. If you can program all of the 500 channels in a PRO-92 and PRP-2067 with tone codes, then I stand corrected, and am glade to know this!

As an avid scanner enthusiast and amateur radio operator I've had many
radios in WDW. I've never been challanged, though I've always been discrete.
I can tell you that FRS radios are very common so as long as you don't
flaunt the fact that you are listening to them I suspect you'll have no
problems.

I can tell you that Knottsberry Farm in CA has a very agressive "no scanner"
policy.

Good luck!

For high band you could use a ground-plane
hung in the closet. RatShak has one cut for
high band. Cat# 20-176 I think. It's less than
$20. You have to bend the radials down to
a 45deg angle to get it to load up on the 2meter
band. I have also used a regular pair of "back of set"
TV rabbit ears. The kind that fit into a hole in the back
of small 13" TV's work best. Just remove the twin-lead
and solder on some RG-8X and you have an adjustable
dipole. Just mount it vertically.

Dear Linda and Daryl,

Just got off the phone with Aunt Patty and everything went very well. The surgery took a little over an hour and she was back home by late afternoon. The doctor told her the worst part will be getting the muscles back in shape when the cast comes off. She has a full cast, up to her knee so that foot will be immobile for eight more weeks, plus the tendon snapped the day before Thanksgiving so the muscles are pretty well atrophied.

Her only request is that you two don't feel compelled to get one of your feet in a cast so that we can take another family photo of "The Cast Bunch".. I agree.

Love,

Dad

Hi, Sherman -

I've forwarded your question to a couple scanner and ham email groups. What frequency range are we talking about? Many RC radios operate as "secondary" users who must accept co-channel interference. But perhaps intentional interference would be prohibited if that's what you're thinking.

You might take a look at this site "while you wait":

http://www.clede.com/Articles/Police/radioint.htm

You need a scanner that may have something like a bandscope showing surrounding freq activity. This would show a general amount of RF emissions surrounding the bands you use for RC freqs. How far apart (Mhz) are the different channels of the radios you use. I used to have a Great Planes Spirit but I haven't had that thing out in quite awhile...

I forgot the exact freqs, can you post them?

I use a Icom PCR-1000 with my laptop and a program called TalkPCR. It shows a moderate amount of surrounding freqencies but if it is stepped similar to cordless phone, that bandscope does not visually display enough to cover all the possible channels. I am suspecting an outside 'source' such as some kid playing and changing crystals untill he finds the one you are using during flight. You may even be able to 'hear' it is you program in the exact frequencies into a scanner and have it simply scan those frequencies and you would be able to tell activity. I would be suprised as well thinking that all he has to do is look at the channel flag on your antenna and simply plug that crystal into his radio. I figure that you do NOT fly near power lines or antennas so stray RF may NOT be a culprit. I would be more willing to say someone is transmitting on the RC freq and causing mayhem to your aircraft. I would do that first before looking for stray RF emission near the airfield. Is this area a park where FRS radios are being used?

Contact the AMA. Each district has Icom scanner(s) available for loan,
with complete instructions on how to use them to locate R/C
interference.

3331. Motorola Radius GP300 Help Required.

Newsgroup: rec.radio.scanner
Date: 2002-02-28 19:24:20 UTC
From: Bry <Bry@home.com>
Message-ID: <u7t0egpsdt4763@corp.supernews.com>
Source record: 51398

Hi there,
I hope I'm on the correct NG for this question, if I am not I apologize.
I recently inherited a few bits and bobs from a family friend who died.
Among them was a "Motorola Radius GP300". I presume it's a TX\RX walkie
talkie.
I have searched the internet for info on it but I have not found anything of
any real help.

I would really appreciate some information on this radio, such as
frequencies, channels, controls (i.e. which button/dial does what), range
etc.
Or a website that might have this sort of info.

As I only have one I suppose it isn't much use at the moment but if it turns
out to be any good then I will buy another one.

I would very much appreciate any help at all.
Thanks
Bry

3332. Am I missing a lot?

Newsgroup: rec.radio.scanner
Date: 2002-02-28 19:46:28 UTC
From: faive@hotmail.com
Message-ID: <305ca694.0202281146.4d2a9e47@posting.google.com>
Source record: 51400

I recently bought a BearCat BC245XLT. I dont like its cheap construction and feeling. The only reason I bought it was because of its multitrunking capabilities. I love this hobby so that its why everything I can hear I like it (from taxis to airplanes from police patrols to 900 mhz cordless phones). Im my country there is no restriction to hear anything you want.

I have seen in the market other scanners such as ALINCO (DJ-X3T, DJ-X10T, DJ-X2000T), AOR (AR8200), ICOM (R-2, R-10), YAESU (VR-500) but alas, they dont have trunk trackers capabilities.

Am I missing a lot not having those equipments and having a bc245xlt? Better reception, more sensitivity, more chances to explore (for instance, in 900mHz the bc2454xlt ONLY ALLOW 12.5 mhz steps), more features, more options?

What can you tell me please? I dont know if I should buy of these and sell the bc245xlt to my sister cos she want it!

Thanks!

Uses a Motorola 68HC11 microcontroller Try Digikey (www.digikey.com)
they
sell some of the 68HC11 family.

This is a business band walkie talkie. Not familiar with this specific
model, but most likely will reside in only one of the following bands,
vhf-lo, vhf-high, or uhf. It's programmable (through a dealer or serious
hobbyist) and there's probably little chance of telling exactly what's in
it from just looking.
If it has a model number, (look on the back under the belt clip or
battery)..some may be able to give you more specific facts.

I posted this about a week ago and received one reply (Thanks) That had neg. results, and then for some reason my posting disappeared. So here's my request again ---- looking for the "SERVICE" Mamuals for one or both the 210XL & the 210XW. Bearcat Uniden doesn't have them and neither does a half dozen other places I've checked, so if someone has one or both I'll gladly buy them, copy or pay to have copied or what ever(there are limits) Thank You Harold

3340. The best telescopic antenna?

Newsgroup: rec.radio.scanner
Date: 2002-02-28 21:25:22 UTC
From: faive@hotmail.com
Message-ID: <305ca694.0202281325.629178ca@posting.google.com>
Source record: 51407

I know there is no "BEST ANTENNA" out there, BUT into the category of TELESCOPIC ANTENNAS which is the BEST and where can I buy it? I hear all frequencies and would like and overall improvement BUT would appreciate it more if there was a BIG improvement in the 900-956 mHZ band.
I use a Uniden BC245xlt with the stock rubber antenna.

Any help would be greatly appreciated.

Thanks.

Here is the virtual downconverter mod for the 2036.

--PART.BOUNDARY.0.23569.emout11.mail.aol.com.868620634
Content-ID: <0_23569_868620634@emout11.mail.aol.com.1846>
Content-type: text/plain;
name="MOD2036"
Content-Transfer-Encoding: quoted-printable

Pro 2036 can pick up cell in the 400-512 range with this mod. Find IC 11,
locate it on the bottom of the main board(where its pins come through).
Cut the trace between pin 7 and the base of Q17 and solder a wire to pin7
and base of Q17. Cut the trace between pin9 and the base of Q18. Solder a
wire to pin9 and the base of Q18. Then solder one more wire to pin8(ground).
You now need a dual pole dual throw switch (6 leads on the underside)
Solder the free wire ends in this order.

pin9 o o base of Q17

base Q18 o o pin7

N/C o o pin 8 (ground)

BACK OF SWITCH

o = switch legs
N/C=no connection

When the switch is connecting the top leads to the center leads all is normal.When you switch to the opposite connection or center leads to bottom leads the 800 BPF is hotwired on.When you search between 400-512 with the switch in the latter position the radio picks up cell.The step is off a little but alot is on there.

Do this at your own risk.I did it last night and listened for awhile to make sure it wasnt a fluke.There is about a 435 MHZ spread between what you hear and what the display reads.Enjoy
If you have concerns or questions e-mail me here on AOL.Ira

That's not been my experience. It is just the opposite. New public service licensees are lumped under "PW".

Hi,

I have a nrd 545 and the nrdwin software which controls the radio.

How do you load a number of memories from NRDWIN to the radio?

Thanks
Stuart

For ego, image, and to "maintain thier property value". I have no sympathy for them. They knew before they bought the whatever. If they didn't they are damned fool for not checking any covenants or ordinances before the fact.

Oops, I didn't say what I intended, did I. What I meant was that new licensees still seem to be getting FREQUENCIES that correspond to the old service groups. FDs are generally getting traditional fire freqs, PDs getting what were PP freqs, etc.
